Although successful in relieving the unpleasant symptoms of acid dyspepsia, alkalies must only be regarded as one element of the treatment. It is most unwise to believe that bicarbonate is the be-all and end-all of the control of this form of dyspepsia. This method is to a large extent palliative, and certain alterations are essential in the dietary to cope with the increased secretion of hydrochloric acid.

Reduce Starchy Foods

It is generally agreed that the amount of carbohydrade or starchy food should be diminished and the proteins and fats should be increased. Meat may be taken in reasonable quantities provided it is lightly cooked. It should be chewed very thoroughly by the teeth before being swallowed. If for any reason the sufferer is incapable of thorough mastication the meat may be finely minced or grated. The protein of the meat rapidly combines with the hydrochloric acid of the gastric juices, and so diminishes the possibilities of its ill effects. Eggs and white boiled fish may also be taken freely.

Fatty foods, butter, cream, olive oil, milk are also recommended, as fats tend to have an inhibitory action on the secretory activity of the stomach glands. Fresh green vegetables can be eaten in reasonable amounts, as also fresh fruits, provided they are well masticated. Condiments, sauces, pickles and spices should be rigorously avoided, as these stimulate the gastric secretion. Plenty of water should be drunk, especially between meals, but wines and spirits should be restricted, or better excluded altogether.

Exercise Combats Dyspepsia

Attention to the health of the mouth is essential. Sepsis in the teeth, gums or tonsils can have a most harmful effect upon digestion, and therefore, if there is any doubt on this matter, an expert should be consulted. It is highly desirable, too, that the dyspeptic should renew or maintain the physical recreations of earlier years, or at least should find some way of obtaining active open-air exercise. As has been emphasised already, the onset of acid dyspepsia frequently coincides with the relinquishing of energetic physical pastimes.

Then, on the psychological side, the dyspeptic sufferer must endeavour to cultivate a control over his "nerves". Irritability of mood can be conquered if one owns upto the fact of its existence and a deliberate effort is made to stabilise the emotions. Worry and anxiety will magnify any dyspeptic symptoms, and these in turn will increase the worry and anxiety. A vicious cycle is thus created, which must be broken if both the mental and physical symptoms are to be removed.

Symptoms Of Duodenal Ulcers

And now let us briefly turn our attention to the question of gastric and duodenal ulcers. It is well established that frequently, though not always, there is a long history of acid dyspepsia prior to the development of such ulcers. We have to bear in mind the adverse mechanical effects of the associated constipation, which lead to structural changes in the stomach and duodenum. The tissues of these organs are not to become streched and ultimately abraded, and the excess of acid completes the localised destruction of tissue.

What are the symptoms which are likely to give warning of the onset of a gastric or duodenal ulcer? In the first place there is usually a history of fairly long-standing dyspepsia. Then aching pain is felt in the stomach, coming on at a *fixed time after meals*, according to the situation of the ulcer. The taking of food increases the pain if the ulcer is in the stomach, while if it is in the duodenum the pain is diminished. Occasionally the pain is referred to the right shoulder blade. In the case of gastric ulcer the pain may be accompanied by vomiting, which generally relieves the pain. These attacks of pain last from a few weeks to months, but recur periodically, this intermittency being a characteristic sign. At any time, owing to the destructive effects of the ulcer, a blood vessel may be eroded, leading to bleeding, more or less severe, or the wall of the stomach or duodenum may perforate. These are dangers to be feared with such ulcers, and immediate skilled treatment is essential, otherwise the risks of life are grave.

Secure Medical Advice

If you experience stomach symptoms similar to those described do not delay in obtaining medical advice and guidance. It may not be, of course, that you are suffering from gastric or duodenal ulcer, but it is most important that the diagnosis should be established as soon as possible. Fortunately, by means of the X-rays, the doctor is able to satisfy himself on this point, for most ulcers are visible to the X-rays and can be accurately localised.

A remote but serious complication of gastric ulcer is the development of cancer in the site of a long-standing ulcer. It is the experience of surgeons that cancer of the stomach is frequently preceded by ulcer, and when we remember that stomach cancer is one of the most prevalent of all cancers the need for prevention of gastric ulcers is a matter for thought. Now stomach disorders are for the most part both avoidable and preventable, provided we observe the simple rules of hygiene and take immediate steps to control any symptoms as soon as they arise. The person who suffers dyspeptic symptoms which do not clear up rapidly under dietetic management should waste no time in having his case fully investigated by a doctor. In this way much needless suffering could be avoided and the possibility of serious disease averted.—*New Health.*

HEALTH & HYGIENE

KEEP YOUR HEAD COOL

Mr. M. K. Vaidiar in the course of an interesting article in the *Bombay Chronicle*, writes:—

THE story is told of an English physician, who has considered to be the foremost of all physicians of his time on account of his extensive medical practice and knowledge, that he buried the whole of his medical library and kept one book well bound and sealed with a will to open it after his death. All the doctors were eagerly waiting to know the contents of it. After his death the seal was removed and the book was opened. The book, it is said, contained nothing but blank pages, except one page with the following inscription:—

"Keep your head cool, warm your feet and laugh at the doctor." The story illustrates the importance of keeping one's head cool.

Some of our Anglicised young men and women are in the habit of condemning everything Eastern admiring and aping everything of the West in point of food, dress and mode of living, without considering our climate and surroundings.

A distinguished M.B., of Bombay once asked me what was the use of applying oil on the body and head and washing it away during bath. Instead, he opined, you might swallow as much fat and oil internally and supply the system with what is wanted. I regret to say that my friend failed to understand that our digestive organs can carry only a limited quantity of fat from the daily food we take. The extra fat taken not only will not help to promote the health of the body but will upset the digestive organs and produce indigestion and other ailments. All such extra fat taken will have to

be thrown away outside through the alimentary canal. India is a hot country and men perspire profusely and our system throws away a large quantity of oil from the oil glands every day along with perspiration. In England and other cold countries they seldom perspire and, therefore, there is no wastage of oil from the system.

FALLING OF HAIR

Normally each of the hairs in the head has a life of six months to four years, after which it falls out to be replaced by a new hair. A moderate amount of hair-shedding need, therefore, cause no alarm. The loss of hair is as a rule due to debility in some form or another. It is the nervous system that wants strengthening by proper tonic. If it is due to the weakening of the hair glands a local application of medicated oil will serve well, but if it is due to general weakness of the system, internal medicine is necessary. Congestion of blood vessels is also another cause. The women who suffer from suppressed menses are generally victims of looseness of hair.

The best medical explanation of baldness is that the sub-cutaneous fat stored in the scalp as a pad to protect the skull from external hurt and nourishment of the scalp, naturally in old age gets thinner and disappears. This scalp becomes more tightly attached to the skull, the hair follicles close up and vanish and baldness sets in on the top of the head where the skin is tightest. This may happen even in middle age due to diseased condition of the general system. The hereditary tendency may also induce premature baldness. Generally speaking there are two types of scalps, one being dry and the other oily. The dry scalp needs frequent shampoos; the oily scalp requires shampoos at least twice a week and certainly not less than once a week. Too much oil in the hair, in the case of an oily scalp tends to kill the hair, because insufficient air gets to the roots. Excessive dry scalp, particularly that which gives rise to dandruff, is under-nourished and may require a little oily treatment from time to time. By far the most important point in hair hygiene is that the scalp must be massaged with the finger tips as vigorously as you can, at least once every day, if you are troubled with falling of hair or baldness.

WATER WITH MEALS

This very old question about drinking water with meals still comes up occasionally. The use of water to wash down food because one hasn't patience to chew it is obviously a bad eating habit.

It is certainly much better to drink if thirst is indicated than it is to avoid water by deliberate rule and against one's indication of thirst.

Excess water passes very quickly from the stomach into the blood and under normal conditions is not likely to remain long enough in the stomach to interfere with digestion by "weakening the digestive juices."

The normal content of the stomach during digestion is quite liquified being between eighty and ninety per cent. water. Milk, fruits and vegetables have about this water content. Dry or more concentrated foods, especially starches and sugars, must draw water out of the blood until they reach about that proportion of water.

Therefore, a meal low in water content must draw water from the blood to digest it, which would "dry" the blood to that extent and make one thirsty. Thirst so caused should be quenched just as any other thirst.

Baked with the usual degree of excellence, and containing a high percentage of health giving Bourn-Vita, made from fresh full-cream milk from British farms, British Malt and E mpire Cocoa. Obtainable in the usual size tins or convenient air-tight packets.

Flexible Pavements*

Influences Affecting Present-Day Design

[By Bernard E. Gray, *Chief Engineer, The Asphalt Institute.*]

THERE have been several papers presented in recent years on the design of flexible pavements. These studies have taken up various aspects of the problem ranging from the design of paving mixtures themselves to formulae for stress distribution. While untreated gravel and stone layers are often thought of as flexible-type pavements, the modern conception includes only those which are mudless and dustless at all seasons of the year. Hence, this discussion will apply solely to the bituminous types of surfaces, with untreated gravel and stone considered only as foundation courses.

The matter of stress distribution will not be touched upon in this paper (1) because a great deal of what might be said has already been covered in previous papers, notably the one by Mr. Benkelman before the seventeenth annual meeting of the Highway Research Board in 1987, and (2) because there are other studies currently being carried on, one by Mr. Goldbeck and another by Professor Spangler. The Asphalt Institute contemplates a research beginning this coming year on still another phase of this study.

The design of flexible pavements, however, has been much influenced by a number of collateral factors which but recently have been taken into account and a brief discussion of some of them may be of interest. The so-called flexible types of pavement are, of course, our oldest pavements. They form to-day the larger portion of the highway system of the country. They are an ever-increasing percentage of the total highway mileage and the annual rate of construction is increasing rapidly. According to April, 1939, issue of *American Highways*, such surfaces number 176,818 miles out of a total of 274,880 miles of all-weather surfaces on the State system or 64 per cent.

In order to ascertain the trends of present construction practice a questionnaire was addressed to the State Highway Departments. The replies show that a very definite technique of foundation design is developing. The older practice of making heavier pavements to care for bad soil conditions is giving way to the cheaper and better practice of building subgrades of high bearing power. This is the outstanding development of recent years, and while it is required for all types of pavements the benefits show up markedly in the flexible type because thickness may be reduced in almost direct proportion to subgrade improvement.

Subgrade Design

Of the several methods, the first is densification of the natural soils themselves. The effect of such

*This paper was presented by the author before the Nineteenth Annual Meeting of the Highway Research Board of Washington, D. C.

procedure is often the equivalent of several inches of pavement. Many States now call for subgrades to be consolidated to 90 or 95 per cent. density as measured by the Proctor test. The paper by Ira B. Mullis, entitled "Principles Applying to Highway Road Beds," appearing in the September, 1938, "Proceedings," American Society of Civil Engineers, is worthy of careful study. As a result of wide study of surface failures, Mr. Mullis states that "no case (failure) is recalled in which the bulk density of the road bed was in excess of 1·50." (Bulk density= dry weight in grammes/bulk volume of mass in cubic centimetres). In other words, by building subgrades to densities maintainable the year around above this figure no pavement troubles occur.

Subgrade Movement

For many years the writer has called attention to the wasteful practice of unclassified explanation, whereby the weathered top soils are so frequently thrown away and the unstable subsoils are left as the subgrade on which a pavement is to be placed. Most of the ills which have surrounded pavement construction of all types have been due to subsequent subgrade movement which could be largely prevented by selecting material from weathered soils. Inasmuch as these soils are cheap relatively, a layer of 12 in. or more in depth can be placed for a fraction of the cost of a pavement and yet the effect is equivalent to a substantial thickness in pavement. Selected subgrades having high stability, of course, lead to thinner surface sections and resultant economy and freedom from maintenance.

An interesting report is noted from Texas, where tests are made to detect suitable deposits of materials for subgrade construction. This is known as "the electrical resistivity instrument," and the procedure is a type of geophysical study. The equipment can be set up and readings taken at 1 ft. intervals down to 10 ft. in about twenty minutes. According to their report the procedure is very successful and permits discovery of deposits which are not available by surface examination and which are difficult and expensive to find by the usual test pit method.

One State in referring to failures of road-mix surfaces some years ago notes that the combination of 6 in. base and no subgrade treatment led to uncertain results, while by improving subgrades according to soil studies and increasing base thickness to 8 in. the greatly increased traffic of present day is carried without failures. The question of improving subgrades by adding granular material has often deterred engineers because of fancied expense. In most parts of the country such material is, on the contrary, not expensive.

Insulation Course

Several States mention the use of insulation course over the subgrade prior to surfacing. The writer first noticed this procedure some years ago in Ohio, and which involves placing from 1 in. to 2 in. of screenings over the subgrade prior to placing pavement. The value of this layer is not as widely appreciated as should be the case. In the construction of macadam and gravel bases, it is a well-known fact that in certain soils a loss of metal is encountered due to the intrusion of the soil into the aggregate layer. Furthermore, obtaining suitable density in the base course is retarded because there is not sufficient resistance in the subgrade against which to roll. By placing this insulation course a solid subgrade is established much as would be the case of putting down a layer of plank, so that when the next layer of aggregate or paving mixture is applied there is little or no deformation and rolling quickly produces a dense consolidated course. It is the writer's firm belief, based on observation of this procedure, that 1½ in. of screenings on a clay soil is equivalent to 3 in. of crushed stone without the use of screenings, and the inclusion of an insulation course as a requirement in the construction of new stone and gravel foundations is urged as desirable and economical construction where screenings are cheaply available.

PERMANENT
HUME STEEL PIPE
(with Spun Concrete Lining and R. C. C. Outcoating)
POSSESSES FULL PROTECTION, INTERNAL AND EXTERNAL. GIVES LONGER LIFE THAN UNPROTECTED METAL PIPE.
SATISFIES ALL CONDITIONS ! !
Gives about 30 per cent. superior flow of water.
Saves in laying, jointing and transport.
Stands very high pressure easily.
Free from Rust and Tuberculation.
Saves a large amount initially.
Is regarded as the best Pipe by Eminent Experts.
Can be re-used after a number of years elsewhere.
Free from Bursts.

Influence Of Traffic On Design

The effect of changing traffic has not yet fully been taken into account by designers. Ten years ago flexible types of surfaces, particularly those of rather thin character, where surfaces had been constructed by traffic-bound methods on rural highways, were showing signs of extensive failure. Surface treatment and even penetration macadam surfaces were showing increasing costs of maintenance. This maintenance took two principal forms—one, the repair of potholes where the surface was breaking down and the other, edge failure and settlement. Practically all passenger vehicles at that time were equipped with cord tyres, while the majority of trucks had either solid tyres or else cord tyres which approached them in behaviour. Impact was a decided factor, because when a vehicle so equipped dropped into a depression there was little give to the tyre.

This condition has completely changed and it is safe to say that the impact effect under modern tyres is practically negligible. The reason is that even though a vehicle passes over a high spot in the pavement and a drop is experienced, the contact area of the baloon tyre with the pavement is immediately enlarged. Recent studies on aeroplane tyres indicate this fact to a marked degree. It explains without any doubt the fact that with the general adoption of the ballon tyre many old, thin surfaces which were on the verge of failure in 1928 and 1929, were thereafter salvaged under simple maintenance methods and have been improving steadily ever since.

The present load per square inch under the largest truck is probably less than that under the wheels of a two-horse wagon of twenty years ago. This factor has not yet been taken into full account in pavement design, and it is noted here in order to bring out the fact that it is the *loading per square inch* and the *character of the margin of tyre contact* which properly should be taken into consideration, rather than simply the total wheel load in designing flexible types of pavement. This factor is taken into consideration by the writer in the formula suggested for determination of pavement thickness.

Effect Of Width

The effect of width of pavement is far more important than generally realised. Much of the failure which occurred in the late 'twenties was due to concentration of loads at the outer edge of the pavement. While the better ditch construction today has increased the uniformity of subgrade completely across the roadway width, nevertheless the edge of any pavement is still its weak spot and the intrusion of water beneath this edge under particularly adverse conditions of ice and snow may lead to lowered subgrade resistance. By increasing pavement width as will permit considerable lateral movement, the likelihood of any areas being overstressed is largely eliminated.

Inasmuch as this ties up with these studies in regard to safety, it is recommended that two lane pavement widths be a minimum of 22 ft., and for old pavements of lesser width that the berms be given such treatment as will make them practically homogeneous with the pavement itself. It is believed that the trend for two lane pavements is toward 24 ft. as the minimum and that all experience indicates that pavements of that width can be constructed of such thickness that for a given volume of material it is better design to have this width in a thinner section rather than a 20 ft. width and a thicker section.

Influence Of Improved Equipment

The effect of equipment applies in several ways to present-day design, the first one in regard to preparation of the road cross section. One does not have to go back very far to remember when the flow line in a highway ditch was often inadequate, due to the difficulty of readily removing rock and ledge points with equipment then available. Frequent pockets would be encountered in ditches which led water to the subgrade with resultant failure of the pavement due to loss of subgrade support. This one item has been changed to such a degree through the use of power equipment that the water table under modern highways has been lowered to provide more nearly uniform subgrade support throughout the year.

Another point in regard to equipment is cheap haulage. The radius of economical haul from any given source of aggregates has been greatly extended, so that it is possible to employ materials for foundation construction to take care of modern traffic needs at costs which are little more than one-half to one-third of what they were ten years ago. This, coupled with easy construction of wide road beds and lowered water table, makes for economical construction of sound foundations.

Likewise, for surface courses of all types, cheap haulage has permitted mobilisation of materials in storage and stockpile and then with favourable weather conditions to complete rapidly the construction project in a short period. There is practically no limit to the construction rate of bituminous surface types, inasmuch as they may be used immediately after placement. Several States indicate that with cheaper hauls the type of surface has been changed. Two trends appear: (1) That with construction of solid subgrades, heavy surface treatments are often adequate where formerly greater pavement thickness was employed; (2) that plant mixtures are becoming almost as economical as road mixes in many areas, especially under adverse climatic conditions. Hot plant mixes are being hauled as much as 50 miles, while 20-mile hauls are every day occurrences.

(To be continued)

POPULATION DRIVE IN JAPAN

The Japanese Cabinet has decided that a population of 100,000,000 by 1960 should be Japan's aim. The present population is 30,000,000 short of this. The new population policy, says the Domei Agency, is part of Japan's mission in what is described as a sphere of common prosperity throughout East Asia.

Early marriages and large families are to be encouraged and subsidised. During the next 10 years the average marrying age of a Japanese man will be 25 years and for women 21. An ideal Japanese family will be one with five children. Bachelors, it is understood, will be subject to additional taxation.

CIVIC NEWS FROM FAR & NEAR

SAMBALPUR'S LOSS

The death has occurred of Mrs. Annapurna Devi, the first elected woman member of Sambalpur District Board, says a Nawpara message. She was 54 years of age and a well known social worker.

RAJAHMUNDRY SUPPORTS CHARKA

The Rajahmundry Municipal Council has provided in the budget for current year which has been adopted a sum of Rs. 1,500 for the purchase of charkas and encouragement of spinning.

SURCHARGE NOTICE ON BOARD

The Examiner of Local Accounts has issued a surcharge notice on the Ganjam District Board for Rs. 259-6-0 spent by the Board for the presentation of an address and expenses over the holding of a Scout rally in connection with the visit of Mr. Subhas Chandra Bose to Berhampore in August, 1939.

FIRST UNDER-SHERIFF OF MADRAS

A new office of Under-Sheriff has been created in Madras. The Under-Sheriff will take the place of the Sheriff on ceremonial occasions in the latter's absense.

Mr. R. Ramanathan Chettiar, son of Raja Sir Annamalai Chettiar of Chettinad, has been chosen as the first Under-Sheriff.

LOCAL BODIES IN PATNA

It is understood that at the recent Conference of Congressmen in local bodies held at Patna it has been decided that the members on local bodies should resign in a body.

In this connection, the Congress members in the local bodies in this district are awaiting further directions from the headquarters of the Provincial Congress Committee, which are soon expected.

JOINT ELECTORATE IN LOCAL BODIES

A proof of the determination of the Government to introduce joint electorates in the local bodies, in spite of the Muslim League Opposition, is given in a fresh notification in the Sind Government Gazette, which announces further extension of terms to the municipalities of Sukkur, Shikarpur and Hyderabad to enable the Government to hold the fresh general elections on the basis of joint electorates.

PRIMARY EDUCATION FOR MUSLIM GIRLS

A scheme for compulsory primary education of Muslim girls in the City of Karachi estimated to cost about a lakh of rupees has been prepared by the Municipal School Board and will be shortly considered by the Karachi Municipal Corporation. This is in pursuance of the Government communication calling on the Corporation to undertake such a scheme.

COMPULSORY EDUCATION IN LAHORE

The Administrator, Lahore Municipality has entrusted Primary School teachers with the duty of collecting necessary particulars about such school going-age (6 to 11 years) boys as are not attending any recognised school at present. They will go from house to house and shop to shop for three days for this purpose.

LAHORE SWEEPERS' UNION

An emergent meeting of the Executive Committee of the Lahore Sweepers' Union was held under the presidentship of Chaudhuri Karam Chand, to protest against the latest move of the municipal authorities to invite the 'jamadars' and sweeper 'chaudhuries' to discuss the 'Balti system' and completely ignore the Sweepers Union.

SEWAGE DISPOSAL AT NAGPUR

Certain new proposals for sewage disposal, it is learnt, have been made by Mr. D. R. Rutnam, I.C.S., officer-in-charge of the Nagpur Municipality and have been accepted by the Nagpur Improvement Trust. They include one system of sewage disposal for the entire city, located near Pardhi, a village in the vicinity of the confluence of the Nag and Pili rivers.

BOMBAY MOVE TO PREVENT ADULTERATION

A resolution, requesting the Government of India to appoint in consultation with the Provincial Governments an expert committee to consider what effective measures should be taken to prevent adulteration of milk, butter and ghee was adopted at a conference of merchants and representatives of several associations held recently at Bombay under the presidency of Mr. Manu Subedar, M.L.A., (Central).

The resolution suggested the imposition of heavy import duty and excise duty on articles which are capable of being used as adulterants.

LATE MR. S. M. MOITRA

Business offices and the local educational institutions were closed on February 11, as a mark of respect to the memory of Mr. Surendra Mohan Moitra, M.L.A., and Chairman, Rajshahi Municipality, who died in Calcutta on the 10th. References were made by members of the Bar before the courts regarding the death of Mr. Moitra which remained closed for the day. The Bar Association adopted a condolence resolution.

SYLHET MUNICIPAL BOARD

The Sylhet Municipal Board which was superseded for two years on the ground of mal-administration, completed the term on February 10 last.

The new Board will be reconstituted after a general election which will be held in the end of May or sometime in June.

The present management of the Board have recommended to the Government of Assam to increase the number of seats in the Sylhet Municipal Board in view of the increase of population in the Municipal area.

MADRAS RESIGNATIONS

It is understood that the Congress Councillors of the Madras Corporation have decided to resign from

(Continued on page 441)

CALCUTTA NEWS & VIEWS A Digest

BAGHBAZAR GYMNASIUM

The 80th Anniversary of the Baghbazar Gymnasium came off on Sunday, the 9th February, at 84, Raja Raj Bulluv Street, Calcutta, Mr. Justice Bijan Kumar Mookherjee, M.A.D.L., presiding.

Prior to the actual demonstration of Physical feats by the members of the Gymnasium a Guard of Honour was presented by the boys of the Institution with Bugle Band. The ceremony opened with *Bande Mataram* sung in Chorus by about 60 members of the Club. Mr. S. C. Biswas one of the Associate Hony. Secretaries read the 80th Annual Report of the Gynasium. The March Past was then celebrated with the Gymnasium Flag, and a highly interesting programme gone through by the different groups of boys.

BURMA PREMIER ENTERTAINED

The Government of Bengal entertained the Hon. U. Saw, Premier of Burma, to a luncheon party on February 11, at Firpo's. The following were present:—Mr. A. K. Fazlul Huq, Premier of Bengal, Sir B. P. Singh Roy, Nawab K. Habibullah Bahadur of Dacca, Nawab Musharraf Hossain, Mr. H. S. Suhrawardy, Mr. Tamizuddin Khan, Mr. M. B. Mullick, Mr. P. D. Raikut, Maharaja S. C. Nandy of Cossimbazar, Mr. Mesbahuddin Ahmed Mr. K. Shahabuddin, Nawabzada K. Nasarullah, Sir M. Azizul Huque, Mr. C. B. Ross and Mr. W. A. M. Walker.

The Committee of the Indian Chamber of Commerce, Calcutta, also met the Burma Premier at a Tea Party the same afternoon when various questions relating to Indo-Burma relationship were informally discussed.

BRAHMO BALIKA SHIKSHALAYA

The old students' reunion of the Brahmo Balika Shikshalaya was held recently in the school premises under the presidency of Lady Abala Bose. The principal speaker, was Sir Sarbapalli Radhakrishnan, who in course of his talk paid a tribute to the foresight of Pandit Shibnath Sastri, the founder of the school and hoped that the school would remain true to its motto of inculcating reverence, devotion to duty and service to humanity and live up to the great tradition and ideals of education in India.

Mrs. D. L. Mozumdar, Honorary Secretary of the Association read out the Annual Report after which the Association gave a tea party to the *ex*-students of school.

In the evening a playlet was staged by the present students of the school. Afterwards a short prayer was conducted by Mrs. Bhattacharyya. This was followed by a sumptuous dinner which was attended by about 600 *ex*-students and present students of the school.

PEARICHURN GIRLS' SCHOOL

The 72nd Prize Distribution Ceremony of the Pearichurn Girls' H. E. School was performed recently on the spacious terrace of the school-building with Sir Hari Sanker Paul, Kt., on the chair. The function opened with a *Stotra* of Ganapati recited by some girls and the national anthem *Bande Mataram*. A few scenes of "King Lear" and the last scene of the Sanskrit Drama "Chanda Kausikam" staged on the occasion followed the national song. Medals and various prizes in general merit, sewing, cooking, spinning, music, drawing, modelling, attendance, moral lesson and *Siva* Puja were then awarded to deserving girls by the President, who in the short speech spoke very highly of the school for its way of imparting education to girls after Hindu tradition and culture so as to make the girls good mothers and ideal housewives.

LATE RAI BAHADUR N. K. GHOSH

The death occurred in Calcutta on February 8, of Rai Bahadur Nishi Kanta Ghosh, a lawyer and a former Chairman of the Mymensigh Municipality, which office he held for 12 years.

The Rai Bahadur, who was 76 at the time of his death, acted as the Secretary of the Mymensigh Committee of the Imperial Indian Relief Fund during the last war. The water works drainage scemes of Mymensingh Municipality were among his numerous public services. He is survived by his wife, two daughters and a younger brother.

A. I. VARNASHRAM SWARAJYA SANGHA

The two-day session of the All-India Varnashram Swarajya Sangha Conference concluded in Calcutta on Sunday February, 9, Rao Sahib N. Natesa Aiyar of Madras presiding.

While expressing the view that the Government of India Act of 1935, had failed to achieve its purpose, the Conference demanded by a resolution, that a new constitution should be framed making sufficient provision for the preservation of the fundamental rights enjoyed by the various communities in India under the system of Varnashrama Dharma.

Resolutions demanding among others non-interference by the Government of India in the religious affairs of different communities, and urging the necessity of imparting military training to Indians enabling them to defend India against foreign aggressions were also adopted in the Conference.

BENGAL MILLOWNERS AND GOVT. ORDERS

Prospects of Bengal Cotton Mills getting a good share in the orders for textile stores emanating from the Indian Stores Department and the Department of Supply were discussed by the Executive Com-

mittee of the Bengal Millowners' Association with Lt.-Col. J. R. Marriot, Controller of Supplies, Bengal, at a recent meeting in Calcutta.

The Committee also met Mr. S. C. Mitter, Director of Industries, Bengal, in order to devise means for ensuring a closer collaboration between the Association and the Industries Department for promoting the interests of the cotton mill industry in Bengal. A reorganization of the Bengal Textile Institute at Serampore with the active co-operation of the Association and the employment of those trained in the Institute by the member mills were suggested at the meeting.

The discussions also related to the shortage of wagon supply for the carriage of raw cotton from the Punjab stations to Howrah; the scheme for the cultivation of better types of cotton in Bengal and the provision of stirrup-pumps for meeting the danger from incendiary bombs.

A. R. P. DEMONSTRATION IN SHAMPUKER

An impressive and educative A. R. P. demonstration of the Shampuker Sub-Area was held on the 9th February, at Sham Square under the presidency of the Rt. Hon'ble Lord Sinha of Raipur. On his arrival the President was received at the gate by Mr. Kiron C. Bose, the Chief Air Raid Warden, Mr. S. K. Ghosh, Additionl Chief Air Raid Warden, and Rai Bahadur A. T. Ghosh, the District Commandant of the Shampuker Sub-Area. After the inspection of the Civic Services Units by the President and the March Past Mr. Kiron C. Bose in a neat little speech welcomed the President and Mr. N. V. H. Symons, A.R.P. Controller, Bengal and other guests. Mr. Symons then explained the utility of the A. R. P. Organisations in Bengal and exhorted them to co-operate with the Civic Services.

The display then began and demonstrations were given showing how to tackle with High Explosive, Incendiary and Gas Bombs and how to decontaminate the places affected with and to cleanse people attacked with gas.

One of the most attractive items in the demonstration was the "destruction of a house as a result of bombing" and the "casualties" that followed the "action" on account of the indifference and callousness of some of the urchins who despite the requests of the Wardens and volunteers preferred to remain in the open street instead of going to the Public Shelter. The "casualties" were immediately treated by the Ambulance Corps and First Aiders.

Mr. Kiron C. Bose gave a running commentary in simple but impressive Bengali which was very much appreciated. Mr. D. Sen after the demonstration spoke on the utility of the Civic Services and this was followed by a vote of thanks to the chair proposed by Rai Bahadur A. T. Ghosh.

CALCUTTA ACADEMY

The Diamond Jubilee Celebrations of Calcutta Academy commenced on Friday, the 7th February and continued up to Sunday, the 9th. On this occasion the school premises at 72, Amherst Street were tastefully decorated with pictures of illustrious Indian leaders and educationists. The function was celebrated with due pomp and grandeur. The ceremony was opened by Mr. Panna Lal Bose, Retired Judge, and an ex-student of the school. He delivered an interesting speech in course of which he offered his homage to the inventor of the expression "old boy," and observed that he felt exceedingly happy to call himself an old boy at his ripe old age. He also made a generous gift of rupees fifty for the entertainment of the students. On the afternoon of that day, was held a re-union of the old boys presided over by Dr. Sumiti Kumar Chatterjee, M.A., D.Litt., an ex-student of the institution. There was also a public meeting on Saturday, the 8th February, which was largely attended by students, guardians and well-wishers of the school.

BRATACHARI RALLY

A rally of Bratacharis from various parts of India was held at Bratacharigram, in Behala, on Sunday, February, 9, when the Foundation Day of the movement was celebrated by the Bengal Bratachari Society, Maharaja Sris Chandra Nandy of Cossimbazar presided.

There was a display of Bratachari activities including mass drill to the accompaniment of a band, Water-hyacinth destruction, first-aid, physical exercises, songs and dances.

Mr. G. S. Dutt, the Founder-President, said that the celebration of the Foundation Day had a spiritual as well as a national significance. People of all creeds united together through the *bratas* of knowledge, labour, truth, unity and joy and affirmed the same vows and principles, thus helping to bring about a consciousness of the unity of humanity.

Maharaja Sris Chandra Nandy expressed his pleasure at the growth of the movement. It had placed before the country an entirely new approach to national problems which was free from the partisan spirit and emphasized the best elements in the culture of both Hindus and Moslems. He stressed the important part the movement was playing in rural reconstruction work.

Mrs. Sarala Devi Chaudhury and Khan Sahib Abdul Hamid Chaudhury, Deputy President, Bengal Legislative Council and Dr. A. C. Ukil also addressed the gathering.

Lt.-Col. A. C. Chatterji, Director of Public Health, proposed a vote of thanks to the Chair.

On Saturday, Dr. Meghnad Saha and Mr. Jnananjan Neogi addressed a Conference of the Bratacharis in this connexion on the utility of the movement in the national reconstruction.

BUST UNVEILED

Sir Manmatha Nath Mukherjee performed the unveiling ceremony of the bust of late Mr. Anil Kumar Roy Choudhury, who was the Organising Secretary and Treasurer of the Hindu Satkar Samity, at the Annual General Meeting of the Samity on the 10th February last at the Samity's premises on Sambhu Chatterjee Street.

Sir Manmatha Nath and several other speakers including Mr. Suresh Chandra Majumdar, Mr. Makhan Lal Sen, Mr. Indra Bhusan Bood, Mr. Ashutosh Lahiry, Mr. Manindra Nath Mitter, Mr. Bhutnath Mukherjee and Mr. Haridas Mazumdar addressed the meeting paying tributes of respect to the memory of the departed soul.

AYURVEDIC ANTI-T. B. CONFERENCE

The efficacy of indigenous treatment in tuberculosis was acclaimed by the large number of Ayurvedists who assembled at the second session of the Ayurvedic Anti-tuberculosis Conference which met on Saturday last at the hall of the Mahabodhi Society at College Square. Kaviraj Jadunath Gupta Sastri presided.

In the absence, owing to indisposition of Kaviraj Bimalananda Tarkatirtha who was to have opened the Conference Kaviraj Surendranath Das Gupta, Superintendent, Ashtanga Ayurveda Tuberculosis Hospital at Patipukur, performed the function.

The mortality from Tuberculosis in Bengal, said Kaviraj Surendranath Das Gupta, amounted to over a lakh every year and the number of people suffering from it was not less than a million. Treatment of tubercular patients according to Ayurveda had produced excellent results and its efficacy could rival any other method prescribed by Western Scientists. From his personal experience the speaker could say that Ayurvedic remedies, applied to preliminary and even intermediate stages of the disease, had produced wonderful effect. A large number of such patients were being successfully treated every year in the Ayurvedic Hospital at Patipukur and the results so far achieved had encouraged them to continue the treatment.

A message from His Excellency the Governor of Bengal, regretting his inability to attend the Conference and conveying his good wishes, was read at the meeting.

WARD IV BABY SHOW

Under the auspices of Ward IV Health Association a Baby Show was organised at the Ram Mohun Library Hall on Sunday, February, 9 in which fifty-nine babies participated. Two cups and four medals and six certificates of honour were awarded to the following six successful babies :—1st—Khuki (1 year) daughter of Mr. Sailen Mukherjee of Garpar; 2nd—Tapati (8 months) daughter of Mr. Ramani Chakrabarti of Ashutosh Sil Lane; 3rd—Dulu (10 months) son of Mr. Gopal Ch. Mukherjee of Bechu Chatterjee Street; Anju (2 months) son of Mr. Banshi Badan Ghose of Kalu Ghose Lane; Jharna (9 months) daughter of Mr. Gopeswar Pyne of Vidyasagar Street; Uma Rani (18 months) daughter of Mr. Brojo N. Bose of Jugipara Main Road. All the fifty-nine babies were given each a nice doll. Doctors Hari Bhusan Bose, Debi Bose, D. N. Banerjee, Sris Mukherjee and Suren Bhattacherjee acted as judges.

Blood was also taken from ladies for W. R. free of cost.

Lt.-Col. A. C. Chatterjee, Director of Public Health, Bengal, presided over the function and Mrs. A. C. Chatterjee distributed the prizes and certificates of Honour. Mrs. Mrionmoyee Roy, Dr. Sundari Mohan Das and Dr. D. N. Maitra delivered instructive lectures on Maternity and Child-Welfare.

EDUCATION OF THE BLIND

Educational problems relating to blind children in India, particularly in Bengal, were discussed by Mr. S. C. Roy, the famous blind scholar, at the weekly luncheon meeting of the Rotary Club at the Great Eastern Hotel on Tuesday, the 11th February, when Mr. Roy read out his speech from a Braille copy. Rai Bahadur P. N. Mukherji, President, occupied the Chair and Mr. A. R. Siddiqi, Mayor of Calcutta who took such a great interest in organising the Blind Camp in Calcutta lately was a prominent guest.

Mr. Roy said that according to the census report of 1981, the number of blind persons in India was a little over 600,000 which represented the largest incidence of blindness recorded in any country. In the same census, Bengal's portion was 87,000. "But" Mr. Roy said "there is great doubt if these figures are really correct, as there is great difficulty in tabulating and recording blind persons in census reports. For the same reason Government have decided not to record them in the forthcoming census." Mr. Roy's protest has had no effect, he said.

Mr. Roy regretted that in spite of there being so many blind persons there was no adequate arrangement in India for educating the blind children.

Continuing Mr. Roy said "As a matter of fact, there is only one school in Bengal where there is provision for teaching only 200 blind children including male and female, which, of course is utterly inadequate. In America there are as many as 54 such schools and the cost of all of them is borne by the State. There is again another difficulty in teaching blind children in India on account of absence of any Braille printing press. Every book in Braille has to be imported from Europe or America, which, of course, is very expensive. Efforts should, therefore, be made to install a Braille printing press in India. Adequate number of schools should be started to educate the children and this should be a charge on the Government, as in America and other European countries. It is more necessary to educate the blind children than

---

A. R. P. FOR CITY'S WATER SUPPLY

Rs. 21 Lakhs For 3,000 Tube Wells

The installation of about 3,000 tube wells at a cost of about Rs. 21,00,000 at different public places in the City was decided upon at a Conference held on the 8th February, at the Secretariat between the Government of Bengal and the representatives of the Calcutta Corporation. The decision, it is understood, was taken following a prolonged discussion on a scheme, recently submitted by the Corporation for maintaining the water-supply of the city in case of a possible enemy air raid.

The question of financing the scheme, however, has not been decided and the Corporation expressed the opinion as they had no power to levy emergency taxes, it would not be possible for them to give effect to the scheme unless the Government introduced the necessary legislation for raising the money.

those with sights, as they are more or less helpless in even ordinary day to day work. After the opening of Braille printing press, arrangement should be made to bring out periodicals in Braille, as is done in other countries. In Japan there is even a Braille daily paper."

Mr. Roy was given a great ovation when he finished his speech. Many questions were asked by various Rotarians, which were all satisfactorily answered by Mr. Roy.

ROTARY CLUB TREAT FOR CHILDREN

The annual treat for children, organized by the Calcutta Rotary Club, took place at the Botanical Gardens, Shibpur on the 12th February. About 500 children from various orphanages were taken by launch to the gardens where they spent the day. They were given breakfast, lunch and tea and the party returned to Calcutta by 6 o'clock.

HINDU PILGRIMS' PROTECTION SOCIETY

ELECTION OF OFFICE-BEARERS FOR 1941

At the Eighth Annual General Meeting of the Hindu Pilgrims' Protection Society held on Saturday, the 8th February, 1941, under the presidentship of Mr. Manindra Nath Mitter, Solicitor, the following Office-bearers were duly elected for the year 1941 :—

President—Sir Hari Sanker Paul, Kt., M.L.A.; Vice-Presidents—Mr. Mrinal Kanti Ghosh, and Mr. Purna Chandra Ghosh; Treasurer—Mr. Sanat Kumar Ray Chowdhury, M.A., B.L.; General Secretary—Kabiraj Satyabrata Sen; Joint Secretary—Mr. Indra Bhusan Beed; Assistant Secretaries—Mr. Birojanath Sinha and Mr. Dasarathi Bhattacharjee; Auditors—Messrs. B. Mukherjee & Co., R.A.A.

The Executive Committee was formed with 30 influential members.

—Civic News From Far & Near

(*Continued from page* 437)

the municipality in obedience to Mr. Gandhi's mandate and as a protest against the Corporation Council sanctioning Rs. 10,000 for war purposes in the absence of the Congress party from the Council on January 7.

It is stated that excluding five Congress Councillors of the Corporation now in jail, about 15 members will hand in their resignations to the Mayor through their leader, Dr. U. Krishna Rao immediately.

DISTRESS WARRANT AGAINST GANDHIJI

The Thana Municipality has decided to issue a distress warrant against Mahatma Gandhi in respect of "Gandhi Asram," a property situated in Thana, according to the Thana correspondent of the *Evening News*.

This property was gifted to Mahatma Gandhi in 1928. For some time Dr. Ambedkar conducted a free hostel in the Ashram for the benefit of Harijan students. In 1936, it is stated, Mahatma Gandhi created a Trust and vested the property in the Trust. The trustees claim that the Ashram is a charitable institution and therefore immune from taxation under the Thana Municipal Borough's Act.

For the period between 1928 and 1936 during which the property was in the hands of Mahatma Gandhi, the Municipality has decided to claim taxes from Mahatma Gandhi and from the trustees for the later period.

JOYNAGORE-MAJILPUR MUNICIPALITY

A Special Meeting of the Commissioners of the Joynagar-Majilpur Municipality was held on February, the 9th, when the Budget for the year 1941-42 as prepared by the Chairman was unanimously passed.

DONATION TO VISVA-BHARATI

His Excellency Tai Chi Tao, President of the Examination Yuan and member of the State Council of the National Government of China, who headed the Chinese Goodwill Mission to India last year, has, it is learnt, donated a sum of Rs. 10,000 to the Visva-Bharati, Dr. Tagore's Institution at Santiniketan.

The donation is to be utilised for rural uplift work organised by the Visva-Bharati, for building dormitories as well as for the improvement of the Cheena Bhawan.

NEW TOWN-HALL FOR CAWNPORE

The Cawnpore Municipal Board has decided to hold a competition so as to be able to select a suitable design for the proposed Town Hall building, estimated to cost Rs. 2,50,000.

A prize of Rs. 5,000 will be given to the architect whose design is accepted for construction.

LEAGUE MAJORITY IN DACCA DISTRICT BOARD

Of the 25 general seats the Muslim League has captured 22 on the first election to the Dacca District Board under the new constitution. Four nominees of the Muslim League (two caste Hindus and two Scheduled caste men) have been elected from reserved constituencies. The League will thus have a majority in the new Board composed of 47 members of whom 11 will be nominated by the Government.

The most notable defect is that of Mr. Amulya Ratan Guha, the present Chairman, who has been a member of the Board for the last 27 years. He has been defeated by a Caste Hindu who was supported by the Muslim League.

BRAZILIAN OFFICERS ON STUDY MISSION

Ten administrators have been sent to the United States by the Brazilian government to study American methods of government. Each man is placed for a year in a Federal Department, corresponding to the one in which he is employed at home, to observe the processes of administration which may be adapted to Brazilian problems. This plan, which is sponsored by the Administrative Department of Public Service (the Civil Service Commission of Brazil), is expected to result not only in improved administration but also in improved relations between the two countries.

Calcutta Associations & Institutions

CALCUTTA CORPORATION A. R. P. UNIT

Mr. J. C. Mukerjea, Barrister-at-Law, Chief Executive Officer, Calcutta Corporation and General Controlling Officer, Calcutta Corporation A. R. P. Unit has been pleased to make the following appointments :—

Chief Organiser—Mr. R. M. Gupta, B.E., (Water Works Department); Chief Air Raid Warden and A. R. P. Instructor—Mr. Benoy Kumar Roy (Water Works Department); Chief Medical Officer—Dr. M. Sarkar, M.Sc., M.B., D.P.H. (Cal. and Lond.), (District Health Officer II); Chief Lighting Restricter—Mr. Nishit Chandra Mitter (Water Works Department); Chief Anti-Gas Officer—Mr. Kali Das Ghosh (Water Works Department); Additional Chief Air Raid Warden and A. R. P. Instructor—Mr. Sidhu Bhusan Mukherjea, (Water Works Department); Deputy Chief Air Raid Wardens—Mr. Sachindra Nath Sarkar, (Water Works Department), Mr. Arunendra Nath Banerjee, B.A., (Water Works Department), Mr. Nanda Lal Pal, B.L., (Law Department); Mr. D. At the Ninth Annual General Meeting held on Saturday, the 8th February, 1941, under the presidentship of Sir M. N. Mukherji, Kt., M.A., B.L., the following Office-bearers were duly elected for the year 1941 :—

President—Sir M. N. Mukherji, Kt., M.A., B.L.; Vice-Presidents—(1) Sir Hari Sanker Paul, Kt., M.L.A., (2) Kabiraj Satyabrata Sen, (3) Mr. Mrinal Kanti Ghosh, (4) Mr. Haridas Mazumdar, and (5) Mr. G. D. Birla; Treasurer—Mr. Sanat Kumar Roy Chowdhury, M.A., B.L.; General Secretary—Mr. Indra Bhusan Beed; Joint Secretaries —Mr. Bhupendra Chandra Lahiry; and Mr. Prafulla Kumar Dutta; Assistant Secretaries—Mr. Manindra Nath Ganguly; and Mr. Dasarathi Bhattacherjee; Auditors—Messrs. B. Mukherjee & Co., R.A.A.; Corporation Representatives—(1) Mr. Phanindra Nath Brahma, M.A., B.L., and (2) Mr. Probhudayal Himatsingka, Solicitor.

The Executive Committee was formed with 30 influential members

BOYS OWN LIBRARY AND YOUNG MEN'S INSTITUTE

Mr. Amritalal Ghosh has donated a sum of Rs. 30 towards the Library fund and has been elected a life member of the Boys' Own Library and Young Men's Institute.

HEALTH OFFICER RETURNS FROM LEAVE

Dr. S. N. Ghose, L.M.S., D.P.H., D.T.M., Health Officer, Corporation of Calcutta who had gone on leave, resumed his duties on 9th February, 1941.

As Others See us

CALCUTTA'S FINANCES

The following leading article of the *Amrita Bazar Patrika* on the Corporation Budget for 1941-42 will be of interest to our readers as embodying important suggestions and criticisms :—

THE budget of a public body in modern times is not merely a study in figures. Not that it was so in the earlier days, but on account of the ever-increasing social services of Governments and corporate bodies much more importance attaches to the budget than did previously. Men and statesmen are prone to imitate and as a general rule a pioneer's track is followed as a matter of course irrespective of the changes in conditions of things. So a budget gives you receipts and expenditures, estimates of these for the ensuing year followed by the revised estimates for the current year. It shows also the opening balance. It specifies the sources of revenue as well as the items of expenditure. Then there is revenue account and capital account with a mass of figures that tend to confuse and puzzle the ordinary citizen or the man in the street. In ultimate analysis the budget reveals perhaps more than any public activity the character of the ruling classes in any social system. All these you find in the budget of the city presented to the City Fathers by the Chief Executive Officer on Monday last. In the main the receipts show a slight increase both in the revised estimates as compared with the original estimates and in the original estimates for the ensuing year as against the revised estimates for the current year. On the expenditure side the revised estimates show an increase over the original estimates while the original estimates for the ensuing year record a decline as against the revised estimates for the current year. There is considerable improvement in the closing balance in the revised estimates with slight deterioration in the original estimates for the ensuing year. There is, however, one point in this connection which is not dealt with by the Chief Executive Officer. The sum required for immediate expenditure on the Drainage Outfall Scheme seems to have been asked for from the Public Exchequer of the Province inasmuch as the scheme is likely to benefit certain areas outside the limits of the Municipality. Should the Government fail to make the grant the Corporation itself would have to find out the money with the result that there would be further depletion of the balance.

Then there is another matter. The Chief Executive Officer has struck a significant note on the question of housing of the poorer classes of the city and sanitary dwellings for the Corporation's own scavengers and carters. We are told that a sum of Rs. 1 lakh had been set apart in the budget for the purpose but that it remained unspent. We do not know why. The Chief Executive Officer does not throw light on it either. The matter needs further elucidation. We must, however, congratulate the Chief Executive Officer on the fact that he has raised two issues of far-reaching importance to the City of Calcutta. The first is the need for a more equitable adjustment of sources of revenue between the Government and the Corporation. The second is the need for larger expenditure on social services within the Municipal limits. The main source of the present revenue of the Corporation is the consolidated rate. The other sources are the Howrah Bridge Tax, the Dog Tax and certain other minor taxes levied in accordance with the provisions of the Municipal Act of 1923. The Chief Executive Officer is definitely of the opinion that virtually the limits of flexibility under these heads have been reached and that other additional sources should be tapped if the Corporation is to discharge its legitimate functions adequately and give the rate-payers the minimum amenities of civilized existence. In this connection he has referred to the Petrol Tax, the Education Cess and the Vehicles Tax. Under the last head he complains that the full share of the proceeds does not go to the Corporation, the Government absorbing more than what may be legitimately due to them. The Education Cess is a new demand. At the present stage it appears only in the form of a suggestion; it is not incorporated in the budget proposals. The Chief Executive Officer thinks that the Government have failed to co-operate with the Corporation in finding for the city additional sources of revenue. The complaint is justified. The Government are striving to their utmost to utilize all possible sources of revenue and in their zeal they have systematically ignored the claims of the City.

It is not our intention to pronounce any final opinion on the suggestions put forward by the Chief Executive Officer. But the matter is one that deserves anxious and sympathetic consideration at the hands of all concerned. The revenues of the Central Government and of the Provinces have been more or less demarcated by certain provisions of the Constitution Act and the relevant Schedule thereto. All possibilities of conflict between these contesting parties may not have been eliminated. As a matter of fact, a conflict arose more than two years ago as a result of the Government of India challenging the validity of a Sales Tax imposed under an enactment of the Legislature of the Central Provinces and Berar. That conflict has been resolved by the Governor-General's reference to the Federal Court and the latter's report thereon. Therefore, there is machinery for effective adjudication between the Centre and the Provinces in any case of conflict. No such procedure has yet been evolved, so far as the respective

---

RESIDENCE FOR REFUGEES

Landlords Approached By Government

Calcutta's prominent landlords, proprietors of hotels and mansions and court as well as the Chairmen of several District War Committees of Bengal, have, it is understood, been requested to make a survey of the actual accommodation available in the province suitable to British and European refugees.

It is pointed out by the Calcutta War Committee that the Government of Bengal wanted the Committee to supply this information. Consequently a circular on the subject had been addressed to the above mentioned people with a view to obtaining the information.

A scheme for receiving British subjects and those of other countries desiring accommodation in India on account of war, it is pointed out, is under consideration of the Government of India. Bengal Government have agreed to co-operate in this respect, and have enquired of the War Committees to furnish them with actual information.

There is reason to believe, says the circular that owing to the presence in India at present of a large number of Europeans particularly women and children who would otherwise have remained in their own countries it has become difficult to have accommodation in climates suitable for Europeans particularly in the hot weather. A survey as to the possibility of receiving additional European residents with or without constructing additional accommodation is necessary. The whole or at least a portion of the accommodation may be required for all the year round during the continuance of war.

It is learnt that the Sub-divisional Officer of Baraset has issued an appeal to local gentlemen for sparing some of their abandoned residential houses for the use of British and European refugees.

claims of the Provinces and the Municipal or Local bodies are concerned. We think that the matter calls for investigation so that consistently with the financial stability of the Province, Municipal and Local bodies may be in a position to address themselves without reservation to social services such as those mentioned by the Chief Executive Officer in the course of his financial statement presented on Monday. At present financial relations between the Provincial authorities on the one hand and the Municipalities and Local bodies on the other are in a chaotic condition. A clear line of demarcation is needed and we suggest that a Committee of experts may be appointed to go into the question and make report.

This brings us to the Chief Executive Officer's stress on such social services as the housing of the poorer classes, sanitary dwellings for the menial staff of the Corporation, adequate supply of pure milk for the people of the City, adequate distribution of water-supply, all-round improvement of the bustees, additional maternity homes, systematic examination of foodstuffs and drugs dispensed to the ailing citizens. The list is not exhaustive. There are many others that may legitimately find place in it. But the Chief Executive Officer has done well in trying in his own way to awaken a sense of civic awareness on the part of those who are in charge of affairs. Life is not a mechanical routine. Its needs expand, its ideals change and its urge demands fuller satisfaction. From this point of view the Corporation Budget, like similar budgets of Governments, is disappointing. That, however, is understandable having regard to its limited resources as well as to the lack of sense of social values on the part of the ruling classes. Drastic changes are called for in the technique of administration and in the estimate of values. We trust that in these respects the Chief Executive Officer's suggestions may engage the attention of Aldermen and Councillors.

HEALTH EXHIBITION AT HOWRAH

The opening ceremony of the Health Exhibition organised by Balak Sangha, Howrah, was performed on Wednesday last by Dr. J. B. Grant, Director of All-India Institute of Public Health and Hygiene. Mr. B. P. Pain, Chairman, Howrah Municipality, presided.

In course of his interesting address Dr. Grant dwelt on the problems of public health administration in India, the need of an awakened public opinion as the condition precedent to the success of any social activity, the relative backwardness of India in public health matters as compared with other countries in the West, the necessity of public health nursing in India and a conscious planning of physical manhood in addition to medical measures for ensuring immunity from infectious diseases. The speech was highly appreciated by the audience. The President expressed his satisfaction at the exhibits and exhorted the audience to learn from them.

FIRE IN CITY JUTE PRESS

A big fire broke out in Golabari Jute Press in Bagh Bazar, North Calcutta, on the afternoon of Friday, the 7th February, which caused considerable dislocation of traffic in Upper Chitpore Road.

It is reported that the fire originated in a large single-storeyed godown of the Jute Press, which was stacked with 'kutcha' bales of jute, and spread rapidly, causing a commotion in the locality.

The Fire Brigade responded to the call with 6 fire engines, one emergency tender, one fire float, and one turntable ladder and succeeded in bringing the fire under control after three hours of strenuous work.

As a result of the fire, a portion of the roof collapsed. No one is reported to have been injured.

The cause of the fire could not be ascertained. Damage was considerable, but the property was insured.

The Fire Brigade staff under Mr. F. A. Tucker, Chief Officer, worked at the place till a late hour of the night, while some members of Fire Brigade staff were stationed at the spot for the whole night.

SEVA SADAN DAY

Appeal For Funds

Deshabandhu Chittaranjan Das, the immortal noble son of Bengal died in 1925. Shortly before his death he executed a Deed of Trust by which he dedicated his ancestral home to the service of the women of Bengal, irrespective of caste, creed or colour.

In fulfilment of his last Will, the Trustees established the Chittaranjan Seva Sadan for the relief of the suffering womanhood.

It started with 26 beds in 1926 which went on increasing year after year and to-day the number of beds are 204. Such have been the phenomenal popularity and success of this institution.

But even this is found insufficient at times, when owing to abnormal rush of delivery cases, the authorities are forced to accomodate patients on the floor. To cope with this difficulty the Trustees contemplate construction of an additional Block. This involves a huge expenditure but the Trustees feel confident that the sons and daughters of Bengal will come forward with open purses and help the noble work with ungrudging alacrity.

Besides treatment of indoor cases, there are outdoor departments for the treatment of General Opthalmic and Dental cases as well. The Trustees also intend to open shortly an Outdoor Department for the treatment of diseases of the ear, nose and throat.

It is the Chittaranjan Seva Sadan which for the first time in Bengal has opened a Hospital for the treatment of children named The Chittaranjan Sishusadan in which there are at present 32 beds besides an out-patient department. The number of beds will shortly be increased to 48 as soon as the first floor of the Block now under construction is opened.

The annual expenditure of the Seva Sadan is Rs. 1,40,000 out of which the Calcutta Corporation grants Rs. 50,000. For the balance of the money the Trustees are dependent on the charity of noble-hearted ladies and gentlemen.

The Seva Sadan Day for the collection of funds has this year been fixed for the 15th February. The Trustees appeal to all patriotic Indians to contribute their mite to the noble cause which their illustrious countryman Deshbandhu Chittaranjan Das has left them for fulfilment.

Long live the donors!

NILRATAN SIRCAR,
President, Deshabandhu Memorial Trust

BIDHAN CHANDRA ROY,
Secretary, Deshabandhu Memorial Trust

CORPORATION NOTICES

To Contractors

Tenders are invited in duplicate for the following and will be received by the First Deputy Executive Officer on the date noted for each, up to 2 p.m. Each tender in duplicate must be enclosed in a sealed cover and superscribed—"Tender for....." For specifications and tender forms apply to the Keeper of Records between 11 a.m. and 3 p.m. on week days and 11 a.m. and 1 p.m. on Saturdays. Price Rs. 2 per set.

1. Supply of metals other than Iron and Steel during 1941-42.

2. Supply of bearing springs, draw-bar hooks, etc., during 1941-42.

3. Supply of pipes and fittings during 1941-42.

4. Supply of Miscellaneous stores during 1941-42.

5. Laying 15 in. and 10 in. S. W. Pipe sewer in place of existing sewers in portion of Alimuddin Street.

6. Supply of six 1½ ton, five 2½ ton, five 3½ ton and alternately three 5—6 ton lorry chassis, tractor and two 5-seater cars.

7. Supply of carts for carrying pipes etc., during 1941-42.

8. Cutting and restoring trenches in public roads for laying water mains during 1941-42.

Tenders for 1 to 3 will be opened on 18th February, for 4 on 19th February, for 5 and 6 on 20th February and for 7 and 8 on 21st February, 1941. The rates quoted in tenders for the above are to hold good for three months.

N.B.—All cases of delay over a fortnight in the execution of agreements in respect of works and supply of materials will be reported to the Committee and the parties will not be allowed to execute the agreements after that period without obtaining orders of the Committee.

In case a party deposits earnest money by cheque, he must deposit the cheque at least three working days before the date of opening of the tender.

The contractors should maintain an uniformity of their names and styles of business, appearing on various documents, *e.g.*, Treasurer's receipts, tender forms, agreements, licenses and bills.

Any deviation from this on the part of any contractor whenever detected, will render his tender liable for cancellation.

Where tenders are submitted by a Corporation, it should be signed by a principal officer of the Corporation or by an agent duly authorised in that behalf and be attested by a witness. Where it is submitted by a firm, it should be signed by the proprietor or one of the partners or by an agent duly authorised in that behalf by the firm and be similarly attested.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office.
The 12th February, 1941.

Time Extended.

Re : Registration of Names as Contractors for Petty Plumbing and Petty Improvement Works for 1941-42.

The time for receiving applications for Registration of names as Contractors for the following have been extended. The applications will be received by the 2nd Deputy Executive Officer upto 2 p.m. on the date noted against each, instead of on the 12th and 13th February, 1941, as previously advertised.

1. Petty Plumbing and House Drainage Works of the Corporation for the year 1941-42—11th March, 1941.
2. Petty Improvement Works (other than Petty Plumbing and House Drainage Works) of the Corporation for the year 1941-42—12th March, 1941.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office.
The 10th Febuary, 1941.

Notice to Petty Improvement Contractors.

District No. IV, Engineer's Department.

Tenders for the following works are invited and will be received by the Chief Engineer in duplicate in a sealed cover superscribed "Tender for ....." on Thursday the 20th February, 1941, upto 2 p.m. :—

114. Construction of gate entrances at 8/6, Alipore Park Road, Ward 24—Rs. 354, dated 21st December, 1940, (1 month).

115. Re-adjusting House Drainage of 22/2, Nakuleswartola Lane, Ward 23—Rs. 117, dated 3rd July, 1940, (3 weeks).

N. B.—Please note that words in italics "7 days' notice" in clause 6 of the condition of contract should be read as "3 days' notice".

A. K. SEN,
District Engineer IV

District IV Eng'g Office.
The 11th February, 1941.

Dr. Dey's Kulti Outfall Scheme.

Re : Supply of one Tapuria Boat for Sounding purposes and Ferry Service.

Quotations in sealed covers are invited and will be received by the undersigned upto 2 p.m. on the 19th February, 1941, for supplying and maintaining one Tapuria Boat with one *manjhi* and two *dandies* for one year from 1st April, 1941, to 31st March, 1942, for sounding purposes at different miles of the newly excavated S. W. Channel.

Terms and conditions and other particulars required may be seen at the office during office hours. A security deposit of Rs. 20 in cash is required from the successful tenderer.

A. N. BANERJEE,
Outfall Engineer.

Central Municipal Office.
The 12th February, 1941.

Special Notice.

New Telephone Numbers

It is notified for the information of those interested that all independent telephone connections, except those of the Mayor and the Chief Executive Officer, in the Central Municipal Office including the Hogg Buildings and S. S. Hogg Market, have been brought under our private exchange renumbered as "Calcutta 6600". Henceforward, during office hours, all connections with the offices located in the above mentioned buildings, can be obtained only through this Central Exchange (*viz.*, Calcutta 6600). After office hours and on holidays, the direct connections to the principal officers will work.

M. RAY,
Asst. Secretary.

Central Municipal Office.
The 12th February, 1941.

Street Alignment.

It is hereby notified for general information that the Corporation of Calcutta under powers vested in them in this behalf have by a resolution dated the 22nd January, 1941, prescribed the 25 ft. alignment along Ashraf Mistry Lane (now named Lovelock Place) in continuation of Lovelock Place, to meet a 40 ft. projected road of the Calcutta Improvement Trust in Ward No. 21.

A copy of the plan prepared in this behalf may be seen in the office of the Chief Valuer and Surveyor of the Corporation any working day except Saturday between 11 a.m. and 2-30 p.m. and between 11 a.m. and 12-30 p.m. on Saturdays only on payment of usual fees.

J. C. MUKERJEA,
Chief Executive Officer.

Central Municipal Office.
The 5th February, 1941.

Notice to Rate-payers.

The attention of the rate-payers is invited to Section 190 of the Calcutta Municipal Act which provides for additional costs to be imposed if the bills are not paid within seven days from the date of presentation. Their attention is also invited to Section 191 of the Act which provides for moveable articles to be held under distraint and sold if the bills are not paid within seven days after the service of notices of demand. They are therefore requested to pay up their dues early as under the provisions of Section 149 of the said Act the rate bills for a quarter fall due and become payable within "the 15th of the first month of the quarter, to which they relate."

Defaulting ratepayers should note that if the arrears of rates are not paid when the bills are presented for payment, "action will be taken for their recovery under the provisions of the law."

Applications for reconsideration of assessment including those now pending will not be considered unless full payment of all the arrears is made by the applicants. If not paid up, steps for the recovery of such arrears will be taken under the provisions of law as in any other case.

J. C. MUKERJEA,
Chief Executive Officer.

Central Municipal Office.
The 14th January, 1941.

CORPORATION NOTICES—*Contd.*

Central Municipal Office,
The 11th February, 1941.

S. S. Hogg Market.

NOTICE

To all whom it may concern, that an application has been received from Mr. Basnir Ahmed Khan praying for permission to transfer his rights and interests in respect of Stall No. 23 in Block "A", Sir Stuart Hogg Market to Messrs. Kanai Lall Shaoo, Basudeb Shaoo and Ajit Kumar Mahinder.

Objections, if any, to this application should be submitted to the undersigned within 15 days from date hereof.

A. QASIM,
Revenue Officer.

S. S. Hogg Market,
The 11th February, 1941.

To all whom it may concern, that an application has been received from Sk. Abdur Rashid, recorded occupier of Stalls Nos. 67—68 in Block "D", in the Sir Stuart Hogg Market for permission to take in Mr. Rup Narayan Saha as his partner in business carried on in the stalls.

Objections, if any, to this application should be submitted to the undersigned within 15 days from date hereof.

A. QASIM,
Revenue Officer.

S. S. Hogg Market,
The 10th February, 1941.

To all whom it may concern, that an application has been received from Mr. Amrita Krishna Mukherjee praying for permission to transfer his rights and interests in respect of Stall No. 20 in Block "R", S. S. Hogg Market to Mr. Jagat Bandhu Nath.

Objections, if any, to this application should be submitted to the undersigned within 15 days from date hereof.

A. QASIM,
Revenue Officer.

S. S. Hogg Market,
The 12th February, 1941.

Road Land Closed.

It is hereby notified for the information of the public, that in pursuance of a resolution, passed by the Corporation, at their meeting held on the 7th January, 1941, in exercise of the powers vested in them, under Section 306 of the Calcutta Municipal Act III (B.C.) of 1923, the portion of Corporation road land forming part of Middle Road, Entally, measuring about 17½ sq. ft., encroached upon by and sold to the adjoining owner of premises No. 5/A, Middle Road, Entally as per plan prepared in this behalf and thereon coloured green has been permanently closed with effect from the date of the Corporation resolution noted above.

J. C. MUKERJEA,
Chief Executive Officer.

Central Municipal Office,
The 13th February, 1941.

Notice To Lawyers.

Lawyers practising in the different courts of Calcutta are hereby requested to take out their professional licenses for the year 1940-41, by the 28th February, 1941, on payment of the assessed demand. For facilities of collection, License Inspectors will attend Courts on every alternate day. Lawyers practising in more than one court will kindly let me know beforehand from which address they prefer to pay their license fees as otherwise they run the risk of being assessed in all the courts where they do their professional work. If however, the license is not taken by the above date I shall be most reluctantly obliged to file prosecution against defaulters.

S. GHOSHAL,
License Officer.

Central Municipal Office,
The 24th January, 1941.

Sound Plumbing means health and longevity

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—
10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.
Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

A. QASIM,
Acting Supdt., S. S. Hogg Market.

Chronicle & Comment

New York Census

In view of the census operations now in progress in Calcutta, it is interesting to note the preliminary figures of the Census of 1940 in the City of New York recorded in December last. It gave New York a total population of 7,380,259, which, we are told, is an increase of 6·5 per cent. over that of 1930. That is a much smaller increase than in any former decade. However, in most of the ninety-four cities over 100,000 population in the United States there is a slowing down of growth, and the rate for the whole country is 7 per cent.

Among the metropolitan cities, Miami, Florida, showed the largest increase with 54·4 per cent, while Washington, D. C., had a growth of 36·2 per cent., and Los Angeles increased by 20·9 per cent. Half of the twelve large cities in the country lost in population, but though industrial centres lost ground relatively, urban dwelling as a whole has increased.

If we look back 150 years in the City of New York, we can scarcely believe the population in 1790 was only 49,401. A hundred years ago the New Yorkers numbered 391,114, and the million mark was not reached until 1860. In 1890, the City had a population of more than two million, and in each succeeding decade it grew by a million or more. Those phenomenal increases make this decade's growth of six and a half per cent. seem small indeed. Two important causes for the slowing down are said to be lowered birth rate and curtailed immigration, and owing to them the average age of the population is rising.

The list of America's twenty-five biggest cities has changed somewhat. In general, it includes the same cities as in 1930 with New York far in the lead as formerly and the next five in size maintaining their same rank. Baltimore went ahead of St. Louis to seventh place, Washington is now eleventh in size, Indianapolis and Huston and Denver forge ahead, while Jersey City and Portland, Oregon, are crowded out of the list of twenty-five biggest cities.

Acharya Prafulla Chandra

It is a privilege and an honour to be able to offer homage to our venerable scientist-seer, Acharya Prafulla Chandra Ray, on the occasion of his 80th birth-day. Acharya Ray is the pioneer of Chemical Industries in India. To him India owes the outlook and the impetus for modern scientific chemical industries.

In order to celebrate his 80th birth-day it has been decided, in consultation with the admirers, co-workers and pupils of Acharya Prafulla Chandra, to hold an Exhibition of Chemical and Pharmaceutical Industries in India by the Commercial Museum of the Corporation of Calcutta. Such an Exhibition is sure to give real joy and delight to the venerable scientist as a picture of the partial fulfilment of his dreams.

A meeting of leading chemists and chemical industrialists in the city was held recently under the auspices of the Commercial Meseum to form an Advisory Board for the proposed Exhibition to make the whole show worthy of the occasion. Dr. B. C. Guha, Ghose Professor of Applied Chemistry, University College of Science, Calcutta, has been elected Chairman of the Board and under his guidance the whole programme of the Exhibition will be shaped and developed.

Every effort will be made to develop special characteristics of this Chemical and Pharmaceutical Exhibition. It shall embody a retrospective survey of the achievements already scored; it will also delineate the prospects of potential industries in India. It will be an exhibition of newer types of chemical and pharmaceutical products prepared on scientific lines and preferably from indigenous materials. The Exhibition will be an index of the success of our efforts in developing chemical and pharmaceutical industries so as to mitigate our tragic dependence on imports from foreign countries and of our efforts to utilize Indian resources and material in the interest of indigenous industries and the economic welfare of the country. Acharya Ray has inculcated a real spirit of research for the development of chemical industries in India. The spirit of research is his permanent legacy to India. So the organisers have decided to devote a special section in the Exhibition to demonstrate and popularise the scientific investigations having industrial possibilities which are being conducted in the different laboratories of the Universities and in other Technogical and Scientific Institutes in India. Endeavours will be made to have a careful and representative selection and to give preference to those products which are prepared at least largely from indigenous materials.

The Exhibition will have eleven sections :—

1. A historical survey of the evolution of the Chemical Industries in India since 1890.
2. Exhibition of chief products—heavy chemicals, acids and alkalies.
3. Drugs and drug sources.
4. Vegetable and forest products other than drugs.
5. Minerals and their products.
6. Coal and by-products.
7. Marine products: fish oils, weeds: etc.
8. Synthetic products other than drugs.
9. Fuel Research.
10. Research exhibits from laboratories.
11. Miscellaneous.

We need hardly add that the success and quality of the Exhibition depends on the hearty co-operation of chemists and chemical concerns all over India and careful selection on the part of the organisers of the items to be exhibited.

Corporation Technical Advisory Board

The most laudable move on the part of the Mayor, Mr. Abdur Rahman Siddiqi, to form a scientific and technical advisory board to assist the Calcutta Corporation is about to materialise. Under his auspices it is proposed to appoint such a board to advise the Corporation in all the technical and scientific matters it is to deal with from time to time, consisting of 19 members including leading educationists, physicians, scientists and experts. The board will function as a central body with nine sub-committees operating under it. These sub-committees are :—

A sub-committee for the care of the sick, the prevention sub-committee, maternity and child welfare sub-committee, sanitary sub-committee, physical fitness and recreation sub-committee, food and nutrition sub-committee, education sub-committee, water-supply sub-committee and mosquito control sub-committee.

The function of the Central Board will be to co-ordinate the suggestions and recommendations to be made by the various sub-committees and to frame final proposals for the consideration of the Corporation.

On the Central Board the Corporation is represented by the following nine members: The Mayor, the Chief Executive Officer, the Health Officer, the Chief Engineer, the Education Officer, the Health Publicity Officer, the Secretary and the Chairmen of its Mosquito Control and Water-Supply Sub-Committees.

THE BENGAL BUDGET: 1941-42

Further Taxation Foreshadowed

The Budget Estimates of the Government of Bengal for 1941-42 were presented to the Bengal Legislative Assembly on Monday last by the Hon. Mr. H. S. Suhrawardy. The estimates stand as follows :—

	Revenue Receipts.	Revenue Expenditure.	Deficit.
1940-41 ...	13,88,00,000	14,85,00,000	1,03,00,000
1941-42 ...	14,03,00,000	15,37,00,000	1,34,00,000

The opening balance of Rs. 192 lakhs will be reduced to Rs. 33 lakhs only due to Revenue Deficit of Rs. 134 lakhs and deficit from Capital and Debt Deposit Rs. 25 lakhs.

The Hon'ble Finance Minister said: "I hope I shall not be misunderstood or thought to be disturbing needlessly the peace of mind of potential tax-payers if I say that we shall have to explore still further means of increasing our revenues at no distant date."

All the estimates have been based on the assumption of the passage of the Sales Tax Bill. If the Bill be not passed "it would of course be necessary to subject the whole budget to drastic reductions, reductions that will not only paralyse any attempts to extend our beneficent activities but will seriously jeopardise the continuance of a number of essential services now in operation."

The other members of the board include: Dr. K. L. Choudhury, Dr. R. Ahmad, Dr. J. C. Roy, Director of the Indian Institute for Medical Research, Dr. Ayengar, Mr. B. Ghosh, Prof. B. S. Guha, Prof. M. N. Saha, Dr. Basir Ahmad of the School of Tropical Medicine, and Mr. S. C. Mitter, Director of Industries.

The proposal for appointing the Board will come up before the next meeting of the Corporation.

The Safety Of Pedestrians

Correspondence has recently been exchanged between the Government of Bengal and the Corporation of Calcutta on the vexed and longstanding question of providing safety for the pedestrians of Calcutta, the Government of Bengal of late drew the attention of the Corporation of Calcutta to this issue and explained that the motor traffic control lines were being painted at all important crossings, stops and parking places by the Government with the help of the police staff. In Rangoon, the Government state, the cost of providing island and shelters and of painting pedestrian passages in the streets was borne by the Municipal Corporation. The Corporation of Calcutta, the Government pointed out, saved annually a sum of Rs. 4,50,000 from the proceeds of the tax on motor vehicles, and in the opinion of the Government of Bengal the work of painting and maintaining the traffic control lines in the streets of Calcutta should be undertaken by the Corporation. The estimated annual recurring cost of the work was about Rs. 7,500.

Giving an *ad interim* reply to the Government Communication, the Chief Executive Officer of the Corporation stated that the question raised many disputed points which required classification and settlement. Both the traffic and the Motor Vechicles Tax revenue have considerably increased since the amount of Rs. 4,50,000 was fixed by the Government as the share of the Corporation in the tax. But in spite of repeated representations by the Corporation the amount has not been increased by the Government. It is very doubtful whether the Corporation will, in the circumstances, agree to further expenditure being incurred by them in this connection.

Grants To Hospitals

The Health Officer of the Corporation of Calcutta has proposed that bacteriological examination of enteric and dysentery patients before they are discharged from hospitals should be the condition of any grant to be sanctioned in future to the various hospitals in the city, in order to enable the Corporation to follow these patients up and take necessary action to prevent spread of infection.

This proposal has been made following a Conference of District Health Officers held recently.

The Health Officer further suggests that the bacteriological examination of the patients of infectious diseases, treated by private registered practitioners, be done free at the new laboratory of the Corporation with a view to finding out carriers, so that necessary action may be taken by the Health Department.

Making the suggestion, the Health Officer observes that the present system is that patients are discharged from hospitals as soon as they become convalescent, but of these patients a certain percentage becomes carriers and as such a source of danger.

It is to be hoped that the hospital authorities in Calcutta will co-operate with the Health Officer in the way suggested.

Bicycle Safety Clubs

A very successful method of teaching future automobile drivers something of the principles of traffic regulation has been developed in Cincinnati, Ohio. Early in 1939 the police department undertook a programme of safety education which had as one of its principal phases the organisation of bicycle safety clubs throughout the city. To be eligible for membership, a boy or girl, who may be either a bicycle rider or owner, must sign a pledge covering nine cardinal safety rules of the club. A group thus formed chooses its own officers and may organize its own bicycle traffic court, with a judge and prosecutor, to enforce safety rules.

At the present time 84 per cent. of Cincinnati's bicycle riders are affiliated with police-sponsored bicycle safety clubs. A noticeable improvement in the conduct of bicyclists using the streets has resulted. It is particularly significant that of 1,640 infractions of bicycle traffic regulations recorded by the city police during 1939, over 80 per cent. were committed by riders who were not members of any club. This year over 90 per cent. were committed by non-club members.

INCOME OF PORT OF CALCUTTA

1941-42 Estimates

The total income of the Calcutta Port Commissioners for 1941-42 is estimated at Rs. 2,92,52,501 and the total expenditure at Rs. 3,04,26,103, showing a deficit of Rs. 11,73,602.

These are the main features of the Budget Estimates for 1941-42 submitted by Sir Thomas Elderton, Chairman, Calcutta Port Commissioners, at the Special Meeting of the Commissioners on Monday last.

After dwelling on the salient features of the revised estimates for the current financial year, Sir Thomas referred to the Budget Estimates for 1941-42, and said: "The estimates of income from charges on goods, vessels and railway have been based on the assumption that traffic throughout the year will be on about the same scale as during the period from June to November, 1940, but allowance has been made for importation of Burma rice continuing during April and May and for increased income from storage charges. The income from goods, vessels and railway has been put at Rs. 247,77,750 and the total income of the year at Rs. 292,52,501.

The total expenditure has been estimated at Rs. 304,26,103. The provision for maintenance and repairs has been reduced to Rs. 22,76,275 and some works which would ordinarily have been carried out have been omitted. There is little chance of effecting any material saving against this provision except in one case. As the Commissioners are aware extensive repairs to No. 1 Dry Dock, Kidderpore Docks, are now being carried out. No. 2 Dry Dock is also in need of repairs costing about Rs. 90,000, and it is proposed to carry out the work immediately No. 1 is finished as the necessary plant and gear will be at the site. The repairs to No. 1 Dry Dock are essential, but the repairs to No. 2 although desirable could be postponed and it may be necessary to defer them if the need for Dry Dock accommodation is urgent.

THE WEEK IN THE CORPORATION

A SHORT RECORD OF THE MORE IMPORTANT DECISIONS OF AND DISCUSSIONS AT THE CORPORATION MEETINGS FOR THE WEEK ENDING FEBRUARY 21, 1941

[The reports of the meetings of the Corporation appearing below are, in most cases, a summary of the proceedings.—Ed., "C. M. G."]

THE THIRTY-SECOND ORDINARY MEETING OF THE CORPORATION HELD ON WEDNESDAY, THE 19TH FEBRUARY, 1941

Councillor Speller Resigns

The meeting accepted with regret the resignation by Mr. J. H. Speller of his seat in the Corporation. Leaders of different groups in the House paid tribute to Mr. Speller's devotion to duty and his interest in civic affairs.

New Councillor

Mr. W. R. Humphrey was sworn in as a Councillor of the Corporation of Calcutta in place of Mr. G. S. G. Vernon, who has resigned.

Mosquito Control Department

The resignation tendered by Councillor Jogesh Chandra Ghose of his seat on the Mosquito Control Department Working Special Committee was accepted and Councillor Jogendra Nath Mandal was appointed in his place.

Disapproval

When the recommendation of the Services Standing Committee No. II, (dated the 23rd September, 1940) sanctioning the continuance of the temporary post of a clerk on Rs. 40 per month in the Education Department, from the 5th August, 1940 till the end of November, 1940, came up for confirmation the House expressed its "disapproval of the growing practice of bringing up proposals for continuance of temporary appointments before the Corporation long after the term of such appointments has expired."

"Lane" Changed Into "Street"

On the recommendation of the District Standing Committee, District No. IV, the portion of Iswar Ganguli *Lane* (Kalighat) between Russa Road and Sadananda Road was named as Iswar Ganguli *Street*.

Dr. Dey's Outfall Scheme: D. W. F. Channel

Emergency "Kutcha" Channel To Be Constructed

A RECOMMENDATION by the Works Standing Committee to sanction a sum of Rs. 1,82,000 for the construction of an emergency *kutcha* channel from Bantola to Kulti in connection with Dr. B. N. Dey's Drainage Outfall Scheme was accepted by a majority of votes.

It may be recalled that the Government of Bengal had sanctioned an estimate amounting to Rs. 10,17,500 for the construction of the—Dry Weather Flow Channel—more or less 17 miles long from Bantola to Kulti, as provided in Dr. Dey's Outfall Scheme, to carry the daily sewage from the city. The Storm-water Channel in connection with the Main Drainage Scheme has been excavated. According to Dr. Dey if the Dry Weather Flow is allowed to pass through the Storm-water Channel, then it will lead to the conversion of the latter—which is in fact a big reservoir—into a cess pool.

With the Bidyadhari practically refusing to take the city's sewage and the Storm-water Channel being unavailable for the sewage discharge the D. W. F. Channel is, the Chief Engineer maintains, an urgent necessity. If Calcutta sewage is to avoid stagnation, the Chief Engineer suggests an emergency *kutcha* channel from Bantola to Kulti should be excavated on an urgent basis, with provision to incorporate the same in the finished profile when funds will be available.

The Committee's recommendation read :—

(i) This Committee having further considered the matter, taking into consideration the letter from the Superintending Engineer, Southern Circle, dated January 8, 1941, are now satisfied that the emergency channel suggested by the Chief Engineer should be excavated on an urgent basis. This *kutcha* channel has received the approval of the Government Engineer.

(ii) That pending release of funds, the estimates amounting to Rs. 1,82,000 be sanctioned, the draft specifications be approved and tenders be called for on short notice.

Opposing the Committee's recommendation, Mr. Hamoodur Rahman described the project as a camouflage and hopeless bungling on the part of the department. It was camouflage because the original plan was to have a *pucca* channel from Bantola to Kulti. Now they were told that it was a very urgent piece of work. He recognized that there might be certain works which could not be kept back and which, if necessary, had even to be financed from loans. But he refused to believe that the proposed channel fell into that category and that they must immediately spend Rs. 1½ lakhs on it. He maintained that it would be absolute waste of money because it was his conviction that it would be impossible to convert the *kutcha* channel into a *pucca* channel without re-excavating it.

Quoting from the letter of the Superintending Engineer, Southern Circle, Mr. Rahman said that that officer had suggested the construction of a narrow channel from Bantola to Bamanghatta and from there the sewage to be discharged into the Storm-water Channel. That was precisely what the Chief Engineer (Dr. Dey) intended to do. He did not understand why if at present the sewage could be discharged into the Storm-water Channel, the same could not be done at a later stage without impairing the utility of the channel.

Mr. Rahman said further that in the past they had found the Chief Engineer's estimates in respect of various works wrong by a very wide margin. Giving some alleged instances of such excess estimates he pointed out that the revised estimates for the Outfall Scheme already showed an excess of Rs. 10 lakhs. He suggested that the same might occur in respect of this channel also. The estimates might very well increase and on the top of that they would be asked to sanction Rs. 18 lakhs for the *pucca* channel.

Mr. Rahman characterised the scheme as a camouflage on the part of the Chief Engineer and said that this was hopeless bungling by the repositary of their engineering knowledge.

If the Bidyadhari had become defunct and was unable to carry the sewage of the city then the Corporation must consider ways and means to have this sewage cleaned. But they must not bungle from scheme to scheme and must not waste the rate-payers' money.

Mr. Rahman moved an amendment that the matter be referred to a committee of experts of whom two must be independent outside experts. He suggested the names of Sir M. Visvesvaraya, the Executive Engineer, Irrigation Department, Government of Bengal, the Chief Engineer, Calcutta Corporation and the Executive Engineer, Drainage.

Mr. B. N. Roy Chowdhury supported the amendment of Mr. Hamoodur Rahman and said that a committee of experts would in all probability suggest a saving of the Corporation's money.

Mr. N. C. Chatterjee said that they, the Councillors, had got the prerogative to pass judgment over their expert. As a matter of fact, Mr. Hamoodur Rahman had exercised that prerogative. He had used strong language, and Mr. Chatterjee had taken down some of the words. Mr. Rahman used "Engineer's camouflage, wanton waste and hopeless bungling, entire waste and so on." But they knew that filth was accumulated in the outskirts of the city. What were they going to do to tackle this nuisance?

Mr. Chatterjee said that sheer necessity drove them to accept the scheme which had been put forward and unanimously sanctioned by all groups representing the Works Committee. Responsible men like Mr. F. G. Watson and Mr. Naresh Nath Mookerjee and others were in favour of this scheme. What was clear was that the river Bidyadhari was stagnating and not co-operating in taking the city's sewage. They must stop the diversion of the sewage and silting of the Storm Water Channel, which was excavated at a cost of more than 10 lakhs of rupees. The city, Mr. Chatterjee said, was going to lose the value of 10 lakhs of rupees which was spent on that channel unless they did something for it. He said it would be criminal negligence if they allowed any more time to be wasted for the opinion of experts. He said what Mr. Watson had expressed after going through relevant papers in this connection. It appeared to Mr. Watson that the Superintending Engineer, Southern Circle, was emphasising the fact that there was no other means of getting rid of the city sewage except by having a *kutcha* channel.

What Mr. Chatterjee wanted to say was that Superintending Engineer did not say that they had only to do the work partly. They had got to excavate the whole of it. If the Corporation had resources, certainly they would have paid 8 to 9 lakhs of rupees. So they must do what could be done under the circumstances.

Mr. M. A. H. Ispahani intervened saying: We must not throw away the money.

Mr. Chatterjee: No throwing away of the money: You must have misunderstood the scheme. Mr. Chatterjee said that he had started by saying that Mr. Hamoodur Rahman had been badly briefed. The latter, according to Mr. Chatterjee, had been given misleading figures. Referring to his remarks about the Chief Engineer, Mr. Chatterjee characterised them as unfair. It was wrong to make out a case against any officer. He could say that there was no inflation of the estimate and that there had been no such bungling. Apart from Dr. Dey's filial affection for his own scheme, opinions of persons like Mr. F. G. Watson and Mr. W. A. Burns should not be ignored. They were satisfied that this ought to be done and it must be done. Forces of circumstances were such that no further time should be allowed to be wasted.

Mr. W. A. Burns said that the *kutcha* channel, as he understood it, was a necessity and could not be avoided. As regards Mr. Rahman's references to excess estimates, Dr. Dey had appeared before the Finance Committee and he (Dr. Dey) had asked for time to examine them.

So far as the scheme itself was concerned, he (Mr. Burns) was in favour of it. But he was not satisfied why the fact of the Bidyadhari dying could not have been forseen and why they should have been confronted with this matter as an emergency.

Mr Madan Mohan Burman said that the disposal of the sewage of the city was of the utmost importance and the Dry Weather Flow Channel was a necessity. He said that the *kutcha* channel should be excavated before the rainy season came and therefore no further time should be wasted by appointing any committee of experts.

Mr. N. M. Dalal said that he did not see any reason why this scheme should not be scrutinised by outside experts as suggested by Mr. Rahman.

Mr. Naresh Nath Mookerjee said that they should consider this question from an impartial point of view. Mr. Hamoodur Rahman said that it would be a sheer waste of money if they now spent this amount for construction of a *kutcha* channel. He perhaps believed that they would have to spend another 10 lakhs. But that was not so. He was afraid Mr. Rahman had not gone carefully into the discussion of the Committee. They considered the question very carefully. What this scheme proposd to do was to cut only a portion of the Channel which was originally sanctioned. The amount of Rs. 1,82,000 would be only the first instalment in the execution of their main project of constructing a 17 mille *pucca* channel. There could not be any question of waste.

That the matter was urgent, said Mr. Mookerjee, was clear from the report of the Government Engineer which had been circulated. What remained was the sanction of the Government. They were aware that they could not undertake any scheme without the sanction of the Government. The Government Engineer had already given his formal assent in the form of a letter and the matter of obtaining assent from the Government was a matter of formality and he hoped it would come in due course.

Mr. Mrigendra Kumar Majumdar said that in the year 1919 or thereabouts when the question of finding a solution to the City's drainage problem became very acute, Mr. Wilkinson, the then Executive Engineer, Drainage was asked by the Corporation to frame a scheme providing for efficient discharge of city sewage and storm water. Mr. Wilkinson accordingly prepared a scheme, which was turned down on the ground of prohibitive cost. Subsequently the Corporation asked Dr. Dey to frame a scheme, which he did. This scheme was fifty per cent. less expensive than the scheme originally advocated by Mr. Wilkinson. After mature deliberation the Corporation sanctioned Dr. Dey's scheme, which was popularly known as the Main Drainage Extension Scheme. That was many years ago. Since then a lot of work on the project had been carried out, and it was now too late in the day to pick holes in Dr. Dey's scheme. He thought that the objection referred to the project for excavating a *kutcha* channel as an emergency measure would not bear a moment's scrutiny. It was really a case of "Hobson's choice," and they had no other alternative but to accept it.

Mr. Debendra Nath Mookerjee said that after what had fallen from Mr. N. C. Chatterjee he had nothing more to add except to say that under Section 251 (1) of the Calcutta Municipal Act it was obligatory on the Corporation to provide a safe and sufficient outfall in or without Calcutta, for the proper discharge of the storm water and sewage of Calcutta in such a manner as would not cause any nuisance, whether by flooding any part of Calcutta or of the country surrounding the outfall, or in any other way. Now, apart from the reports of the Chief Engineer and the Outfall Engineer, if they referred to the letter of the Superintending Engineer, Irrigation Department, Government of Bengal, they would find that the present situation is such that the Corporation had no other alternative but to excavate this *kutcha* channel for the purpose indicated in the aforesaid Section. As a matter of fact, the Chief Engineer had made best endeavours in the past to discharge city sewage into the Bidyadhari, and the result was that the effluent welled over and inundated the river bank and the environs, thereby causing abominable nuisance in the locality.

The amendment of Mr. Rahman was declared *lost*.

Another amendment of Mr. D. J. Cohen suggesting that urgent steps should be taken to obtain Government sanction in the matter and that the project should be taken up in hand after the Government sanction had been received was negatived by 26 to 34 votes, 4 not voting.

The original resolution sanctioning the construction of the *Kutcha* Khal was passed by the House.

Mr. M. A. H. Ispahani rising on a point of order enquired of the Mayor if it was legal for the Corporation to proceed with the excavation of the channel without previously obtaining the sanction of the Government in the matter.

The Mayor (Mr. A. R. Siddiqi)—There is no rule existing which can stop the Corporation from going along with any project which it wishes to take in hand. But as a matter of practice, in order that the Corporation may not be taken to task later on, the Executive has not taken any action until the approval of the Government has come, but so far as I can see at present there is no law forbidding us . . . . .

Mr. Ispahani: May I have an assurance that the Executive Officer will not take any action in the matter without obtaining the sanction of the Government?

Mr. N. C. Chatterjee: I object to this point of order.

The Mayor: The wishes of the House have been expressed. What action the Government will take and how the Executive will behave is for these two parties to decide. So far as the decision of the House is concerned, it is the will of the House that the project shall be taken in hand. If the Executive Officer can defend himself, if the Government wishes to interfere, that we shall see later on.

Mr. W. A. Burns also thought that there was some legal bar against the excavation of the channel without the prior sanction of the Government.

Mr. N. C. Chatterjee: Why do you assume that the Government should be so cussed as to oppose the considered opinion of the House?

The Mayor said that the question was to be decided by technicians in law and engineers but the House had decided in favour of constructing the channel.

Mr. Ispahani: Will you have it recorded that members of our group (Moslem League) have voted against the project? If there is surcharge, we will not be responsible.

Mayor: The voting is already on record.

PRIMARY (MAKTAB) FINAL EXAMINATION, 1940

C. F. P. School Stand First

Master Ajit Kumar Chakravorty of the C. F. P. School (Boys') at 1, Nilmoni Mitter Row, Tala, Calcutta, has secured a Government Scholarship of Rs. 3 per month, standing first, in order of merit, in the Primary (Maktab) Final Examination of 1940.

Municipalities In U. S. S. R.

[By S. Upadhyay]

THE life of the civilised world is divided between the city and the village. There is difference between the two, though the difference is of recent origin. Only a century back people began moving towards the city; small towns grew into cities; obscure villages were studied with industrial plants. Life in the city became more secure and village was dreaded. There was a growing tendency to forget the villager's life and waste and degradation. More intelligent, better circumstanced, the city people banded together to protect health and hygiene and municipal system came into being. And today this system functions all over the world in different forms. The evolution of the municipal system in bound up with the progress of industrial civilization, and present day municipal system maintains difference between the town and the village. Only in Soviet Russia the difference no longer exists. To the Soviet Republic, the true wealth of nation is in the life of its people, and if that life is perishing in sunless slums and fetid hovels the country is doomed even though forests of mill chimneys spring up over every valley and plain. It was this sense of overshadowing importance of human life that proved to be the guiding force behind the activities of the Republic.

Soviet municipalities are run altogether on different principles. Representation on the municipal board is well-balanced and representatives of all local organizations are on it. The municipal board is composed of the delegates of the Red Army, local Soviets, trade unions, factory committee, etc. Working of municipalities is indirectly controlled by the Soviet for each scheme has to be sanctioned by the Soviet. Municipal affairs are discussed in the open session of the urban Soviets, and the venue is very often the working class area. This is done to ensure greater amount of independence of action in municipal affairs.

Broadly speaking, the work of municipalities is twofold; economic and cultural. Municipalities work for the cultural and economic advancement of each area, settle all local problems, and execute the decision of the higher authority. Various public utility services are run by the municipalities. Of these tramways, electricity, water are important; these fetch extra income; only a small portion of it is retained by the Soviets; the rest is spent on the furtherance of industries.

Soviet municipalities are autonomous units and have their laws and bye-laws are, and in matters of general interest Republic laws, applied. Town planning, house buildings, electricity are not within the province of urban Soviets, these are planned by the Republics and executed by the urban Soviets.

The nature of municipal work being complex the State wanted to co-ordinate the activities through the medium of a central organization. In 1931 the *All Union Central Executive Committee* came into being, and this works as leverage all over the Soviet Republic. Town planning is linked up with the Peoples' Commissar. The State Planning Department under the Peoples' Commissar is composed of experts who examine the question of planning and supervise the work.

The Revolution changed much in the life of Russia. It was convulsion without previous parallel in history. The country was swept by the tide of Revolution; cities were depopulated and lay wasted. Human beings crawled in the streets and they needed habitation quarters. So in the post-Revolution period the attention of the State was focussed upon the problem of housing. There being no adequate provision for housing under the Tsarist regime, the working class was badly housed. They were captives to perennial squalor and filth. They were huddled in small huts and lived like worms. The state started reconstruction and expansion.

"The town planning is based upon the fact," writes Prof. D. Akin, "that the municipal economy in the U. S. S. R. is the sole property of the city or town and does not belong to various private interests. The unification of municipal building plans and extensions of urban districts enable the best possible distributions and undertakings, residential districts, open spaces and public buildings to be catered for and at the same time this rationalization constitutes a vital factor in architecture.

The plan of reconstruction is based upon: (1) Maximum co-ordination between the interests of industry and residential interests; (2) maximum development and properly planned distribution of public institutions affecting residential lives; (3) widespread incorporation of open spaces in the shape of wooded parks and gardens in the territory occupied by the city and (4) facilities for the best transport facilities.

During these years of the Soviet regime approximately 650 square million feet of housing accomodation have been completed in towns and urban districts. The reconstruction of Central Asian and Siberian cities is a distinct achievement of the Soviet regime. Cut off by lands and mountains, the Central Asian region was an agrarian country. Life was feudal in character and appearance. Industrialization combined with collectivization has worked revolutionary changes in life, and the primitive Eatern Settlement is transformed into the modern towns by the Soviet regime.

Besides all these, work of municipal reconstruction of big cities should be mentioned. Of the big cities Moscow, Leningrad, Sverlovsk have been thoroughly remodelled and reconstructed in recent years. Moscow enjoys the rare privilege of being a harbour as well as a railway junction. The Moscow Volga Canal connects the city with the outside world. The Moscow Underground Railway is genuine work of Art. It is symbolical of the joy of life and labour inspired by the ideal of social good. The idea of service to mankind has been the keynote for the expansion of municipal works in Soviet Russia.

Russell Street And Some Others

[By B. V. Roy, M.A.]

[Calcutta is now over 250 years old and its streets and roads number nearly 2,000, but no organised attempt has yet been made to compile any history of its Street Name. It is a pity that the Corporation of Calcutta has not yet appreciated the interest and the importance of such a history, and that a history of Calcutta Street Names would in effect be a history of the City itself, its great men—their social, political and other activities, its institutions, temples, groves, its humbler people, in fact the various facets of a growing city through the length of two and-a-half centuries. That fascinating writer on Old Calcutta, our popular contributor, Mr. B. V. Roy presents in this article our readers with a picture of days gone by as reflected in our Street Names, from which it will be seen how the history of Street Names is intertwined with the history of the city.—Editor, *"C. M. G."*]

RUSSELL Street, in Ward 16, runs south from Park Street near its Chowringhee end, and is named after Sir Henry Russell, who succeeded Sir William Dunkin as Puisne Judge of the Supreme Court in 1797. On the retirement of Sir John Anstruther, he was promoted to the office of Chief Justice in 1806, which he held till 1818. Russell used originally to reside in a portion of the "New Court House" in Esplanade Row, but removed later to a house in the street which now bears his name, but which was unnamed at the time and formed part of the "district" of Chowringhee, as will appear from the following notice which appeared in the *Calcutta Gazette* of 22nd November, 1798 :—

> "Sir Henry Russell presents his compliments to the gentlemen educated at the Charter House School, and requests the honour of their company at Dinner at his House at Chowringhee on Wednesday the 12th December, at 5 O'Clock, to celebrate the anniversary of Founder's Day."

This house stood on the site covered by Nos. 12 and 13, Russell Street and is now the property of the Royal Calcutta Turf Club. A portrait of Sir Henry Russell by the well-known English Artist George Chinnery hangs on the walls of the Session Court. It shows him garbed in his Judicial red robe, and its history is interesting. The portrait was painted in 1806 or 1807, and its cost was raised by subscription among the "Native Inhabitants of Calcutta," who presented Russell with an Address on the 29th October, 1806. In the Address the doners felicitated him on his appointment as Chief Justice of the Supreme Court of Bengal, and they also belauded his "care and vigilance in establishing a pure administration of Justice" and wound up with asking his permission to place his portrait "in the Court House for the present and afterwards in the Town Hall when that building may be ready for such purpose." The Address bears the signature of 28 persons who were the principal Indian inhabitants of Calcutta at that time and is, therefore, of extra ordinary interest as a guide to Calcutta society in the beginning of the Nineteenth Century. I give below a list of the signatures spelled as they appear on the Address followed by short notes on the identity of each, for which I am indebted to my friend Rai Bahadur Pramatha Nath Mullick's notes, and that extremely valuable source of information on all old Calcutta topics—"Bengal Past and Present."

(1) Maharajah Sookmoy Roy Bahadur.
(2) Maharajah Rajcrishna.
(3) Shamol Doss Baboo.
(4) Sham Charan Baboo.
(5) Gopee Mohan Baboo.
(6) Hurry Mohan Thacor.
(7) Ladlee Mohan Thacor.
(8) Nilmoney Mullick.
(9) Ram Lochan Mullick.
(10) Roop Chand Roy.
(11) Lalla Crishna Chander Baboo.
(12) Muddun Gopaul Bose.
(13) Juggernauth Pershaud Bose
(14) Boro Moharaty (widow of Maharajah Mokund Bullub).
(15) Cossi Nauth Dutt.
(16) Gockool Chunder Mitter.
(17) Roy Ram Soonder Mitter.
(18) Chaitanya Charan Sett.
(19) Nundo Laul Sett.
(20) Brindabun Bysack.
(21) Baidyo Nauth Mukapadya.
(22) Pritiram Monna.
(23) Ram Sebuck Mullick.
(24) Nilmoney Mitter.
(25) Rajah Deby Singh.
(26) Maharajah Udwanta.
(27) Maharajah Kirti Chand, and
(28) Nabab Wassick Ally Khan.

I shall now take the names in their serial order for the notes regarding their identity :—

(1) *Maharajah Sookmoy Roy* was the grandson (daughter's son) of Lakshmi Kanta Dhur, popularly known as "Naku Dhur," who was one of the Subarnabanik Bankers, who followed Job Charnock from Hooghly to Sutanati and helped the English in many ways, mostly with financial assistance, and was the founder of the "Posta Raj" family.

The entertainments given by Maharajah Sookmoy on the occassion of the Durga Puja formed the subject of many notices appearing in the *Calcutta Gazette* of the time, and were on a gorgeously lavish scale, to which many Europeans were invited. Generally "nautches" by well-known "Bai-jees" were an indispensable item of these entertainments

Sookmoy's descendants have, for three successive generations, taken part in Calcutta's Municipal

affairs, *viz.*, Raja Dinendra Narayan Roy who was a "Commissioner" under the old regime, his son Kumar Rajendra Narayan was a Councillor and who was followed as a Councillor by his son Kumar Sailendra Narayan.

(2) *Maharajah Rajcrishna* of the Sovabazar family, was the son of Maharaja Naba Krishna or "Nub Kissen." Raj Krishna had eight distinguished sons, of whom the most prominent were Raja Bahadur Kali Krishna, Maharaja Kamal Krishna and Maharaja Bahadur Sir Narendra Krishna, K.C.I.E.

(3), (4), (5), *Shamol Doss*, *Sham Charan* and *Gopee Mohan* were the sons of Cossinauth Babu, Dewan to Lord Clive, who was reported, at the time of his death in 1792, to have been worth 60 lakhs of rupees. Cossinauth Babu purchased much valuable property in Calcutta from the famous merchant Hazari Mull (or Huzuri Mull) and was reputed to be the founder of the temple at Kalighat.

(6), (7) *Hurry Mohan* and *Ladlee Mohan Thacor* belonged to the well-known Thacor or "Tagor" family. Their ancestor Panchanan Thacor settled in Calcutta in the latter part of the 17th Century. His grandson Durponarayan Tagore was Dewan of the French at Chandernagore.

(8) *Nilmony Mullick* was reputed to be one of the wealthiest men in Calcutta of his time. His adopted son was Raja Rajendra Mullick.

(9) and (23) *Ramlochan* and *Ramsebak Mullick* both of the well-known Pathuriaghata Mullick family, ancestors of Rai Bahadur Pramathanath Mullick.

(10) *Roop Chand Roy* was a wealthy Banian of Barabazar.

(11) *Lalla Krishna Chandra*, grandson of Dewan Gangagobinda Singh, founder of the Paikpara Raj family. Later, he renounced the world and ended his life as a recluse in Brindaban, where he established a religious endowment. He was popularly known as "Lala Babu."

(12) *Mudun Gopal Bose*, son of Dewan Kristoram Bose, a wealthy salt merchant and also Dewan of Hooghly. Kristoram spent large sums in building temples in Beneras, and had an avenue of mangoe trees planted along the road from Cuttack to Puri for the benefit of pilgrims to Puri.

(13) *Jagannath Prosad Bose*, descendant of Dewan Nidhiram Bose of Baghbazar, married the daughter of Srihari Ghosh of Kantapukur, who was Dewan of the East India Company at Monghyr.

(14) *Boro Maharani* was the widow of Maharaja Mukund Ballab, the holder of the Puri Raj.

(15) *Cossinauth Dutt* was a descendant of Babu Ram Chandra Dutt, of the well-known Hatkhola Dutt family, who made a fortune as a Banian to the East Indian Company.

(16) *Gocool Chandra Mitter* was a salt speculator and amassed a great fortune. The well-known idol "Madanmohan" of the Bishnupur Raj was pledged to him for a lakh of rupees.

(17) *Roy Ramsunder* was the Dewan of the Company at the Patna Opium Factory. Mohanlal and Shamlal Mitter of Shambazar were his sons.

(18), (19) *Chaitanya Charan* and *Nundolal Sett* were the descendants of Jadabindu Sett, who with Brindaban Bysack (No. 20 in the list) were both well-known Banians of English firms. The Setts did a large business as purveyors of Ganges water in sealed jars. Ganges water, as is well-known, is largely required in Hindu households for *puja* purposes, and the Setts sent it out to distant parts of the country, their seal on the jar being accepted all over the country as a guarantee of genuineness.

(21) *Baidyanath Mookerjee* was Dewan to the East India Company. His son Lakshminarayan Mookerjee was Secretary to the Hindu College and his grandson Onocool Chandra was a Judge of the High Court.

(22) *Pritiram Manna* was the founder of the "Marh" family of Jaunbazar. He was Banian to Burn and Co., and was reputed to have made a large fortune by purchasing the zemindaries of Natore at a Collectorate sale for the small sum of Rs. 19,000.

(25) *Raja Debi Sing* was appointed Dewan of Bengal in 1773. He was the founder of the Nashipur Raj family in District of Murshidabad.

(26) *Udwanta Sing* was the nephew of Raja Debi Sing and the son of Raja Shitab Roy, Naib Subat of Behar. He was Dewan to Nawab Nazim Ali Jan from 1810 to 1821.

(27) *Maharaja Kirti Chand* was the Maharaja of Burdwan. His residence at Garden Reach was later sold to the *ex*-King of Oudh in 1859 for a lakh of rupees.

(28) *Nawab Nasik Ali Khan* was the Jagirdar of "Kurourroye" in District Hooghly.

From the foregoing notes it will be apparent that the leaders of India Society in Calcutta in the beginning of the 19th century were mostly men who had profited largely and amassed huge fortunes through their connection with the English either as Dewan or Agents to the East India Company or as Banians to English firms or in some similar capacity. To quote from "Mookerjee's Magazine", at this time "Calcutta was a new city without time-honoured tradition. It was simply, as Lord Ellenborough since styled it, the 'commercial capital of Bengal'. No high families, no individuals believed to be descended from the sun or moon settled there. Napoleon ridiculed the English as a Nation of Shop-keepers. It would not be untrue to describe Calcutta as a City of Shop-keepers. The most respectable of its inhabitants were merchants."

They acquired partners and also spent freely as is evidenced from occasional notices of their prodigality or munificance appearing in contemporary newspapers. Out of the 28 signatories to the Address presented to Sir Henry Russell, the following nine have their names commemorated in Calcutta streets, *viz.*, Raja Raj Krishna, Kashinath Dutt, Rupchand Roy, Brindaban Basak, Chaitan Set, Raja Woodmunt (Udwanta), Ramlochan Mullick, Ramsebak Mullick and Gokul Mitra. Besides these nine, I have had occasion to mention various other people in the foregoing notes, among whom the following have Calcutta streets named after them, *viz.*, Maharaja Kamal Krishna, Maharaja Sir Narendra Krishna, Raja Kali Krishna, Darpanarayan Tagore, Lakhinarayan Mukerjee, Mohanlal (Mitra), Shamlal (Mitra), (Sri) Hari Ghosh, Raja Dinendra, Rajendra Mullick, Kristoram Bose and Huzuri Mull.

HEALTH AND HYGIENE

"A man too busy to take care of his health is like a mechanic too busy to take care of his tools."—*Cicero.*

What The Patient Owes The Doctor

By
DR. MORRIS FISHBEIN
EDITOR
"Journal Of The American Medical Association
AND OF
"Hygiea": The Health Magazine

MOST people, when they think about doctors, think only about the doctors' responsibility to the patient. However, an eminent lawyer in California has recently prepared a scientific statement on the obligation which rests on the patient when he comes to the doctor, particularly if, at any time, the matter of the relationship of the patient to the doctor should get into the courts. One of the leading courts of North Carolina pointed out that all the obligation is not on the doctor.

The patient must obey the orders and follow the directions of the doctor. If he disobeys such orders or neglects such directions, he cannot hold the doctor to blame for such disobedience or neglect. In most instances where objection is made to the conduct of the doctor, the objection is due to the failure of the patient to follow instructions. The doctor who takes care of a patient is supposed to exercise the ordinary diligence and judgment of doctors in general. The patient must also not only follow reasonable instructions but exercise ordinary prudence as would be expected of a person in his position.

Another matter that has come before the Courts is the obligation of the patient who fails to return for a complete course of treatment when only a complete course of treatment can yield a useful result. This is particularly important in relationship to the treatment of venereal diseases. In fact, the courts have ruled that the patients who fail to return for complete treatment are guilty of contributory negligence. In other words, his own act has contributed to his injury.

Of course, a patient who fails to return because he finds himself not improving may go to another doctor for proper treatment and still maintain his status before the courts. In general however, negligence of a patient prevents any action on the part of the patient concerned with possible negligence of a doctor.

One of the most important questions which arises is the matter of injuries in relationship to operations. For instance, there are certain instances in which the doctor refuses to perform a demanded operation because he does not think it necessary or desirable. This refers particularly to so-called plastic or beauty operations. Evidence that patients have absolutely insisted on such operations may have some value before the Courts.

On the other hand, it must be remembered that there is nothing which forces a doctor to do an operation which he thinks unnecessary. In every such instance, obviously, there ought to be written statements by the persons concerned as to the exact questions involved and the various considerations considered in the decision to do the operation.

Fundamental to the practice of all medicine is confidence of the patient in his doctor. Equally important is confidence of the doctor in the patient. This constitutes what is known as the personal relationship between doctor and patient which all doctors consider to be fundamental to the best quality of medical service.

LATEST IN MEDICINE

NEW in the treatment of wounds is the direct application of sulfanilamide in solution. The drug is dissolved in what is called a hysiologic solution of sodium chloride, which means of a concentration similar to that of the blood. The sulfanilamide is added to the extent of 9.8 per cent, which makes a saturated solution.

In order to make certain that the sulfanilamide solution comes in contact with the wound surfaces, some physicians have suggested cleansing with hydrogen peroxide previously. The work is still in an early experimental stage but the results which are promising may find wide application under war conditions.

NEW in the treatment of headache is inhalation of practically pure oxygen, particularly in cases of so-called migraine or "sick headache." Apparently when the headache is of the sick headache type, there are about four chances in five that inhaling oxygen will bring relief. When the headache is due to some other causes, the chances are about one in three that the patient may be helped. Since oxygen inhalations should never be taken except under the advice and control of a doctor, studies will go on to establish conditions under which this technic may be widely used.

* * *

ALLERGY, or sensitivity, may affect any tissue or organ of the human body. It has been shown that nearly all the tissues of the eye may be disturbed by such reactions. Allergy tends to run in families. From 50 to 70 per cent. of the cases occur in people in whose families there are records of some sensitivity. Estimates indicate about 10 per cent. of the population are allergic to one thing or another.

* * *

Hypersensitivity in the eyelids is revealed by itching, redness, blisters, swelling, most likely to follow the taking of drugs of the type of quinine or the coal tar products to which some people may be especially sensitive. Others have these symptoms from contact with face powders or cosmetics. Sometimes poison ivy may affect the eyelids.

One woman who had repeated styes finally got rid of them by eliminating peanuts from the diet since she was especially sensitive to peanuts with disturbances of the resistance of the eyelids to infection. Redness of the white portion of the eye with inflammation may follow sensitivity to any one of a number of drugs, pollens, animal dusts, face powders, cosmetics or bacteria. That form of repeated inflammation of the eyes known as vernal conjunctivitis is now believed to be due to hypersensitivity in practically all cases.

SAVING SCULPTURES

Problem Solved By Calcutta Museum

The problem of saving the sculptures of the Archaeological section of the Indian Museum from "nature's pestilential breath," which comes upon these things as a disease "similar to leprosy," has been satisfactorily solved by the management of the Museum..

The "disease," which is caused by humidity present in a large proportion in the atmosphere of the province and creates a great havoc to sculptures, is now being successfully coped with by the authorities with the application of paper pulp and a chemical solution.

Some of the specimens of great historical importance and artistic value have already received this scientific treatment and have become immune from the "disease" for a few years to come.

The authorities hope that the method if adopted by other museums and private collectors of national relics, may help in preserving their collections for posterity.

—Municipalities In U. S. S. R.

(*Continued from page* 473)

In 1936, the Soviet Republic undertook the plan of radical reconstruction to be completed in 10 years. A number of historic buildings are to be preserved, while others would be remodelled or removed. The scheme provides for a number of thoroughfares to facilitate municipal transport, regulate distribution of public institutions. All industrial establishments are to be located outside the main part of the town. Large tracts of land are turned into public parks. The number of *Parks of Rest and Culture* are to be increased.

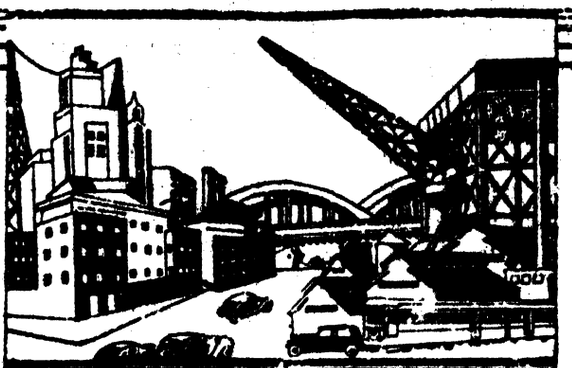
In the process of reconstruction new patterns of architecture have been evolved and these are really improvements upon the old. The important fact about Soviet architecture is the extensive application of technical science without the disastrous results of its being fashioned in the mechanical way. The old style though discarded is studied properly and the dictum of Lenin guides the architects :

The Culture of the new social order must inherit, examine and adopt all that is best and of value in the work of Humanity through ages.

POPULARISING INDIGENOUS GAMES

Deputy Mayor's Appreciation

The need for popularising indigenous games among the public was stressed by Mr. Phanindra Nath Brahma, Deputy Mayor of the Calcutta Corporation, presiding at the fifteenth annual gathering of the Nebutola "Kapati" Club held at St. James Square on the 9th February.



In presenting the Annual Report, the Secretary Mr. Pannalal Mitra said that the aim of the Club was to spread the cult of national games and to encourage the building up of sound health through games and physical exercises. Arrangements had been made in the Club for giving training in gymnasium and other acrobatic feats. A volunteer corps had also been formed with the members of the Club for the purpose of doing social service work.

The final of a shield tournament in "Kapati" was played before the spectators between the Nebutola "Kapati" Club and the Calcutta Hadu-du-du Club, the latter winning the game and the shield.

Miss Nirupama Ray Chowdhury a seven year old girl member of the club displayed remarkable physical feats. Her body-bending poses won the applause of all the spectators and she was awarded a special cup for her performance.

The President Mr. Brahma, expressed great delight at what he saw and heard. He said that the attempt of the Club at reviving interest in indigenous games was a laudable one. He also pointed out that the members of the Club by lending support to national games and at the same time bestowing attention to western systems of body-building were affecting a sort of union between the East and the West in the domain of physical training. He wished the Club all success.

Flexible Pavements—II

Influences Affecting Present-Day Design

[By Bernard E. Gray, *Chief Engineer, The Asphalt Institute.*]

(*Concluded from the issue of the* 15*th February*, 1941)

ALMOST complete study of the influence of equipment was presented at the Twelfth National Asphalt Conference held in Los Angeles in February, 1939, under the general chairmanship of Mr. J. L. Harrison, of the Public Roads Administration. Even for those who have been constantly associated with the highway field, it is nothing short of amazing to look back and see how rapidly equipment has been improved and how greatly costs have been lowered, so that types which would not have been economical as recently as ten years ago are now invading the low cost field. A study of this report is recommended.

The improved design of bituminous mixing plants is especially notable, both in respect of capacity and cost of output. The average cost of bituminous concrete has been reduced over 50 per cent. since 1920 and 25 per cent. since 1930. Some plants now turn out well over 1000 tons per eight-hour day. The development of alloy steels which permit the construction of plants having little or no maintenance and the development of the oil burners for drying have radically altered the position of plant mixtures in the paving field. A new type of "shock heat" dryer is shortly to come on the market which promises to still further extend the trend toward plant mixing of aggregates formerly placed as road mixtures.

However, with all this development in better and cheaper plants, the extension of use of bituminous mixtures is so rapid that the road-mixing types continue to gain especially through the western and south-western areas where adverse weather conditions are less severe. The selection of type is being made more and more as a result of study of local behaviour rather than building a type because someone else had done so.

Probably in no aspect of equipment change has there been a greater improvement than in producing the final surface. One of the difficulties of flexible type construction ten or fifteen years ago was in obtaining a smooth riding surface. Old specifications are clearly evident of this fact, wherein tolerances were permitted of from ¼ in. to ½ in. variation in 10 ft. The mechanical spreaders and more recently the combination mechanical spreaders and tampers have revolutionised this end of the work, and there is no reason to-day why tolerances for pavement smoothness should not be as close for flexible types of construction as for any other type. Plant mixes can be laid easily to a tolerance of ⅛ in. in 10 ft. and many surfaces are being

NEW!

SHAW WALLACE & CO., CALCUTTA

constructed under even stricter control. No plant-mix work now should be permitted (except in certain city work or small jobs) other than with mechanical means of spreading.

Influence Of Aggregate Availability

Flexible types are different from all others in that there are a number of surfaces from which selection may be made. However, in such choice, attention should be given to the availability of local aggregates, and the limitation of the manipulative process. These factors often are overlooked.

By local aggregates is meant not wayside products, but the materials which are the output of commercial pits and quarries. Stone and gravel vary in different sections of the country in respect of the sizes obtained from the most economical methods of reduction. Cognisance should be taken of this fact, and specifications should be written to best use the complete output of plant. Such procedure is immediately reflected in cost. As an example, in Oregon, where rock is plentiful, stone bases are the natural order. In Massachusetts, where hard rock is found, the penetration type of construction is the natural procedure. In the south, the limerock and other indigenous aggregates are clearly indicated. Where finely textured surfaces are required the employment of the penetration type as base with a thin plant-mix top is an economical procedure and employs the full quarry output. The point to be emphasised is that design should take into account the commercial side of the picture, and that the closest co-operation should prevail between the commercial producer and the public engineer to work out the most satisfactory combinations.

Consideration Of Thickness

Closely tied in with the economical use of aggregates are the thicknesses of base and surface courses to be employed and which are often governed by the character of manipulative processes. Thus in penetration macadam 2½ in. and 3 in. depth is best because stone can be prepared efficiently in these sizes and bituminous cement can be forced into the voids in a satisfactory manner. Bituminous concrete can be consolidated in layers up to 4 in. for coarse mixes, and to better advantage in 2 in. to 3 in. layers for finer mixtures. Road mixes can be thoroughly mixed, spread, and rolled in depths up to 3 in. while surface treatments can be handled best in depth less than 1 in.

Base thickness is being more and more determined by balancing cost of increased depth against cost of raising subgrade support. Usually the base thickness will be determined by the maximum amount capable of being constructed in one layer as it is usually cheaper to increase subgrade support than to build two or more layers of base. For example, 4½ in. waterbound macadam base is an economical depth to construct in one layer, and for this type such thickness is usually sufficient. It is deep enough to use commercially available stone to advantage, and to be closely keyed together so that no weak areas develop.

Conclusions

(1) The most important development in design of "flexible pavements" is the increasing attention to subgrade, *viz.*, the actual design of the subgrade as a part of the pavement structure having definite minimum support values.

(2) The development of the balloon tyre has so reduced load concentrations that even though traffic volumes have greatly increased the damaging effects of impact formerly experienced have practically disappeared.

(3) The development of power equipment with attendant low cost of operation has greatly extended radius of economical haul of selected aggregates and their manipulation. Surface types formerly in the high-cost class are now competing in the low-cost field, while the quality of all types is markedly improved.

(4) In design of mixtures more attention is given to some form of stability measurement. The trend toward coarser type plant mixtures is to be noted, and that such mixtures are less critical to design in respect of stability due to the structural strength of the aggregate itself. This trend evidences itself in use of coarse base and binder courses, with thin dense mix tops to provide waterproofing.

(5) There is need for some simple field method of determination of subgrade support values, and correlation with a laboratory test.

(6) There is need for complete study of stress distribution in all types of flexible surfaces as related to density and stability of mixtures.

CALCUTTA NEWS & VIEWS A Digest

MR. ARTHUR MOORE

Mr. Arthur Moore, Editor of the *Statesman*, has left India for England.

BENGAL'S GIFT TO LORD MAYOR'S FUND

On receipt of a donation of Rs. 1,414-6-0 from the Bengal War Purposes Fund the Lord Mayor of London has sent the following telegram:—"Greatly appreciate further donation to my Air Raid Fund. Sustained support of the people of Bengal is a source of great encouragement to all here."

ALL-NIGHT BLACK-OUT IN CALCUTTA

Calcutta and the surrounding industrial areas are to be blacked-out for the entire night on March 8.

The black-out, the third and longest to be staged so far, is being held to test the lighting restriction arrangements made by the A. R. P. authorities, as also the citizens' ability to adapt themselves to conditions caused by this prolonged absence of light in an emergency.

GEOGRAPHICAL EXHIBITION AT CALCUTTA UNIVERSITY

Interesting maps, charts and pictures, including rare ones were the features of the Geographical Exhibition which was opened at the Darbhanga Hall, Calcutta University, on the 18th February. The Exhibition which was held under the auspices of the Geographical Society was opened by Dr. Syamaprasad Mookherjee, who in doing so laid stress on the importance of the study of Geography. The function took place in the distinguished presence of the teaching staff of the University and persons interested in the study of Geography, which included the Director-General of Geological Survey, Dr. C. S. Fox.

Dr. Mookherjee in opening the exhibition recalled that the study of Geography which was somewhat neglected in this University during the last 30 years had been recently properly revived. It had not only found a place in the syllabus of the Matriculation examination but emphasis had been given on the study of the subject in the higher examinations including B.A. Recently a proposal had been mooted for its inclusion in the M. A. course also. They had already made elaborate provision for it in the Teachers' Training Department.

SEALDAH STATION IMPROVEMENT

Large scale improvement works to modernize Sealdah Railway (Main) Station are now in progress. The scheme, which involves an estimated cost of Rs. 1,50,000, when completed, will increase the circulating area of the Station by almost twice its present size. To achieve this, the two front porticoes where passengers used to alight, have been demolished. This will make it easier for passengers to go from the booking office to the luggage office, and next to the platforms, and generally reduce the crowding in the waiting-hall. Approach roads to the station are also to be improved.

The whole scheme is intended to make the flow of vehicular traffic easier when entering and leaving the Station.

The new arrangement, among other things, will enable cars and taxi cabs approaching the Station, from the north of Harrison Road, to enter without having to cross the junction of Harrison Road and Circular Road. It is proposed to bring all the offices which have to deal with the public as close as possible to the circulating area to enable passengers to have easy access to them.

Mr. L. P. Misra, General Manager, E. B. Railway, is taking a keen interest in the work and, it is considered, that as a result of the improvement it will be a commodious terminus station of an important railway system, worthy of the city of Calcutta.

PROTEST AGAINST MUNICIPAL BILL

The need for vigorous agitation unitedly both by the Hindus and Muslims against the Calcutta Municipal Act of 1939, and the Calcutta Municipal (Second Amendment) Bill now before the Assembly was emphasised by different speakers at a public meeting of Hindus and Mussalmans at Shraddhananda Park on Sunday, Mr. Md. Mujaffar Hossain Khan presided. The meeting was organised by the All-Bengal Krishak Praja Samity.

Sir P. C. Ray sent a message to the meeting, in course of which he said that the conception of an autonomous civic body was one of the few things which any civilized nation could be well proud of. Sir Surendranath Banerjea gave to the Indians and particularly to the Bengalees such an institution in the shape of Calcutta Corporation and Deshabandhu gave a lead to the newly founded body towards the achievement of the ideal which assisted in ameliorating thousand and one grievances of the poor and the destitute. Now that they were going to be deprived of the little power they enjoyed, it was the duty of every citizen to oppose such attempts to their utmost.

Mr. Syed Habibur Rahaman, President, All-Bengal Krishak Praja Samity, said that the Bengal Ministry had been out to transfer the rights of Self-Government from the popular hands of Bengalees to the official control of the Government. They had deprived the Bengalee Muslims of their just civic rights in their own metropolis of Calcutta. In the last general election of Corporation 16 non-Bengalee Muslims and 5 Bengalee Muslims were elected by separate electorate system out of 21 elected seats in the Corporation. Since March last all the posts of Corporation on the basis of 25 p.c. had gone to non-Bengalee Muslims. The speaker appealed to both Hindus and Mussalmans to unite as one man and work like brothers. It was high time for Mr. Huq to form a nationalist Ministry in Bengal, and to make the province free of communal ill-feeling

between Hindus and Muslims and restore communal peace and good will.

Mr. Bipin Behary Ganguly (Councillor) said that Bengalees had proved in the past what they could do if they worked unitedly. The time had once again come when they should display such strength and capacity. They should form organisation in every Ward through which they must carry on strong agitation against the Municipal Bill.

Mr. Debendra Nath Mukherji (Councillor) said that what was needed was unity and organisation. Divide and Rule was always the policy of British Imperialism. This purpose, he said, was being served through the Muslim League.

EYE-SPECIALIST DEAD

The death occurred of Dr. Sushil Kumar Mukherjee, the well-known eye physician and surgeon of Calcutta, from heart-failure on the 18th February, at his village residence at Telinipara in Hooghly.

Dr. Mukherjee officiated as Professor of Ophthalmic Surgery in the Calcutta Medical College on several occasions. He tendered his resignation of his appointment as the Honorary Ophthalmic Surgeon of Medical College Hospital, which post he served for 11 years, in March, 1939, as a protest against the action of the Bengal Government in superseding his claims to officiate as the Professor of Ophthalmic Surgery of the College. He was a D.O. (Oxon), D.O.M.S. (Lond), F.R.C.S. (Edin), and F.S.M.F. (Bengal).

Dr. Mukherjee was Professor of Opthalmic Surgery in Carmichael Medical College. He was a member of the Senate and Syndicate of the Calcutta University and was an Examiner in Final M. B. Examination and of State Medical Faculty of Bengal. He was one of the founders and Joint Secretary of the Society for the Prevention of Blindness, Bengal.

He represented the Government of India at the 15th International Ophthalmological Congress, held at Cairo in December, 1937. He made an extensive tour of Europe and visited well-known eye-hospitals at Zarich, Vienna and Utretcht.

THE CENSUS BEGINS

The census operations which commenced in Calcutta on Wednesday will end on March, 4, 1941. Government, Semi-Government and other offices have supplied about 5000 honorary enumerators, while through public bodies the service of another 1000 enumerators has been secured.

Enumeration will be spread over a period of about 15 days. There will be two rounds of enumeration. The central date is March, 1. The first round commenced on Wednesday and will continue till March, 1. The enumerator is required to visit every house in his block by the evening of March 1, and with this, the preliminary round ends. The enumerator will preferably go on his rounds in day-light hours.

On the morning of March 2, the enumerator will start on his revisional round, *i.e.*, counting for the second time and he must conclude this final round by the evening of March 4. He is required to visit every house when he will enquire if a birth has occurred since his first visit, and before sunrise of March 1. In case of birth he will at once enumerate the child if it is living. He will next ask if any person enumerated has died before sunrise of March 1. If there has been such a death, he will cancel the slip of the deceased person without destroying it. In case of new arrivals not enumerated before, he will enumerate him.

For the purpose of census enumeration in the city of Calcutta the 32 Wards of the city have been made into 32 census "charges" with selected Ward Councillors as Charge Superintendents. Each "charge" has been divided into a number of "circles" with a supervisor in charge of each "circle" which in its turn has been split into a number of enumeration "blocks" on a population basis, an enumerator being in charge of each "block".

When an enumerator visits a house, he will record answers of 22 questions prepared by the Census Department.

Mr. R. N. Bose, Special Census Officer, Calcutta, in course of circular states :—

"An enumerator is an honorary census worker and has every right to expect that he will be treated with consideration. To send him away rudely or lightly is to court prosecution under the Census Act, and to ask him to visit the same house again and again is to refuse co-operation with a public servant in the discharge of his duties. He will have to ask some delicate questions and these have got to be answered, though in case of Purdah and incapacity, the questions may be answered by somebody who can speak on behalf of the person enumerated.

MADAME SOPHIA WADIA IN CALCUTTA

Madame Sophia Wadia, Editor, *Indian P. E. N.* and *Aryan Path* arrived in Calcutta on Wednesday morning.

Madame Wadia is the author of "Brotherhood of Religion" and stands for all that is noble in East and West alike—from the ancient times to modern days. She is the founder of the P. E. N.

(Continued on page 482)

THE CENSUS

Rumours Allayed

The Superintendent, Census Operations, Bengal, has issued the following statement :—

"It appears that the circulation of unfounded rumours has aroused mistaken fears regarding the record of religions at the forthcoming census. In particular, an apprehension has been widely expressed lest, among tribal communities, the number of those who profess Hinduism may be obscured by recording all tribes as professing either a tribal religion, or Christianity or Islam.

"It is desirable to allay all anxiety on this score. In question 4 of the enumerator's slip will be recorded the personal religion of the individual enumerated. The enumerator is bound to record the religion stated by the person he enumerates. If that person states that he is a Hindu, he will be recorded as professing Hinduism, no matter whether he is a member of a tribe or of any other community. If he is unable to state what his religion is, the enumerator will question him further in order to discover the true facts. In no case will the enumerator refuse to record the religion actually named by the person enumerated."

CIVIC NEWS FROM FAR & NEAR

MADRAS CORPORATION RESIGNATIONS

Another Congress Councillor of the Madras Corporation Mr. M. Radhakrishna Pillai, has submitted his resignation to the Mayor. This brings the total number of members resigned to 18.

CHECK ADULTERATION

To prevent the adulteration of *ghee*, milk and butter, an All-India Conference is to be held at Delhi on February, 21 and 22. Leading representatives from all parts of the country are expected to attend the Conference.

GANDHIJI'S PORTRAIT

The Standing Committee (Education) of the Madras City Council have decided to recommend to the City Council that the portrait of Gandhiji in Corporation Muslim Schools should be removed in view of objections received from Muslims.

BLACK-OUT AT PESHAWAR

Peshawar's black-out arrangements were put to a test recently for two hours. While street lights were put out, all domestic lights had to be obscured.

With the sounding of the "all-clear" signal the city burst into light again.

PESHAWAR MUNICIPALITY

The life of the Municipal Committee, Peshawar, has been extended for a further period of one year with effect from 12th February, 1941, or until the next general election, whichever is earlier, according to a *Gazette* Notification.

The election of Khan Ali Gul Khan, President of the Peshawar Municipality has been gazetted.

Khan Ali Gul Khan is also President of the Provincial Satyagraha Committee.

D. I. KHAN MUNICIPAL COMMITTEE

The Governor of the North-West Frointer Province has extended the life of the Municipal Committee, Dera Ismail Khan, for a further period of one year with effect from February 28, 1941, or until the next general election, whichever is earlier.

Rai Bahadur Jetha Nand has been elected President of the Municipal Committee, Dera Ismail Khan, according to a *Gazette* notification by the N.-W. F. P. Government.

RANGOON EDUCATION BOARD

Daw Mya Sein, M.A., B.LITT, the first Burmese woman to elected to the Corporation Council, has been elected as the Chairman of the Rangoon Education Board of the Corporation. U Ba Hlaing, M.H.R., was another candidate for the same post and there was tie in the voting, but the Chairman Dr. Alam Murray, gave his casting vote in favour of Daw Mya Sein. The Education Board will not only have a Burmese woman at head but also another Burmese woman in the same office, as the Rangoon Corporation recently appointed a Burmese woman as the Assistant Education Officer specially to look after the increasing number of girls' schools in the city.

CONGRESSMEN IN BIHAR LOCAL BODIES

The Working Committee of the Bihar Provincial Congress Committee decided last week-end that members of local bodies who desire to offer *satyagraha* and were ready to fulfil the conditions laid down by Mr. Gandhi should be permitted to do so.

The above decision will be operative in the case of all district boards in Bihar except the Santhal Parganas.

The position of the local bodies in which the Congress party is in a majority and hold executive offices was also considered, and the Committee came to the decision that it is not proper to prevent any member of any such body from offering *satyagraha*.

KARACHI CORPORATION WALK-OUT

The Moslem members of the Karachi Municipal Corporation, walked out as a protest against the Mayor's ruling that no amendment could be made to the provision for salaries scheduled for the staff when the Corporation was considering the budget for 1941-42.

As details of general administration were being considered, Mr. M. Gazdar proposed that a provision of Rs. 7,200 instead of the original Rs. 4,800, be made for the pay of the land department officer.

The Mayor, giving his ruling, said that the Chief Executive Officer could approach for an increase in the salary of scheduled staff when found necessary. On this the Moslem members, headed by Mr. Gazdar, walked out. The meeting was, however, continued and the original estimates were adopted.

Club in India and represented India at the world conferences held at Beunos Aires, Holland and Paris.

Recently at the invitation of the Mysore University she delivered a course of lectures on the subject of *Preparation for Citizenship*.

Madame Sophis Wadia, left for Santiniketan on Thursday morning on a short visit and returned to Calcutta on Friday.

LECTURES AT ROYAL ASIATIC SOCIETY

"Is religion a spent force?" This will form the subject of a lecture to be delivered by Sir S. Radhakrishnan at the Royal Asiatic Society of Bengal on March 14.

The lecture is one of the lectures organized by the Society in order to convey instructive and interesting information in attractive form to an audience not necessarily composed of specialists.

The other lectures will be delivered by Mr. Percy Brown on "The Arts of Nepal" on February 26, by Dr. J. B. Grant, Director of the All-India Institute of Hygiene and Public Health, on "Rural reconstruction in China" on March 7, by Dr. S. L. Hora on the "Life, history and wanderings of *hilsa* in Bengal waters," on March 25, and by Lt.-Col. S. D. S. Greval of the School of Tropical Medicine, on "Blood groups and types."

LEGAL INTELLIGENCE

CORPORATION ASSESSMENT

(Before Mr. Justice Lort-Williams)

Corporation Of Calcutta

vs.

Samarendrajit Shaw And Others

A question of importance raised in this case was whether the plaintiff, the Corporation of Calcutta, had a duty to assess separately outhouses or portions of a building from the main building and to treat same as separate municipal holdings under Section 135 of the Calcutta Municiptl Act.

Mr. S. P. Chowdhury appeared for the Corporation; Mr P. C. Mullick for the defendant Samarendrajit Shaw; Mr. S. N. Roy Chowdhury for the defendant Birendrajit and Mr. A. C. Mitra for the defendant Ranjit Shaw.

The Corporation claimed Rs. 1,556-12-6 against the three defendants on account of arrears of consolidated rates in respect of 83, Dharmatala Street, Calcutta for the 4th quarter, 1930-31, to the 4th quarter 1937-38, and the declaration of the statutory charge on the premises. The defendants contended *inter alia* that the premises consisted of two shops on the road side and a main building. At all material times the main building remained vacant and unoccupied while the shops were occupied for certain periods. They contended that the shops should have been separately assessed as distinguished from the main building and if this was done the claim of the Corporation would have been considerably less as the main building had remained vacant and they would have been entitled to substantial vacancy remission.

The Corporation relied on Section 135 and its case was that the matter was discretionary. The Executive Officer of the Corporation had not exercised his discretion to make a separate assessment. The Corporation asked the defendants to pay up the arrears after which the question would be dealt with but the defendants did not pay.

Delivering judgement, his lordship held that in this case the defendants applied for a separate assessment in December, 1931, but until July, 1936. the Corporation did nothing The Corporation had a duty to perform under Section 135 when the request was made by the defendants. On receipt of such a request it was the duty of the Executive Officer under the above Section to decide whether in his descretion. the building should be separately assessed. It appeared that the Corporetion and its Executive Officer had failed to fulfil their duty under that Section. It was not until July, 1936, that the matter was at all considered and then, presumably, the Executive Officer exercised his discretion by refusing to assess separately. The result was that owing to this protracted delay on the part of the Corporation the defendants were being made liable for the taxes at the full rate. His lordship referred to the judgment which he delivered on May 27, last in the case of the Corporation of Calcutta *vs.* Nanda Lal Chowdhury (Suit No. 548 of 1937) and, in the circumstances granted a decree in favour of the Corporation as prayed but refused to allow any costs to the Corporation.

Attorneys :—Mr. T. C. Mitra; Mr. A N Das; Mr. H. C. Mullick and Mr. M. M. Sen.

GOVERNMENT HOUSE ASSESSMENT

The suit instituted in the Small Causes Court, Calcutta, by the Province of Bengal—the official designation of the Governor of Bengal in legal documents—objecting to the assessment of the premises, which constitute "Government House, Calcutta" by the Calcutta Corporation has been amicably settled between the parties concerned.

The terms of the settlement are that the assessment of Government House will be reduced from Rs. 6,93,526 to Rs. 4,72,776 which will continue for the next six years; Government will not ask for any vacancy remission during this period of six years and proportionate remission will be allowed if the Howrah Bridge Tax is withdrawn within this period.

CASE AGAINST BATA

Before Mr. Justice Henderson, this was an application by the petitioner, Bata Shoe Company Limited, against its conviction under Section 492/175 of the Calcutta Municipal Act, and sentence of a fine of Rs. 50 thereunder by the Muncipal Magistrate of Calcutta on the complaint of the Corporation of Calcutta.

The petitioner's case was that the business of sale of its goods was carried on by its Head Office in Old Post Office Street through the petitioner's sale depots or branch shops situated in different localities in Calcutta. The petitioner had taken out a "personal" license of Rs. 250 from the opposite party on the basis of the petitioner's paid-up capital of Rs. 10 lakhs but, the opposite party (Calcutta Corporation) began to insist on the petitioner's taking out further licenses, that is one separate license for each one of its different sale depots. Being pressed by the opposite party the petitioner had to take out under protest, local licenses for their different sale depots omitting to take out a local license for one of them at Dharamtolla Street on an understanding with the opposite party that the matter should be tested in a competent court of law. The opposite party thereafter filed a criminal case against the petitioner in the court of the Municipal Magistrate.

The prosecution case was that the petitioner was liable under Calcutta Municipal Act to take out different "local" licenses over and above the "personal" license while the petitioner contended that no such "local" licenses were necessary inasmuch as the sale depots were not places where any separate or independent business was carried on but were places through which the business covered by the "personal" license was carried on. The Magistrate, however, found the petitioner guilty of the offence of carrying on business of retail shopkeeper at Dharamtala Street without a local license for the year 1939, and sentenced it as stated.

His lordship issued a rule on the Crown and the Corporation and directed that the matter be heard by a Division Bench.

Mr N. K. Basu with Mr Shyamapada Majumdar appeared for the petitioner.

THE CORPORATION "CHEATED"

Convicted on a charge of cheating the Calcutta Corporation in respect of a cheque of Rs. 25, Bhabataran Ghosh, a shop-keeper in the New Market, was sentenced to a month's rigorous imprisonment and a fine of Rs. 50 in default, another month's imprisonment by Mr N Mookherjee, Honorary Presidency Magistrate.

The accused, it was stated, gave the cheque in question to a bailiff of the Corporation in payment of his trade license fee, and obtained a receipt from him, but the cheque was dishonoured.

Out of the fine, if realised, Rs. 40 was ordered to be paid to the Corporation as compensation.

Mr. A F. M. Murshid Ali, pleader for the Corporation.

ADDITIONAL PARTIES TO SUIT

(Before Mr. Justice McNair)

Krishna Chandra Ghose
Vs.
The Corporation Of Calcutta

His lordship disposed of this application (reported in a previous issue of the *Gazette*) in which the petitioners Jogendra Lal Saha and five others asked *inter alia* for an order that leave might be given to them to be added as parties-defendants to the suit and for other reliefs

Mr. P. B. Mukherji appeared for the petitioners; Mr. S. M. Bose and Mr. S. M. Banerji for the plaintiff-respondent Krishna Chunder Ghose; the defendant, the Corporation of Calcutta did not appear.

In the suit plaintiff, Ghose, asked for a perpetual injuction against the Corporation on the above terms and for a declaration that it had no right to allow any worship or cause any obstruction for the purpose of such worship in the above public thoroughfares and for damages. The above *Sarbojanin Durga Puja* of the Janbazar locality was started in 1933. It had gradually grown and was now causing obstruction to the ingress to and agress from his premises and to the public and on one occasion there was a fire. The plaintiff further alleged that in granting permission for such *Sarbojanin Puja* in that neighbourhood the Corporation was acting wrongfully and in breach of its statutory duties to the rate-payers.

The present petitioners denied the charges made against the Corporation.

His lordship granted leave to the petitioners to be added as parties-defendants to the suit. Certain directions were given.

VITAL STATISTICS

(I)

For the City of Calcutta for the week ending
8th February, 1941.

City Of Calcutta (Town and Suburbs)

The total number of deaths registered during the week was 892 against 821 and 801 in the two preceding weeks and higher than the corresponding week of the last year by 266. The general death-rate of the week was 40·7 per mille against 34·8 the mean of the last five years.

Town (Wards 1—25 and 27)

The number of deaths registered during the week ending 8th February 1941, was 774 against 707 and 680 in the two preceding weeks. District II Eng'g. Office.
The 20th February, 1941.

Notice to Rate-payers.

The attention of the rate-payers is invited to Section 190 of the Calcutta Municipal Act which provides for additional costs to be imposed if the bills are not paid within seven days from the date of presentation. Their attention is also invited to Section 191 of the Act which provides for moveable articles to be held under distraint and sold if the bills are not paid within seven days after the service of notices of demand. They are therefore requested to pay up their dues early as under the provisions of Section 149 of the said Act the rate bills for a quarter fall due and become payable within "the 15th of the first month of the quarter, to which they relate."

Defaulting ratepayers should note that if the arrears of rates are not paid when

CORPORATION NOTICES—*Contd.*

the bills are presented for payment, "action will be taken for their recovery under the provisions of the law."

Applications for reconsideration of assessment including those now pending will not be considered unless full payment of all the arrears is made by the applicants. If not paid up, steps for the recovery of such arrears will be taken under the provisions of law as in any other case.

J. C. MUKERJEA,
Chief Executive Officer.
Central Municipal Office.
The 14th January, 1941.

Special Notice.

New Telephone Numbers

It is notified for the information of those interested that all independent telephone connections, except those of the Mayor and the Chief Executive Officer, in the Central Municipal Office including the Hogg Buildings and S. S. Hogg Market, have been brought under our private exchange renumbered as "Calcutta 6600". Henceforward, during office hours, all connections with the offices located in the above mentioned buildings, can be obtained only through this Central Exchange (*viz.*, Calcutta 6600). After office hours and on holidays, the direct connections to the principal officers will work.

M. RAY,
Asst. Secretary.
Central Municipal Office.
The 12th February, 1941.

Cancellation of Alignment

It is notified for general information that the Corporation of Calcutta under powers vested in them in this behalf have by a resolution dated the 15th January, 1941, cancelled the portion, affecting premises No. 27, Gun Foundry Road and 29, Barrackpore Trunk Road of the alignment of the projected public street varying in width from 16 ft. to 20 ft. from Gun Foundry Road to Seal's Garden Lane in Ward 32 which was originally sanctioned by the Corporation on 6th July, 1938.

A copy of the plan showing the portion cancelled may be seen in the office of the Chief Valuer and Surveyor of the Corporation any day during office hours on payment of usual fees.

J. C. MUKERJEA,
Chief Executive Officer
Central Municipal Office,
The 11th February, 1941.

S. S. Hogg Market.

BARANAGAR MUNICIPALITY

TENDER NOTICE

Sealed Tenders in the prescribed Tender form, available at the Municipal Office at (-/8/-) annas eight per copy, are invited and will be received by the Chairman up to 5 p.m. of Friday, the 28th February, 1941, for the construction of Buildings for Maternity Ward, Health Visitors' & *Dais'* quarters, as per estimate, plan and specifications of the work which may be seen at the Central Office during office hours.

THE TENDERERS SHOULD ABIDE BY THE FOLLOWING CONDITIONS:

1. Tenders should be addressed to the Chairman, superscribed "Tender for Buildings for Maternity Ward, etc."
2. Earnest money of Rs. 200 must be deposited with the Cashier of the Municipality, either in cash or in G. P. Notes endorsed in favour of the Chairman, and receipts or Cashier's certificate for such deposit must be enclosed with the tender. The earnest money shall be forfeited in the event of the tender being withdrawn after the acceptance.
3. Security Deposit equal to 10 per cent. of the total value of the work undertaken must be furnished either in cash or in G. P. Notes within one week from the date of acceptance of tender.
4. The successful tenderer shall have to execute an agreement within one week from the date of acceptance of the tender—the form of which agreement may be seen at the Municipal Office—failing which necessary steps will be taken.
5. The tender should remain open for acceptance for a fortnight from the last date of submission thereof.
6. The Commissioners do not bind themselves to accept lowest or any tender.

By order,
LALIT MOHON BANERJI,
Secretary.

Baranagar Municipal Office,
The 17th February, 1941.

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—
10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.
Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

A. QASIM,
Acting Supdt., S. S. Hogg Market.

Corporation Chief Executive Officer

Mr. J. C. Mukerjea Re-appointed For Two Years

THE Corporation of Calcutta, at a Special Meeting on Friday, the 28th February, re-appointed Mr. J. C. Mukerjea as Chief Executive Officer for a further period of two years on his present pay and emoluments and on the existing terms and conditions of service.

The appointment is to take effect from March 31, 1941, the date of the expiry of his present term of office.

The appointment was without any opposition.

The Services Standing Committte's (No. I) recommendation for the appointment of Dr. B. N. Dey, Chief Engineer, as Chief Chief Executive Officer was moved by Mr. M. A. H. Ispahani, Chairman of the Committee, "as a matter of formality".

Mr. Krishna Chandra Ghose moved an amendment that Mr. J. C. Mukerjea be re-appointed Chief Executive Officer for a period of three years from April 1, 1941, on Rs. 2,000 in the grade of 2,000—100—2,500.

Mr. B. N. Roy Chowdhury moved an amendment that Mr. Mukerjea be re-appointed for one year on Rs. 1,500 in the grade of Rs. 1,500—100—2,000.

Mr. Hamoodur Rahman moved another amendment that the Corporation should approach the Government and ask them to lend the services of a senior member of the Indian Civil Service not below the rank of a Magistrate and Collector for the purpose.

The Mayor, (Mr. A. R. Siddiqi) ruled Mr. Rahman's amendment out of order on the ground that under the rules the House could only consider the names of those candidates whose cases were considered by the Services Committee.

Mr. N. C. Chatterjee moved still another amendment proposing the re-appointment of Mr. Mukerjea for three years on his present pay Rs. 2,900 and on the existing terms and conditions of service.

Mr. Susil Chandra Sen moved that Mr. Mukerjea be re-appointed for a term of two years with effect from the date of expiry of the present terms of his office on his present pay and emolument and on the existing terms and conditions of service.

Mr. Sen's amendment was carried without opposition.

Chronicle & Comment

OUR "CHIEF"

The re-appointment of Mr. J. C. Mukerjea as Chief Executive Officer of the Corporation for a further term of two years will cause wide satisfaction in Calcutta, for he has endeared himself to all classes of people in the city. He holds a unique position in our civic life, a position which he has maintained, through good report and evil report, and from which no attempt, however powerful, has been able to dislodge him. We offer our "Chief" our sincerest congratulations.

Speaking as an officer of the Corporation of Calcutta, we repeat once again what we had said on previous occasions—that no decision other than what had been arrived at by the Corporation would have given greater satisfaction to the rank and file of Corporation employees—from heads of departments downwards. To them it has always been a pleasure and privilege to work with and under their "Chief": and their loyal co-operation, we should like to take this opportunity of assuring Mr. Mukerjea, he will continue to receive in as full a measure as it is his due.

Census Through The Ages

Census is as old as civilization itself.

In Babylon before 2,000 B. C. regular enumerations were made. The enumerations covered not only the population but agriculture, produce and livestock also. Other ancient countries which had regular censuses were: Persia, China and Egypt.

In Persia the enumerators was to fix the tribute due from each province, in China for taxation and military liability; in Egypt to discover the occupation of each individual which would "aid the official supervision of morals and discourage disreputable means of subsistence."

The Bible also mentions many instances of census-taking. The two most important of them are: the determination of the fighting strength of the Israelities at the time of the Exodus by regular recorded enumeration; and the census by Joab under orders from David was also undertaken with a view to gauge the fighting strength of the clans.

In ancient Rome, census, as a regular official institution, was first adopted by Servus Tullius. He made a law that once in five years the population of Italy should be counted along with the property of each individual. That was in 578 B. C. Emperor Augustus extended the census to the whole of the vast Roman Empire. He made his decree in the 5th Century B. C. The Gospel of St. Luke mentions this first Imperial Census and says, "Augutus ordered the whole world to be enrolled."

In ancient India, about 300 B. C., there was a perfect system of census working. It was during Chandra Gupta's time. Each enumerator noted down throughout the Maurya Empire the caste, *gotra* (subdivision of caste), the name and occupation of both men and their income and expenditure.

The Domesday Book of William the Conqueror was the direct result of a Census,—the first of its kind in old England. It was made in 1086 by his officials and records information about people and their possessions in the part of England conquered by him.

The first modern census was enumerated in 1665 in the French Colony of New France (part of present Canada). The authorities of the colony made regular enumeration of families and individuals.

When, in 1753, a Bill was introduced for an annual enumeration of the population of Great Britain the whole country rose against the idea. It was opposed as 'subversive of the last remains of English liberty' and some prophesied that it would cause 'some public misfortune of an epidemical distemper'. Though passed in the House of Commons, the Bill was rejected in the House of Lords.

It was only in 1800 that a Census Bill was brought before Parliament and became law. The first English census was taken during March of the following year. It recorded 'persons, houses and families.'

The census was extended to the whole of the British Empire during 1871, when the first general non-synchronous census of India was taken. The first Indian general synchronous overnight census was not taken however till 1881. It covered the whole of India excepting Nepal and Kashmir. Even before 1881, as early as 1853, there were censuses in India. They were conducted by Provincial Governments.

Since 1881, a census has been taken in India every ten years—in 1891, 1911, 1921 and 1931. This is the sixth decennial census we are now going through.

Our readers interested in previous censuses so far as Calcutta is concerned, are referred to the excellent comprehensive article on the subject in our last Anniversary Number by Mr. J. M. Dutta.

MR. J. C. MUKERJEA

Career In The Corporation

Secretary to the Corporation—1919 to 1922.
Vice-Chairman—1922 to 1924.
First Deputy Executive Officer—1st April, 1924, to 12th December, 1924.
Acting Chief Executive Officer—12th December, 1924 to 16th May, 1927.
Chief Executive Officer:—
First appointment—17th May, 1927.
Second appointment—26th March, 1930.
Third appointment—18th September, 1933.
Fourth appointment—30th March, 1938.
Fifth appointment—28th February, 1941.

MR. J. R. COATS DEAD

Former Chief Engineer Of The Corporation

We deeply regret to record the death of Mr. J. R. Coats, late Chief Engineer to the Corporation of Calcutta. He retired from the service of the Corporation in 1932.

Born at Glasgow on the 2nd June, 1883, he graduated in Engineering from the University of Glasgow and became a full member of the Institution of Civil and Mechanical Engineers.

After graduation he served as an apprentice and received training as a Civil Engineer under Mr. A. B. Macdonald, M.I.C.E., City Engineer, Glasgow. After completion of his apprenticeship period, he was appointed as an Assistant Engineer in connection with the design and construction of the Glasgow Main Drainage Works, the total cost of which was estimated to be £2,250,000. He completed his job with credit.

THE LATE MR. J. R. COATS
Chief Engineer, Calcutta Corporation : 1922—1932

In 1909 he served as Assistant to Mr. G. A. Hart, M.I.C.E., Sewage Engineer to the Corporation of Leeds. In this capacity he was entrusted with the work of design, construction and maintenance of the Drainage and Water Works Schemes of Leeds, which cost the city a sum amounting to £1,270,000. This work was also successfully completed by Mr. Coats.

In 1911 he came out to India and was appointed as Assistant to Mr. J. W. Madeley, M.A., M.I.C.E., Special Drainage and Water Works Engineer to the Corporation of Madras. He was engaged in the work of design and construction of a comprehensive scheme of Main Drainage for the city of Madras, the total estimated cost of which was Rs. 100,00,000 (one crore). As in the previous cases he went through the job with credit and success.

In 1913 he became the Municipal Engineer to the Corporation of Madras, and served in that capacity for about six years.

On the 26th February, 1919 Mr. Coats was appointed as Executive Engineer, Drainage, Corporation of Calcutta, in place of Mr. Ball Hill. This post he occupied till the 31st March, 1920.

As a recognition of his merit and ability he was appointed Officiating Chief Engineer on the 1st April, 1920, being made permanent incumbent of the post, two years later, on the 27th March, 1922. This post he held upto the 31st March, 1932, when he retired.

The most noteworthy engineering work completed by him while he was Chief Engineer, was the Moore Water Works Extension Scheme, which cost the city the sum of Rs. 2½ crores.

The Late Mr. Coats

Mr. J. R. Coats, whose death it is our mournful duty to announce this week, made his reputation as one of the most distinguished Chief Engineers of the Calcutta Corporation. He was responsible for the execution of the Moore Scheme which has given Calcutta more water to use and waste. Mr. Coats will be long remembered by his colleagues in the Corporation. He had a vivid personality and he was a good friend.

The Late Raja Janaki Nath Roy

Calcutta has lost a distinguished citizen and the Province an eminent banker and industrialist in the death of Raja Janaki Nath Roy of Bhagyakul. He was 93 at the time of his death, a remarkable age when we consider that he joined his father's banking business in Calcutta at the tender age of 13 and lived a most strenuous life till almost his eightieth year. Possessed with a keen business instinct the Raja together with his brothers—the late Raja Sreenath Roy and the late Rai Bahadur Sitanath Roy—was instrumental in the establishment of various industrial and commercial concerns in the province. He was one of the founders of the Bengal National Chamber of Commerce and also started a jute mill, the only mill of the kind, owned and managed by Bengalis.

Janakinath was for sometime a Commissioner of the old Corporation of Calcutta and was connected with various public bodies.

We offer our condolences to the bereaved family.

Councillor Sudhir Ch. Ray Chaudhuri

We are much concerned to learn that Councillor Sudhir Chandra Ray Chaudhuri was involved in a motor accident on Thursday last. While proceeding in a car through Chittaranjan Avenue a motor bus collided against it, resulting in injuries, which necessitated his removal to the Charmichael Medical College Hospital. Later he was taken to his house where he is now in bed. We wish him a speedy recovery.

Housing Cawnpore Labourers

Cawnpore has, during the last twenty-five years, greatly developed as an industrial and trading centre. It has a population of about three lakhs, and at least half of it consists of the labour

class. The question of properly housing the latter and of providing them with the modern amenities of life is one of the pressing problems before the Cawnpore Municipality and the Cawnpore Improvement Trust. The houses in which a majority of mill workers at Cawnpore live were condemned as unfit for human habitation by the Royal Commission of Labour fifteen years ago and by the Cawnpore Labour Committee three years ago. The continued labour unrest at Cawnpore is partly attributed to the housing conditions of workers in the city. The Cawnpore Improvement Trust had been asked to make a small start by providing 225 workers' quarters but last year the Provincial Government cancelled the scheme on the ground that a fuller scheme was being drawn up.

Replying to the civic address recently presented to him by the Cawnpore Municipal Board, Sir Henry Horsman, a mill magnate and leading employer of Cawnpore, stressing the urgency of settling mill workers in "that environment which will yield them the greatest happiness and contentedness, and make their daily life fuller and brighter for their families and for themselves, whilst holding out security and hope for their future", said that in the successful solution of this problem "lies not only the future welfare of our workers but the very existence of that edifice which has been built up diligently and indefatigably during the past half century." Sir Henry added that the task was "not the exculsive obligation of the employer, but was a charge and a responsibility to be shared with the Cawnpore Municipal Board and the Cawnpore Improvement Trust."

It should be mentioned in this connection that Sir Henry himself made, some time ago, to the Cawnpore Municipality the generous offer of building quarters for 5,000 workmen if the Municipality could provide sewage and water supply (*Cawnpore Labour Enquiry Committee Report*, Para 218.) Nothing, however, it appears, has been done so far in this direction. The Cawnpore Municipality, it is strange, should fail to take advantage of the open offer of a distinguished citizen whose public spirit and philanthrophy has given their city the Ursula Horsman Memorial Hospital built in the beloved memory of his brother's wife and the Alice Horsman Memorial Hospital built in the sacred memory of Sir Henry's mother, furnished with up-to-date equipments and standing as an eloquent testimony to this noble Englishman's deep sympathy for the poor and the needy among Indians.

It is, however, gratifying to note that the Cawnpore Municipal Board have already provided quarters for 1,500 of their labour employees and the U. P. Government have just sanctioned a loan of Rs. 50,000 for the construction of more quarters. The work will be taken in hand shortly.

On Nursing

Lady Linlithgow's observations regarding the difficulties in the way of recruiting competent Indian nurses, have attracted general attention.

The *Guardian* of Madras, an Indian Christian Weekly, points out that Government is chiefly to blame for the present situation. It suggests that the nursing profession was more attractive than it is at present but that it has suffered in popularity owing to the measures of Government effecting the pay and conditions of service of Indian nurses.

The *Guardian* writes :—

> That nurses do not get fair treatment is a cry heard as much in the West as in India, though undoubtedly conditions are infinitely better where the profession is well-organised and established. This is one reason why women in India did not readily take to this work. It still remains the main reason. Her Excellency the Marchioness of Linlithgow, however, stressed, in opening the Conference of Trained Nurses Association, the reason that "responsible men among the Indian public look upon nurses as a necessary evil to be tolerated, but who must be made to feel that they are entirely subordinate to men." When the higher cadre was thrown open to Indian women, candidates were not lacking. The system had excluded them in the belief that they were averse to work among all and sundry in a public hospital. Till then only menial service was open which section is not honoured by anyone, let alone Indian men and women. With honourable conditions guaranteeing them protection and self-respect, the way was made easy and the response was adequate. But the reaction on the part of the Government is the usual one. The popularity of the profession is made the excuse for depressing conditions, for the abundance of supply instead of being a means to extend the nursing profession introduces the market rule of bargaining for cheap labour. It is no longer popular prejudice—men's or women's—that rules recruitment, but the perpetual threat of retrenchment that is discouraging women.

"Zoolum"

Under the above intriguing caption, *Municipal Engineering and Sanitary Record* of London writes in its issue of November 21, 1940, which was received last week in Calcutta :—

> The strike of scavengers and other labour staff of the Calcutta Corporation has now terminated, the unanimous decision of the strikers to resume work unconditionally having been announced. Speakers for the Corporation congratulated them in deciding to resume work without any stipulations or reserve, and the Mayor assured them of the sympathy of the Corporation. In consequence, officials of the Corporation were asked by the Chief Engineer to take back those strikers who presented themselves for work at once; further, "to behave with them sympathetically." He addressed his subordinates in the following words :—"You are hereby ordered that you should take back the strikers who presented themselves for work this morning. They should be given to understand that they could be taken as new recruits on trial of good behaviour and on pay to be fixed by the Chief Executive Officer, and would have to work in any beat in the Ward or in any other Ward or even in other districts if required." Such a rendering of the word "sympathy" is surely

the reverse of sympathetic. The returning men are to accept whatever pay may be fixed by the Chief Executive Officer, they will be reinstated only in the position of new recruits (with corresponding reduction in wages), and they are to work in any part of the city to which they may be assigned, which may in some cases mean many miles of daily travel. We have no sympathy with the average body of men who go on strike, and this is specially so in the case of those periodical lightning strikes which have so disorganised the sanitary services of Calcutta in the past. We do not say that we should, when it came to reinstatement, have acted otherwise than the Corporation has acted, but we certainly should not have disfigured any concession we might make by the use of an expression of sympathy which has no place in fact. The Chief Executive Officer says in his manifesto: "Please also instruct the Block Sarkars to be sympathetic and not to taunt any cooly or make any *zoolum* over them." With this we are in full accord, the making of *zoolum* over a fallen foe (whatever it may mean) being a highly pernicious proceeding.

Improvement Trust Budget

The Budget of the Calcutta Improvement Trust for 1941-42, which was presented by the Chairman of the Trust at its last meeting, shows an estimated opening balance of Rs. 57,57,000, as against Rs. 68,00,000 in the previous year. The capital and revenue receipts have been estimated at Rs. 54,39,000 and Rs. 47,80,000 respectively, and funds to be available for expenditure in acquisition of land and engineering charges during the coming year at Rs. 55,00,000 and Rs. 15,00,000, respectively.

Fire Fighting In Ancient Times

The first organized fire fighting of which we have a record existed in ancient Rome. This department was organized about 22 B. C. by the Emperor Caesar Augustus, and was composed of 600 slaves called Vigiles. In 6 A. D., Augustus reorganized the department so that it was then made up of 7,000 free men divided into seven sections. These were called the Matricularii and they were equipped solely with the crude hand buckets. The hand pump design was undoubtedly brought back by the army after its conquest of Greece, but the effectiveness of the force was very limited. It is known that they tried their utmost to quench the flames of a burning Rome on the day Nero chose to give his famous violin recital, although it did not receive the publicity that was given the violin concert.

The Matricularii existed until 476 A. D., when Rome fell into the hands of the northern invaders. Then fire fighting as an institution, like many other factors found in a modern city and which to a degree early Rome possessed, perished in the ensuing blackout of progress and civilization. Many stories of great holocausts are recorded in history with no mention made of any organized efforts to control them.

LATE SIR R. N. MOOKERJEE

Bust Unveiled

A bust of the late Sir Rajendra Nath Mookerjee was unveiled by the Hon'ble Maharaja Srishchandra Nandy of Cossimbazar at the Institution of Engineers (India), 8, Gokhale Road, Calcutta, on Thursday last.

Unveiling the bust, the Maharaja said that Sir Rajendra Nath Mookerjee had established for himself a position of eminence and unquestioned leadership in the Counsels of business and commerce.

Mr. N. V. Modak, President of the Institution, requesting the Maharaja to unveil the bust described the story of the foundation of the central organization for Engineers in India, and how, under the guidance of Sir Rajendra Nath Mookerjee, the institution had taken shape.

CALCUTTA MUNICIPAL (AMENDMENT) BILL, 1940

Select Committee Report

The report of the Select Committee on the Calcutta Municipal (Amendment) Bill, 1940, was presented in the Bengal Legislative Assembly on Friday, by Nawab Habibullah Bahadur of Dacca, Minister for Local Self-Government.

The Committee made certain modification particularly in respect of the provisions in the Bill relating to the appointment of the Executive and the proceedings of the Corporation and suggested the lowering of the franchise.

The Select Committee, while retaining the clause giving power to the Provincial Government to supersede a department of the Corporation, suggested the deletion of the provision vesting the Government with power to dissolve the Corporation.

As regards the appointment of the Chief Executive Officer, they have restricted the appointment to a member of the executive branch of the Indian Civil Service having at least 15 years' service to his credit.

The Committee have also limited the proposed power of the Executive Officer to sanction estimates up to Rs. 5,000 only instead of Rs. 10,000 as originally provided.

As regards franchise, the Committee suggested the lowering of the rent-qualification of people occupying huts in *bustees*. The Committee further proposed the addition of a new clause laying down the special procedure to be adopted in election petitions for further scrutiny and recount of votes.

As regards the clauses regarding building regulations, they recommended that these provisions should be omitted from this Bill and that Government should immediately take up the revision of the building rules with a view to introducing separate amending Bill dealing solely with this question.

THE WEEK IN THE CORPORATION

A SHORT RECORD OF THE MORE IMPORTANT DECISIONS OF AND DISCUSSIONS AT THE CORPORATION MEETING FOR THE WEEK ENDING FEBRUARY 28, 1941

[The reports of the meetings of the Corporation appearing below are, in most cases, a summary of the proceedings.—Ed., "C. M. G."]

THE THIRTY-THIRD ORDINARY MEETING HELD ON WEDNESDAY, THE 26TH FEBRUARY, 1941

Standing Committee Vacancies Filled Up

The vacancies in the *Works Standing Committee* and *Water Supply Standing Committee* caused by the resignation of Mr. G. S. G. Vernon were filled up by the election of Mr. W. R. Humphrey. He was also elected to the Beggar Problem Special Committee and the Special Committee to consider *de novo* all establishment cases sanctioned during 1939-40.

Election Rules

The meeting approved, on the recommendation of the Estates and General Purposes Standing Committee, the draft of rules proposed to be made by the Government under Section 80 (1) and (2) of the Calcutta Municipal Act, 1923, for the conduct of election of Councillors.

The recommendations of the Committee were as follows:—

(1) That the following be substituted for clause (b) of Rule 1:—

"That Chief Executive Officer, Corporation of Calcutta, shall be in charge of the conduct of elections and shall for the purpose of these Rules, be called "the Election Officer".

(2) That with regard to the method of voting, the Committee accept the changes suggested in Rules 7(2), 16(1), 17 and the other rules and in Form No. I and Schedule A annexed to the Rules, as in their opinion the introduction of the symbol system is an improvement on the present method of voting and will help illiterate voters in casting their votes properly without the help of the Presiding Officer.

(3) That the proposed Rule (9) be accepted provided that a saving clause be inserted to protect the Returning Officer from liability for any omission on his part in this respect.

(4) That the proposed Rules 14(4), 21(3), 28, 28(2) and 37 be accepted.

(5) That Rules 32, 34(1) and 36 as redrafted, be accepted.

(6) That in the opinion of the Committee, a new Rule (on the lines of old Rule 25) be inserted requiring the Presiding Officer to read out to those present the provisions of Section 14 of the Indian Election Offences and Inquiries Act, 1920, and that a similar provision as contained in old Rule 40 be retained in Rule 42.

(7) That the Committee do not accept the suggestion contained in Sub-rule (2) of Rule 43, which provides that "in a constituency in which a seat is reserved for members of the Scheduled Castes, the ballot paper shall also be rejected if the number of votes recorded thereon in favour of candidates not belonging to the Scheduled Castes exceeds the number of seats in that constituency not reserved for members of those castes." This rule seeks to impose a greater restriction on the method of voting than is warranted by the statute itself. It also appears that prior to the amendment of the Act, there had been a similar reservation of seats in favour of the Mahomedans but there was no such restriction provided in the Rules.

The draft rules were published in the *Calcutta Gazette* and had been forwarded by the Government to the Corporation for their opinion.

Mr. M. A. H. Ispahani, in opposing the recommendation of the Committee that "the Chief Executive Officer of the Corporation shall be in charge of the conduct of elections," said that somebody other than the Chief Executive Officer and one not connected with the Corporation, one who could give a fair deal to all, would be the fit person to occupy such a responsible position as to run the election of Councillors. The Government after serious consideration had drafted these Rules. It would be wise to abide by their decision, for every one with experience of Corporation election knew it to his cost the existing difficulties.

Mr. F. G. Watson, who also opposed the recommendation of the Committee said that the Election Officer should be entirely divorced from Corporation politics. For this purpose an outsider would be better fitted for the smooth and harmonious work of a Corporation election.

Mr. Susil Ch. Sen regretted that he could not see eye to eye either with Mr. Ispahani or Mr. Watson. So long as the Government were divorced from the affairs of the Corporation they could be deemed to be the third party. But they all knew the deep interest the Government had been taking in the matter of the election to the Calcutta Corporation. How could they know that the Government would not nominate a man who would give a pull to the party the latter favoured? Theoretically, it might be alleged that certain sitting Councillors had influence over the Chief Executive Officer but no definite proof of that had ever been received and no specific allegation had been made. He would, therefore, oppose Mr. Ispahani's motion.

Mr. Narendra Nath Dalal held that the argument which Mr. Ispahani had used against the Chief Executive Officer might be applied in the case of the Officer who might be appointed Election Officer by the Government.

Although Mr. [illegible] Roy Chowdhury did not mean any aspersion on the Chief Executive Officer his experience had told him that there had been great impediments in the past in the holding of a proper election.

Mr. Susil Ch. Sen: On a point of information, how many elections had Mr. Roy Chowdhury to contest (laughter).

Mr. Roy Chowdhury: Because I have not been in any election I am, therefore, in a better position to watch its course.

Proceeding Mr. Roy Chowdhury felt that elections should be conducted in a more satisfactory manner. The Chief Executive Officer had to depend upon Councillors for his existence, and they used to take advantage of their position. Naturally, the Chief Executive Officer had to be much embarrased, and it was proper that he should be relieved of that embarassment. There was no doubt that an independent person should be appointed in his place.

Mr. Hamoodur Rahman found nothing wrong if the present Government, in consonance with the practice in democratic constitutions, took a lively interest in municipal or legislative elections. There was nothing strange if certain members of the Bengal Government took interest in Corporation elections as members of a certain political party. The conduct of elections should be placed in the hands of an independent person who would not be favourably inclined or opposed to any sitting Councillor.

Mr. S. K. Chatterjee remarked that Mr. Hamoodur Rahman appeared to have wanted that the Corporation should be an officialised body.

Mr. N. C. Chatterjee deplored that Mr. Rahman had missed the spirit of Mr. Sen's observation. Mr. Sen had not said that a Minister, occupying a responsible position in the Bengal Cabinet, should not take interest in the municipal election. They were taking and would continue to take active and vigorous interest in the affairs of the Corporation by day and by night. But the question was, Mr. Chatterjee pointed out, whether the Councillor should allow the Ministers to have a hand in the running of the Corporation? Why should they make over their election to the hands of an official who might be nominated at the sweet will of a particular Minister who might have very active sympathy with a particular party or with a particular caucus who might get into the Corporation and utilise its resources for their own ends? The Government wanted to have a tight grip over the Corporation and the Councillors refused to hand over their power to a person whom the Ministry might appoint as the Election Officer. What guarantee was there for his honesty and integrity? Mr. Chatterjee submitted that the Corporation should not commit *harikiri* in the matter.

Mr. Sudhir Chandra Ray Chaudhuri also supported the recommendation of the Committee. He asked who was there to guarantee that an independent man would be forthcoming and that he would be above all reproach?

Mr. Debabrata Mukherjee, Deputy Chairman of the Estates and General Purposes Standing Committee, in reply to the debate said that in the Committee they were guided by the main idea that the Corporation was not going to surrender its rights and pivileges.

The recommendation was put to the vote and declared carried. Poll was demanded and by 44 votes to 86, 3 not voting, the House accepted the recommendation of the Committee.

As regards Clause (7) regarding the constituency in which a seat is reserved for members of the Scheduled Castes, *Mr. J. N. Mandal* moved as an amendment the deletion of the Committee's recommendation not accepting the suggestion contained in sub-rule (2) of Rule 48, which provides that "in a constituency in which a seat is reserved for members of the Scheduled Castes, the ballot paper shall also be rejected if the number of votes recorded thereon in favour of candidates not belonging to the Scheduled Castes exceeds the number of seats in that constituency not reserved for members of those castes."

Mr. Anukul Chandra Das also opposed the Committee's recommendation and appealed to all sections of the House to accept the Government proposal as in the draft rules.

Mr. N. C. Chatterjee, supporting Mr. Mandal, said that they could not have Hindu solidarity unless they brought the Scheduled Castes into their fold. They did not want separate electorates but a joint electorate which would bring about better feeling and better understanding between the Caste Hindu and the Scheduled Castes.

Acceding to the unanimous desire of the House, Mr. Debabrata Mukherjee, on behalf of the Estates and General Purposes Standing Committee, did not press for rejection of the Government proposal, which was eventually accepted by the House.

TRAMWAYS EXTENSION

Rajabazar-Shambazar Service

The Calcutta Tramways Company's new extension on Upper Circular Road from Rajabazar to Shambazar will be open to traffic on Sunday, the 1st March, thus completing a project which has been engaging the attention of the Company for several years.

The new line will permit of an almost unbroken and circular route from Park Circus to Shambazar, Baghbazar, Dalhousie Square and Esplanade and from there to the southern areas of the city. While the extension itself terminates at Shambazar junction which marks the stage, cars will run from the Gallif Street tram depot and tickets for Shambazar terminus will be available up to this destination.

DISCOVERER OF INSULIN KILLED

'Plane Crash

Ottawa, Feb. 24.—The Canadian Defence Headquarters announce that Sir Frederick Banting and two others were killed.

Earlier message stated :—

The aeroplane carrying the discoverer of Insulin, Sir Federick Banting, which has been missing since Friday, has been located. The Canadian Munitions Ministry made this announcement in the House of Commons to-day (Monday).

Mr. Howe said that a machine equipped with skis is on its way to investigate. A message was written in the snow near the grounded aircraft. Canadian officials in Montreal said that a man seen on the Newfoundland coast is believed to be Captain Mackey, Commander of the aeroplane.—*Reuter.*

Air Raid Precautions

Light Restrictions In City And Suburbs

IN exercise of the powers conferred by Clause (a) of Sub-Rule (1) of Rule 52 of the Defence of India Rules the Governor is pleased to make the following order which shall take effect from the date of its publication in the *Calcutta Gazette* of February 27, 1941, and shall apply to the town of Calcutta as defined in Section 3 of the Calcutta Police Act, 1866 together with the suburbs of Calcutta as defined by notification under Section 1 of the Calcutta Suburban Police Act, 1866 and the Port of Calcutta as defined by notification under Sec. 5 of the Indian Ports Act, 1908; the whole of Barrackpore sub-division and Tollygunge, Behala, Metiaburuz, Maheshtola and Budge Budge Police Stations in the District of 24-Parganas; Chinsurah, Serampore, Uttarpara, Bhadreswar and Magra Police Stations in the District of Hooghly; and Howrah, Golabari, Bawria, Sankrail, Sibpur, Bally, Malipanchghara and Uluberia Police Stations in the District of Howrah:—

ORDER

1. Subject to the provision of paragraph 2 no light shall be exhibited on the outside of any building or construction or on any land

2. No light shall be exhibited on the outside of any shop or place of public amusement or entertainment as defined in the Calcutta Police Act, 1866, (Bengal Act IV of 1866) and no light shall be used inside any shop in such a way that a direct ray of light can emanate and be visible from any angle outside the shop unless such light so exhibited or so used is screened by an opaque shade or thick or dark coloured material: provided that no light shall in any case be exhibited on the outside of such premises merely for the purpose of decoration or advertisement.

3 (i) The Commissioner of Police in the case of Calcutta and the District Magistrate elsewhere or any person authorised by the Commissioner of Police or the District Magistrate may direct any person to screen or extinguish any light if such light does not comply with the provisions of this order.

(ii) The Commissioner of Police in the case of Calcutta and the District Magistrate elsewhere may grant partial or total exemption in any particular case from the operation of this order; provided that all such exemptions shall be reported to the Provincial Government and shall be subject to any orders that may be passed by it.

4. Any person contravening the above order is liable on conviction to imprisonment for a term which may extend to six months and shall also be liable to fine.

5. In this order the expression *Calcutta* means the town of Calcutta as defined in Section 3 of the Calcutta Police Act, 1866, together with the suburbs of Calcutta as defined by notification under Section 1 of the Calcutta Suburban Police Act, 1866, and the Port of Calcutta as defined by notification under Section 5 of the Indian Ports Act, 1908.

ACHARYA PRAFULLA-JAYANTI CHEMICAL EXHIBITION

Journalists' Support To Commercial Museum Move

A large number of journlists responded to the invitation of the Chairman and members of the Advisory Board of Acharyya Roy Jayanti Chemical and Pharmaceutical Exhibition on Thursday evening at the Commercial Museum of the Corporation of Calcutta.

Dr. B. C. Guha, Chairman of the Advisory Board, explained to the journalists present that the organisers of the Exhibition wanted to exhibit on the solemn occasion of the 80th birthday anniversary of Acharyya P. C. Roy the scientific products of various technological and industrial laboratories in India with a view to their exploitation for the industrial development in this country. Dr. Guha added that the organisers stressed the necessity of exhibiting such products which were of recent origin in this country and had a great possibility in the industrial and commercial development.

Mr. Jnananjan Niyogi, Officer-in-charge of the Corporation Commercial Museum informed the gathering that very encouraging responses had been received from all over India including the States and Provincial Governments who had decided to send their exhibits, the cost of transporting which would be borne by the Corporation of Calcutta. Mr. Niyogi hoped that with the co-operation of the journalists the organisers would be able to attract the attention of the public as well as industries to make the Exhibition a success.

Mr. Tushar Kanti Ghosh of the *Amrita Bazar Patrika*, Mr. Prafulla Kumar Sarkar of the *Ananda Bazar Patrika*, Mr. Makhan Lal Sen of *Bharat* and Mr. Vivekananda Mukherjee of *Yugantar* assured the organisers that the journalists would co-operate with them in their noble mission.

ART IN INDUSTRY

The Premier On Its Importance

The importance of art in the development of industry was emphasized by Mr. A. K. Fazlul Huq, Premier of Bengal, when he opened the Art in Industry Exhibition at the Government School of Art, Chowringhee, Calcutta on Thursday last.

The time had come, he observed, when those who were interested in the welfare of this country and its youth should take into serious consideration the necessity of Bengal becoming great industrially and also of taking a definite step forward for the development of art and science.

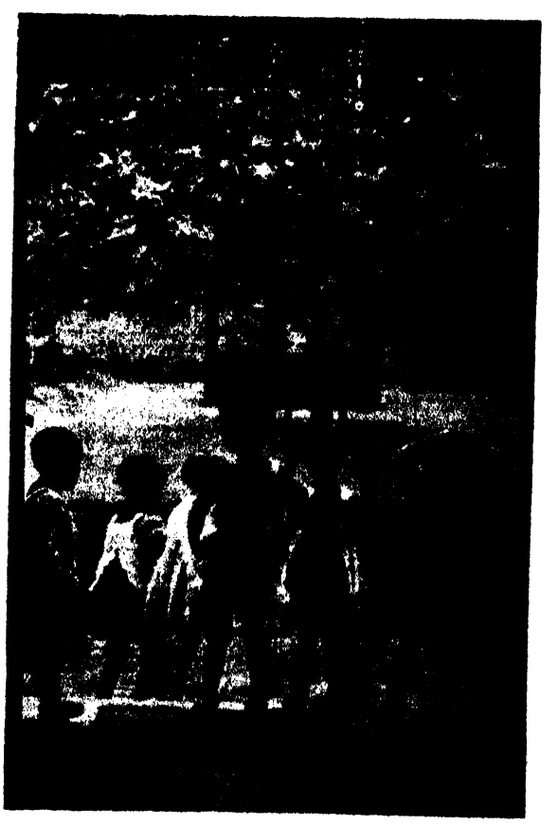
An exhibition of this kind, continued the Premier, was a welcome move because, it not merely afforded Indian students, skilled in art and science, an opportunity to make their talents known to the public but also enabled the industrialists to utilize their services in the sphere of industry. The Bengal Government appreciated the value of such an exhibition.

Mr. Mukul Dey, Principal of the Government School of Art, in welcoming Mr. Huq, pointed out the possibility of this exhibition becoming an annual event on a greatly extended scale. This offered a new field to artists throughout India, who, he hoped, would take advantage of the opportunities which had been placed before them. The work carried out for industry, he said, should be viewed as being every bit as important as other types of art, such as painting of murals, portraiture, etc.

MATTERS EDUCATIONAL

Special Article

Education In Japan



By

ADRIENNE MOORE

AFTER three and-a-half years of warfare Japan still stands united within. The masses absorb each news rendition of propaganda without a question. The nation's impregnable internal strength may be directly traced to the education system, which, in less than 60 years, has made a unified nation out of what was a group of semi-related feudal states. Education has achieved for Japan one language, one feeling and one mind. The strength and weakness of Japan lies in her system of learning.

Japan with some 47,000 educational institutions and 14,000,000 scholars (one fifth of her population) may boast of being the world's most literate nation next to Sweden. She has acquired 99·58 per cent. literacy since 1868, when the nation was opened to the world after 400 years of self-imposed solitude. By spending an average of 7·24 yen (a little over 7 rupees) per student annually she has created a universal pattern of thought which has built a citadel of national unity. On the other hand her system of complete uniformity wherein all text books, training and organization of teaching is identical to the utmost ends of the Empire has destroyed or at least stunted the growth of individuality and independent thought. Because of this uniformity, country schools and city schools have been subject to the same regulations with little or no regard to their relevancy or adaptability to the special needs of the locality. It is little wonder that propaganda emanating from Tokyo sweeps in an unbroken wave from one end of Japan to the other. Mass education has produced a mass mind. The Japanese people are a perfect example of how education can mould a people and form their personality.

The policy of the Japanese educational system is embodied in the Imperial Rescript issued on October, 30, 1890. Herein all are enjoined to be modest, harmonious, benevolent, studious, law observant and moral. Copies of this edict are given to every school boy in the land and on each October 30, all schools reread this document to the student body. The system of education was originally modelled after that of the French. It is highly centralized and all schools of the Empire are supervised by the Department of Education. The Department writes and publishes the text books, determines policy and prepares examinations. Local bodies are only required to contribute a certain amount of financial support. Even private schools, to be recognized by colleges and universities, must follow the general plan laid down by the Education Department. All schooling is free

A KINDERGARTEN SCHOOL—CHILDREN DURING RECESS

and books are extremely cheap. Those who cannot afford books are provided for in the primary years and even free meals are served to hungry children of the poor. Ambitious and poor boys may work during the day and go to free night schools at night.

The education regulations of 1886 specified that a student should progress from six years of compulsory primary education (primary years are co-educational) to secondary schools and thence to universities or colleges. The Empire was divided into eight sections in each of which was to be a university. Each university was to have 32 middle schools in its division and 210 elementary

schools. This plan has succeeded far beyond expectations. There are now about 26,000 elementary schools with 11,000,000 students, 555 middle schools 97 girls higher schools; 1,069 technical schools; 15,306 technical continuation schools; 32 colleges preparatory schools (Koto Gakko); 117 special colleges and 45 universities. There are also 56 technical colleges. All teachers, if not trained in the Government's normal schools, must pass a Government examination.

To pass from one type of school to another is the bane of a Japanese school child's life. Stiff examinations are required. Young children of 11 or 12 spend late hours studying. In fact, in all grades home work is vast in quantity due to the fact that the system of education lays stress on memorization.

The biggest burden which a Japanese school child has is his own language. During the primary years he spends from 10 to 12 hours a week studying Japanese. Arithmetic is second in importance. In middle school the stress is about the same. Each child must learn four systems of writing: 12,000 or more Chinese characters, two systems of simplified phonetic writing and the Roman characters. The language is almost entirely idiomatic. Yet from Hokkadio to the tip of Kyushu, Tokyo "ben" (dialect) is now spoken. Once Japan could hardly understand herself. To-day, after only 60 years, the dialects have practically vanished.

Moral training looms large in the training of a Japanese school boy or girl. From the first grade up to college and beyond there is a continual stream of lectures on the ethics of Japan and national policy. Morals take the place of religious training in the schools. Since the war, such courses have become thought guidance.

Though religious training is not given in school, the official religions of Japan, Shintoism and Bhuddhism, are controlled by the Department of Education. Christianity has recently been included in this supervision. Though the money for their institutions may come from abroad, the Christian missionaries must follow the policy laid down by the Department of Education. Any teaching which may directly or indirectly criticise national policy would mean an immediate ban on the institution. Pacificism is included among the banned subjects.

Up to college years, it may be said that a Japanese student spends most of his time on languages. In the middle school he takes on two foreign languages. There has been much recent criticism of this over-stress on language. The criticism is justified as it is pratically impossible to get around Japan without Japanese. The Japanese are not apt at language though it is as much a fault of the system as the material. Students learn to read and write but seldom if ever to speak a foreign tongue. The classes are immense, personal attention is nil, the lecture system is relied upon and the teachers themselves can seldom properly pronounce the language they are teaching. The average Japanese student, however, is not drawn into this web of futility as after primary school most Japanese boys go to technical schools and the girls go to work. Only about two per cent. of Japan's 11,000,000 primary school students find their way up through middle schools and into colleges or universities. But even middle school students who are not preparing for college are required to study English.

Top—Students take a practical lesson on their school farm

Bottom—Archery practice in Girls' High School

A Middle School Building and Playground

University education is not impossible for the poorest of Japanese. Its costs are very low. The best university in the land—Tokyo Imperial University—is the cheapest. Life in such an institution is one of continuous study. Campus life as known in England and the United States is unknown in Japan. All Japanese students are "grinds". Students cling to their middle school associations and friends instead of making new ones in the University.

Graduation from a Japanese University means the time has come for job hunting but things are simplified for graduates of first ranking institutions, for big firms apply to the schools for young men. Examinations are given before graduation for business positions. Since the present Sino-Japanese War began there has been such a need, especially for men trained in technical fields, that nearly all graduates have jobs arranged for before their final examinations.

Even more important to-day than basic education in Japan is the personality and ideological training which reaches students under the supervision of the Department of Education. Beginning with the moral lectures which they receive from the first grade, the field has now been extended to include Japanese culture and polity. In fact, there is so much stress on things Japanese that an average Japanese, though well educated, knows practically nothing about anything not related to Japan. The Japanese mind which opened itself to the world in 1868 after 400 years of introversion is again turned inward. This is especially so since 1937. The war has let forth all the latent reactionary forces. Western culture, other than medicine and science, is condemned openly. European painting, dancing, ways of thought and social customs are castigated. Ballroom dancing has been made illegal.

Children of Elementary School gargling as a precaution against infectious diseases

The morals of the masses are supervised by the police but the Department of Education is also busy. There are prefectural Institutes for National Culture and Thought Guidance. The Department provides for a council whose function it is to develop the teaching and training in schools of national culture. In 1932, the Government Research Institute of National Culture was established under the personal direction of the Minister of Education. Its purpose is "to further the national culture and create a new needed culture". It collects data and trains teachers. These teachers now also are required to clarify the national polity to students.

One of the most interesting movements set afoot by the Department of Education is promotion of Pupils and Students Warfare Society. The purpose of this organization is to prevent agitation and unrest among students. Attention is given to students' financial and social conditions as well as to studies in this endeavour. Students who are found to be dangerous material are asked to attend a series of appropiate lectures for a year or longer—depending upon whether he satisfies his teachers. The more dangerous ones, of course, are sent to jail. It is the function of the Coaching Teaching system to destroy radical thoughts. Under this plan, large school classes are divided into groups of 20 or 30 students under a supervisor. These groups discuss the affairs of the day.

Nationalism is found in every bend of the Japanese educational system. More recently, under firebrand, handle-bar whiskered General Araki (Education Minister) there was an overhauling of the Tokyo Imperial University. The General demanded that all liberal-minded teachers and their text books be put out of the institution. These men and their ideas had been accepted for ten years or more. The University protested that it was an autonomous body which handled its own affairs. But the belligerent General won. He also had primary school histories rewritten in order than children might know Japan's true part in the China affair and its place in the world. The Japanese education system has indeed become a servant of militant thought.

The London County Council spends more on elementary education alone than the British Government in India does on sorts of education combined in the whole of British India

Smoke Nuisance In Calcutta

[By Sir Chandra Bose, L.M.S., *Retired Sanitary Officer, Corporation of Calcutta*]

THE chief blots of Calcutta are the dust, the mosquito and the smoke nuisances. Of these the dust nuisance has almost been allayed with the gradual paving of the footpaths and lining of the road surfaces with asphalt. The mosquito nuisance is being tackled as the result of the late Health Officer, Dr. F. T. Pearse's pioneer efforts by organisation of Mosquito Brigades, the gradual sanitary improvements of this city and the operations of the Improvement Trust and of the Mosquito Department after its reorganisation some years ago. The smoke nuisance, however, still continues in an aggravated form. Lord Curzon, Viceroy and Governor-General of India, who was very fond of Calcutta, and beautified Calcutta in various ways wanted to make this City of palaces, the Queen of Asia by ridding this city of its smoke nuisance and with that end in view, he passed the smoke Nuisance Act, to control the smoke arising from mills and factories. He, however, left untouched the smoke arising from domestic hearths in this city.

The smoke from factories and mills, however, has since then been appreciably diminishing with their gradual electrification and their working with oil engines, but with the rapid expansion of the city and increase of the number of houses and *bustees*, the smoke nuisance has become so aggravated that it has now become a positive menace to public health, as this fair city remains enveloped by a dense cloud of smoke during the cold weather and at other seasons its atmosphere is charged with smoke more or less.

The effect of this upon the health of the citizens and specially of the female folks who have to remain indoors, has been disastrous (*vide* the late Health Officer, Dr. H. M. Crake's report) and no wonder that Tuberculosis which was rather an uncommon thing before has now been so very rampant.

Composition Of Smoke And Its Ill Effects

Ordinary smoke consists of unburned carbon particles, hydro-carbons and other pyroligneous bodies, some poisonous gases, mineral acids etc.

Domestic smoke is relatively rich in hydro-carbons and soot and owing to the presence of large proportion of tar adheres to any object upon which it falls and is very obnoxious and destructive. The presence of sulphur in the smoke contributes to the pollution of the atmosphere. It is found in the form of sulphur acids, carbon bisulphide, ammonium sulphide, etc. It has been estimated that the damage to the property by smoke is about 5 pounds per inhabitant per annum in England. Few realise the extent of the damage to property caused by smoke or the seriousness of the menace it holds out to public health. A smoky atmosphere directly irritates the upper respiratory passages and increases the mortality from pulmonary diseases. Both smoke and soot predispose pulmonary tuberculosis. A smoky atmosphere is a source of dirt, shuts out light and the ultra-violet rays of the sun which have germicidal property and exert other beneficial actions upon the health and constitution of a person. It has been estimated that in Calcutta daily over 50 tons of soot escape into and pollute the atmosphere.

Smoke also injures vegetation by choking up the stomata of the leaves and also by the action of the acid.

Cause Of Smoke

There are on a modest computation about 7,50,000 hearths which are fired twice every day. Coke is used in these hearths as a fuel which however gives out little or no smoke but to ignite the coke, dried cowdung cakes, wood chips or old rags

---

A SCHOOL FOR TRAFFIC VIOLATORS

Cleveland inaugurated its first school of instruction for traffic violators on September 6, with a beginning class of 45. The sessions are held 3 nights every 2 weeks from 7 :00 to 9 :00, and the curricula consists of city traffic ordinances supplemented by safety films.

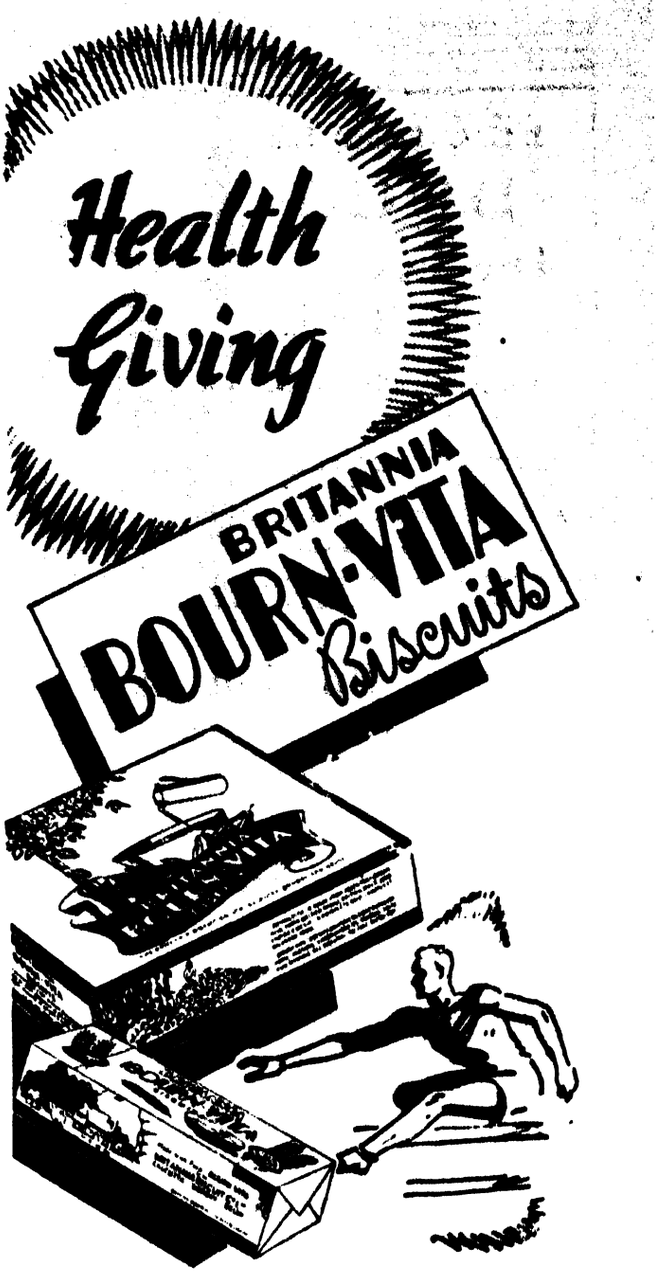
The school resulted from efforts of the Director of the Department of Public Safety and the Cleveland Safety Council. It was made possible by the active co-operation of judges of the traffic court, who have taken the stand that violators will be benefited more by attending this school than by being punished by either fines or imprisonment. A police captain, who is a graduate of the FBI National Police Academy and Northwestern University Traffic Institute, will supervise the school.

soaked in kerosene oil are set fire to and allowed to burn slowly.

In this process both in the morning and evening a large volume of smoke is produced which not only pollutes the atmosphere but soil clothings, beddings, furniture and all else around.

How To Prevent The Smoke Nuisance

With the introduction of gas and electricity in this city, this problem has become to a great extent easy of solution. There are in this city 71,488 pucca masonry houses and 5,067 *bustees* with a large number of huts in each. Generally the rich and the well-to-do occupiers of the pucca houses having regard to their means can justly be pursuaded to use electricity or gas as fuel and the cost would not be more than what they can bear. If the Gas and Electric Companies be induced to instal the necessary stoves and fittings at reduced rates and supply gas or electricity at special cheap rates for cooking purposes to the citizens as they do in case of manufacturing concerns, there would not be any appreciable increase of cost, considering that this would save the cost of lighting each hearth in the above mentioned way.



As regards people who would not use gas or electricity and men of moderate or poor means who live in *pucca* houses or *bustees*, they can ignite the coke of their hearth by means of charcoal cakes or balls (about a dozen would be sufficient) or wood charcoal being placed over the grating underneath the coke and set fire to by burning a very small quantity of paper etc., from underneath the grating of the hearth, or by placing a lighted kerosene or other oil lamp underneath the grating. This would not involve them any extra cost beyond what they incur at present which varies from annas eight to twelve annas per month for each hearth.

Necessary bye-laws should be framed under Section 478 of the Calcuta Municipal Act on the aforesaid lines. As persuasion is of no avail and as no reform can be initiated without penal laws, failure to comply with the provisions of the bye-laws should be made penal under Sections 488 and 489. The Health Officer should be empowered to administer these bye-laws and issue necessary notices giving him sufficient power to exercise his discretion in the beginning.

The Health Publicity Department of the Corporation should at the same time popularise these measures by distribution of leaflets and lantern lectures and actual demonstrations amongst the citizens in collaboration with the officers of the Smoke Nuisances Commission of the Government.

THE NEED OF NOISE ABATEMENT

Noise interferes with the efficiency of workers to the extent that it costs American business and industry $2,000,000 a day. . . . The elimination of unnecessary noise, or at least its reduction, in cities, offices and homes is the prime objective of the noise-abatement movement. Business is interested because it recognizes that quiet surroundings lead to better work and lower operating costs. The public is interested because it realizes that a quiet city is a pleasanter and more healthful place in which to live.—*The American City.*

Building And Architecture In India

[By Raja Ram, B.Sc., A.M.Inst.C.E., M.Inst. Mun. & Cy.E., F.R.San.I., etc.
Sometime Principal, Thomason College of Civil Engineering, Roorkee and Late Malarial Engineer, Indian Research Fund Association.]

PEOPLE in India do not yet fully realise that Buildings and Architecture are in the background of all human activity; they are true indices of health, wealth, national efficiency, and culture of a nation, and as such are indissolubly connected with all future and even present national planning and reconstruction.

A few mediaeval buildings like the Taj Mahal at Agra and some ancient temples and buildings might appeal to the emotional as the greatest architectural monuments in the country worthy of reverence and worship, but to the myriads of working men and women looking from the standpoint of national culture and welfare, a vista of architecturally and scientifically planned villages and towns with beautiful, healthy, and comfortable houses lining their cleanly built streets and roads, and enhancing the beauty of the countryside and landscape would obviously be far more valuable.

One has to admit that no progressive nation that wants to live and survive, and, therefore, keep pace with the times can stick indefinitely to any set type of building construction and architecture, no matter how beautiful and perfect they might have appeared at the time of their construction. The type and style will have to change with circumstances and times as well as with the discovery of new methods of construction, materials, and scientific inventions and discoveries. It is obvious that at the present moment owing to want of a proper organization full use is not being made of scientific discoveries that are continuously being made in many civilised countries of the world. In order to do so a Central Building Research Department with branches in all the provinces is necessary. The function of such a department would be not only to attempt to find methods of making the best possible use of existing materials, but also to improve them and discover new ones. The Building Research Department can be attached to the Scientific and Industrial Research and Development Board of the Government. Furthermore for Building research, well-equipped laboratories for testing materials and properly trained research workers and directors would be necessary. The activities of the Building Research Department should include the study of all the subjects connected with buildings and architecture, and town and country planning, such as housing for various classes of people, building design, rural structures, arboriculture, planning of parks and gardens, internal decorations, effect of weather on buildings and their materials etc., etc. In order to popularise the discoveries of the Building Research Department and Information Bureau to advise the public on the subjects will also have to be set up.

It is likely that during the course of research the Department may find it necessary off and on to consult educationists, sociologists, industrialists economists, health and military authorities; facilities for such consultation will have to be provided.

It may be pertinent to remark here that up to the present moment owing to her subordinate political position India has been following the lead of Great Britain almost blindly in all her scientific and engineering activities, though Indian scientists and advanced engineers have been conscious of the fact that in a large number of scientific and engineering matters Great Britain is often twenty years or so behind other advanced countries of the world, and India is fifty to a hundred years behind Great Britain. That being the case Indians ought in future to look for guidance in such matters to other countries of the world also.

So far as the existing engineering, technical, and architectural schools and colleges in India are concerned, their courses of instruction of building construction and architecture, if they have any, are not advanced and comprehensive enough, and the staff of some of them is hoary and ancient. Steps ought to be taken to overhaul them. It is also evident from the large number of candidates that are refused admission to engineering schools and colleges every year in this country that the existing accommodation in them is not adequate. Therefore, more and modern type of such institutions are required. Some of the bigger corporations and municipalities in India, like those of Calcutta, Karachi etc., can start classes for instruction in building and architecture and utilise the local and provincial talents for instruction in day and evening classes.

However, it is not the training of only architects and engineers that will solve our problems. The training and turning out of first class architectural draughtsmen and builders and masons is equally necessary for the newer type of work, for without them even the greatest engineer and architect would be helpless.

It may be remarked here in passing that so far as the public in India is concerned the problem of scientific engineering and architectural education did not exist in the past and does not exist even to the present day. The little consciousness that has been aroused amongst some of our countrymen about the call of architecture and scientific building is mainly due to the activities of such selfless and enthusiastic workers as Mr. Sris Chatterjee, the well-known architect of Calcutta.

But provision for professional education training such as has been mentioned above can not be an end in itself. Steps will have to be taken to bring the most modern technique into service in the Public Works Departments in India. Even when all that is required is done immediate results can not be expected. The beneficial effects of reforms will become evident only after twenty years or so of their introduction. By doing all that, we will be only preparing the ground for the coming of our greatest architects and builders in the future. In this connection it may be remarked that the incompetency of the officers in the present bureaucratic government does not very often produce immediate all-round inefficiency, which is more acutely felt by people who come long after they (the officers) have disappeared from the scene.

The main object of the suggestion made above is to develop and reconstruct our villages and towns of the present and the future. One is led thus to consider the feasibility and desirability of utilising the services of the very efficient and disciplined corps of Indian Sappers and Miners for such rural reconstruction after the War is over. According to a notification of the Army Department in India there will be within a short period an army of about 500,000 trained Indian soldiers. If including the Sappers, who are specially trained for building and allied work, 400,000 Indian soldiers can be employed on rural reconstruction in India an excellent start can be made. There are about 700,000 villages in India, and if 7,000 to 14,000 villages are reconstructed by the Sappers and soldiers in a year a programme of reconstruction spread over fifty to a hundred years can be drawn up.

This can be possible only if popular representative governments are formed at the centre, cooperating with the Provincial Governments of a similar type, without which the fruition of national planning and reconstruction will be a problem postponed *sine die*.

Before concluding this article it may not be out of place to briefly notice a remark and suggestion made by a distinguished officer of the Government of India at the last session of the Indian Roads Congress that educated Indians should render personal help in the building of *kutcha* village roads. If this suggestion is acted upon it will perpetuate amateurishness and, therefore, inefficiency. May one remind the distinguished officer that these are the days of specialisation and experts, and India can ill afford to encourage amateurishness in public works of the highest importance such as road construction.

LOSS TO BUILDING DEPARTMENT

The members of the Building Department assembled at a meeting on the 25th February to condole the untimely death of Mr. Saroj Kumar Chatterjee, Building Inspector. Councillor Dhirendra Nath Ghosh presided over the meeting and spoke in high terms about the qualities of head and heart of the deceased officer. Resolutions placing on record the Department's profound sense of sorrow at the sad and untimely death of Mr. Chatterjee, Building Inspector, who rendered twenty-two years' faithful service to the Corporation and was one of the most popular members of the staff and conveying its deep sympathy with the members of the bereaved family.

The City Architect's Department was closed at 2 p.m. on the 25th instant, under orders of the Chief Executive Officer in honour of the deceased who expired at the Charmichael Medical College Hospital on the 23rd instant.

The meetings of the Buildings Committees Nos. I and II fixed for the 25th instant were adjourned as a mark of respect to his memory.

CALCUTTA NEWS & VIEWS A Digest

VIVEKANANDA BIRTH ANNIVERSARY

Presiding at the 87th birth anniversary celebrations of Swami Vivekananda at the Calcutta University Institute on Saturday last, Sir Sarvapalli Radhakrishnan deprecated the growing tendency among young men and women to copy modern civilisation and advised them to be loyal to the ideals represented by Indian civilisation.

Was young India to remain satisfied with "this high-pressure machine civilisation" which had brought the world to its present unfortunate position, he asked. He appealed to young people to consider whether such a civilisation could be regarded as fundamentally sound and one worth copying and whether it was not time for them to get back to a civilisation whose principles were more just and sound than those of a wholly materialistic civilisation?

Sir Sarvapalli emphasised that Swami Vivekananda stood for what might be regarded as the spiritual equality of the whole humanity. Swami Vivekananda stood for that great ideal and that was the ideal represented by Indian civilisation. Swami Vivekananda thought of man in terms of a universal spirit.

"If you are radically-minded," concluded Sir Sarvapalli, "ask yourselves the question whether you are going to reduce man to the position of a mere political creature or a mere complex of social relations? If you believe in the vital divine spark in man, do not for a moment hesitate to accept the great truth of which Swami Vivekananda was a mighty exponent."

Professor Benoy Kumar Sarkar and Mr. N. C. Chatterjee, who also addressed the meeting, spoke on the various aspects of Vivekananda's services to India and the world.

Madame Sophia Wadia, Honorary Founder-Secretary, P. E. N. Club (India) and Editor, "Aryan Path," (Bombay) said that she was a great believer in such celebrations recalling the anniversary of great men who had spent their lives in service, more so when that service had been truly service of the soul and she believed in these celebrations because through them souls of living men could find their own inspiration, rekindling the flame of their own devotion and expressing itself in items of energation, resolve and determination.

When she thought of Swami Vivekananda her attention was struck by the name itself. "In the name itself, *Vivekananda*," she remarked, "we find a message for all of us, a message to apply practically in our own lives. Do we not need *Viveka*, discrimination, in relation to our mind? Do we not need *Anandam* in relation to equipose, calm and tranquility of our hearts, our feelings, our emotions? Let *Viveka* be the discipline of our mind's life and let *Anandam* be the discipline of our heart's life. And let the two find themselves united through *Vairagya*, dispassion, not the dispassion which manifests itself in indifference but the dispassion which transcends the egoism and the selfishness of the personality. Let these three things, *Viveka*, *Vairagya* and *Anandam* be a living message to them—*Viveka* to begin constructive efforts in relation to our mind and become creative in labour and service of humanity, *Vairagya*, dispassion which aims at curbing our selfishness and controlling the ebullition of our lower nature, and which will sustain our resolve and preserve our determination and then *Anandam*, joy, peace, supreme bliss, which will come when we resolve to give up the joy of the personality, the happiness of the mere feeling in separated tendencies."

MADAME WADIA ON SPIRITUAL DISCIPLINE

Madame Sophia Wadia, Honorary Founder-Secretary of the P. E. N. Club (India) spoke on "Spiritual Alchemy" at a women's meeting at the Y. W. C. A., 134, Corporation Street, Calcutta, on Monday, the 24th February.

The meeting was held under the auspices of the Bengal Presidency Council of Women, the Bengal Moslem Ladies Association and the Young Women's Christian Association. Dowager Maharani Sucharu Devi of Mayurbhanj presided.

Madame Wadia said that love and service were the two great powers that existed in the world to-day. Great as those two powers were, when they combined they became greater and deeper still. As the alchemists of old transformed iron into gold, so spiritual alchemy transmuted the base metal of the lower nature of men and women into the high metal of spiritual nature. They should keep in mind the possibility of human evolution not only in terms of the ideals to be achieved but of the dangers and pitfalls which confronted them. It was up to each of them to learn that spiritual training and discipline which would teach them to curb their lower self and bring out their higher self.

The first step in spiritual alchemy, Madame Wadia remarked, was to become independent thinkers. In order to transmute that which was low in them the mind must be liberalized and the law of universality applied to one's mind. Problems should be approached from a universal point of view. They should bring forth from their human nature the very best and the highest. Men and women were makers of their own destiny, and they should so discipline themselves as to make their personality respond to the God within them.

ECONOMICS OF HANDLOOM INDUSTRY

A plea for adjusting the relation between the machinery and the man was put forward by Dr. B. C. Roy presiding over a meeting at the hall of the Commercial Museum, Corporation of Calcutta, on Sunday last when Dr. Sudhir Sen, Secretary, lately the head of the Research Section of the Rural Reconstruction Department of Visva-Bharathi, delivered a lecture on "Economics of the Handloom Industry."

Continuing Dr. Roy said that the cotton mills in Bengal need not be nervous about the development of handloom industry inasmuch as major portion of piecegoods used in Bengal was being imported from outside and even in Bengal some of the mills were passing into the hands of non-Bengalees. Dr. Roy was of opinion that the problem of mass unemployment could not be solved unless the idle hours of those engaged in agriculture were utilizing in some cottage industry. Dr. Roy thought that a great responsibility lay on the Bengali consumers and observed in this connection that those who could not afford to purchase *Khaddar* might help thousands of weavers in Bengal by purchasing handloom products.

Dr. Roy also referred to the difficulties experienced by the weavers, who were often compelled to purchase yarn at a high price and he thought if some capitalists could invest in running a mill for producing yarn for the weavers, a great headway might be made in this direction.

Mr. Jnananjan Niyogi, Officer-in-charge of the Museum, said that State aid in this behalf was essential.

With a view to giving adequate protection to handloom industry the speaker of the evening Dr. Sen suggested that all designs approved by a Handloom Weaver's Association should be patented so that the mills could be legally prevented from imitating them. Besides establishment of such an association, Dr. Sen advocated the foundation of an industrial arts school where designs suitable not only for the handloom industry but also for other cottage industries would be systematically studied on the lines followed in a German Kunstgewerbaschule. Such a marriage between art and economics, he said, will considerably reinforce the prospects of most of our cottage industries. Dr. Sen also suggested the creation of a body like All-India Spinners Association, of course with a moderately paid staff, for marketing of the handloom products and observed that the ultimate guarantee of the future of the handloom industry, as of every other indigenous industry organised either on cottage or on factory basis, lay in the support of the consumers whose responsibility in this country was all the greater because in every other country the Government of the land was a jealous guardian of the economic interests of the nation.

TRAFFIC CONTROL IN DALHOUSIE SQUARE

"One way" traffic in a clock-wise direction in and around Dalhousie Square, better described as the "office quarter" of the city, is the latest scheme propounded by the Commissioner of Police for solving the traffic problems in the area.

The scheme is already engaging the attention of the authorities concerned and the different Chambers and commercial bodies have been requested to submit their views on it.

In his letter the Police Commissioner states that, in addition to the existing problems, the opening of the new approach road to the Howrah Bridge must be taken into consideration. Briefly, it is proposed that traffic (with the exception of tramway traffic) should proceed in a clock-wise direction around Dalhousie Square. This would mean that traffic going out of Koilaghat Road would be compelled to turn left, and that, traffic proceeding from south to north along Old Court House Street would have to turn left at the Mangoe Lane crossing.

Likewise, traffic proceeding from east to west along Bowbazar Street would have to turn left at Dalhousie Square crossing and traffic running north to south from Clive Street would have to turn left at the Dalhousie Square crossing.

It is, however, not intended to interfere with traffic in Lyons Range, but traffic around St. Andrew's Church would be "one way" and must be changed so that on the road to the west of St. Andrew's Church, traffic would be from south to north only and on the road to the east of the church it would be from north to south.

ASTANGA AYURVEDA VIDYALYA

The Silver Jubilee of the Jamini Bhusan Astanga Ayurveda Vidyalaya was celebrated on last Saturday at the premises of the Vidyalaya. Sir Sarvapalli Radhakrishnan presided over the function. On this occasion the Rt. Hon'ble Lord Sinha of Raipur also laid the foundation stone of Sir Manmatha Nath X'ray Annexe, which is built up for housing apparatus to be set up for the treatment of tubercular patients.

Several distinguished speakers including the President paid a tribute to the services which the institution had been doing to rehabilitate the science of Ayurveda on the foundation of modern achievements.

"SUBHAS DAY" IN CALCUTTA

Men and women belonging to different castes and creeds reiterated their faith in the leadership of Mr. Subhas Chandra Bose and prayed for his safety and health in numerous and largely attended public meetings held on Sunday afternoon in different parks and squares in the city and in the suburbs in observance of the "All-India Subhas Day".

A large number of processions organised on this occasion by the different District Congress Committees, the Bengal Provincial Forward Bloc and Forward Bloc Students' Bereau paraded the main thoroughfares of the city and terminated at Sraddhananda Park where the meeting commenced amid prolonged shouts of *Bande Mataram* and *Subhas Chandra ki Jai*. Mr. Rajendra Chandra Deb presided over the meeting.

At the close of the meeting a big procession came out of the Sradhananda Park, paraded several streets and terminated at College Street.

A similar meeting held in connection with the "Subhas Day" at Hazra Park on Sunday afternoon under the presidency of Mr. Phanindranath Brahma, Deputy Mayor of Calcutta.

Speakers at the different meetings expressed their deep concern at the sudden disappearance of Mr. Bose and pointed out that the only way they could show their love and respect to their beloved leader was to have the same mission and objective in life as that was Mr. Bose's, namely, the attainment of the independence of the country.

PROPOSED INFECTIOUS DISEASES HOSPITAL

The Committee appointed by the Government of Bengal to select a site in the suburbs of Calcutta for the proposed Infectious Diseases Hospital met for the first time on Sunday at Writers Buildings under the presidentship of Maj-Gen. P. S. Mills, Surgeon-General, Bengal.

After a discussion on the matter the members visited the Manicktola area and inspected a site there.

(Continued on page 522)

CIVIC NEWS FROM FAR & NEAR

SYLHET MUNICIPALITY

In view of the impending general election of the Sylhet Municipality, the Government of Assam have decided not to undertake, for the present, the scheme for the extension of the Municipal Area. It is further understood that the local authorities have recommended June 25th as the date for general election.

HINDU MAHASABHA SUCCESS AT MALDAH

All the eight Hindu Mahasabha candidates have been declared elected to the Maldah Municipality. Several hundred youngmen gathered at the different election booths with Hindu Sabha flags resulting in the withdrawal of the rival candidates.

BUILDING CONTROL IN DELHI

A Bill to control "ribbon" development in New Delhi's environs was introduced in the Central Assembly on the 25th February, by Mr. J. D. Tyson, Secretary, Education, Health and Lands.

It was explained that at present there is no legal power to control building development along the main roads in the Delhi province outside the Delhi and New Delhi municipal areas. Extra-municipal areas adjoining the main roads leading to important towns had obvious attractions as building, the occupant's of buildings in such areas could enjoy many of the amenities of town life without sharing the burden of municipal taxation of being subject to the control that ensured good sanitation or well-ordered development.

For example, uncontrolled development of roadside areas outside the municipal limits of New Delhi already threatened to become a serious obstacle to the future systematic expansion of New Delhi—an expansion which the growth of population was certain to render inevitable in the coming years.

The Bill enabled necessary control to be exercised over areas adjacent to main roads in order to prevent such problems developing in Delhi province. The Bill also included provision for control by means of licenses of the use of land for brick-fields and other similar purposes.

MINORITIES IN BOMBAY MUNICIPALITY

A move to secure larger representation of the minority communities by redistribution of municipal wards on a communal basis suffered a defeat at a recent meeting of the Bombay Corporation. The redistribution scheme was embodied in a resolution of a member of the Muslim League Party.

Complaining of inadequate representation of minority communities on account of sub-division of wards in a manner by which packed localities of a particular community are divided, the resolution demanded that the Commissioner be requested to submit a report as to how best it can be possible to secure proper representation of all communities without creating new constituencies.

The complaint of inadequate representation fell flat before the arguments of Mr. M. N. Talpade based on statistics. He established that for every 3,000 Hindus there was one representative. In that ratio the quota of Muslims should be 15, but actually they have 17 to-day. The same was the case with the Parsis. He, therefore, found no point in the complaint.

The proceedings on the motion took a different turn when Mr. R. S. Nimbkar, the Labour Member of the Corporation, put forward the plea that it was the labouring section of the population which has the lowest representation. He pointed out that for nearly two and a half lakhs of workers there were only four members barring reserved seats.

—Calcutta News & Views

(*Continued from page* 521)

The Committee will meet again shortly and inspect other sites in the east and north suburbs of the city.

Those present at the meeting included Lt.-Col. A. C. Chatterji, Director of Public Health, Bengal; Lt.-Col. B. G. Mallya, Superintendent of the Campbell Medical School; and Dr. S. N. Ghosh, Health Officer, Calcutta Corporation.

ACHARYA PRAFULLA CHANDRA

A *khaddar* towel, *dhoti*, bedsheet and a handmade *khaddar* bag were presented to Acharya Prafulla Chandra Roy on the occasion of the 80th birthday by Mr. J. N. Basu on behalf of the Sir Gooroodas Institute at Narkeldanga on Sunday last, when the seven-day celebration of the anniversary of the Institute was closed. Replying to the felicitations, Sir P. C. Roy said that in Bengali the word eighty also meant *asi*, and he was feeling the call from the other land. He further said that he would be really honoured if he could gain some place in the heart of his countrymen.

Sir P. C. Roy also declared the industrial exhibition of the institute closed.

LATE SWAMI TRIGUNATITYA OF BELUR MATH

At the the Anniversary Meeting of the Swamiji held by the Vivekananda Society at 77, Hari Ghose, on Saturday last, Swami Vamo Devanandaji of Belur Math delivered an interesting lecture on the life of Revered Swami Trigunatitananda before a big audience. It was unanimously resolved at the meeting that with a view to perpetuating the holy memory of the Swamiji—an illustrious devotee of Sree Ramkrishna and founder of the first Hindu Temple of America (San Francisco), the blind lane leading from premises Nos. 166D to 166, Upper Circular Road, which was his residential place—be named after him.

Letters TO THE EDITOR

[The Editor does not hold himself responsible for the views expressed by the correspondents]

The Budget Estimates

To THE EDITOR, "CALCUTTA MUNICIPAL GAZETTE."

SIR,—I beg to suggest that provision should be made in the Budget for the ensuing year for the following on the following grounds under the following Sections of the Calcutta Municipal Act :—

(1) Acquisition of land and buildings for the purpose of opening out of congested and unhealthy area and improvement thereof and erection of sanitary dwelling for the working and poorer classes under Section 468 of the Calcutta Municipal Act and improvement of insanitary *bustees* and erection of sanitary dwellings for the poorer classes under Section 351 of the said Act.

Bustee owners are enforced to open out roads, construct drains and execute other improvement works at heavy costs, but the Calcutta Corporation appears to be indifferent in the discharge of their duties imposed under Sections 468 and 351 of the Calcutta Municipal Act. These works can be done by raising a loan of five lakhs of rupees on interest at 4 per cent. per annum and this is the proper time to do so, as the money market in Bengal is very dull due to operation of the Money Lenders Act and the Bengal Agricultural Debators Act and specially restriction in the export and import of goods due to outbreak of the Great War.

(2) Purchase and maintenance of stud bulls for improvement of breed of cattle under Section 427 of the said Act.

This will improve the supply of pure milk in Calcutta.

(3) Establishment and maintenance of Veterinary Charitable Dispensaries in Calcutta under Section 477 of the said Act.

The rate of cattle mortality in Calcutta is very heavy and milk of the diseased cows and buffaloes causes the out-break of Phthisis and other dangerous diseases.

(4) Construction and maintenance of Industrial Schools under Section 477 of the said Act.

Time has come when industrial education should be granted with a view to develop Indian industries.

(5) Extension of Sankar Bose Road towards west to meet Alipore Road in accordance with the alignment long prescribed by the Corporation under Section 306 of the said Act.

It is regrettable that no new road has been constructed in the Alipore Ward since 1924 and the Calcutta Improvement Trust has not executed any improvement work in the said Ward.

(6) Construction of wooden foot-bridge over the Tolly's Nullah connecting Rashbehari Avenue with Chetla Central Road.

This is most urgent as the construction of a permanent bridge will be delayed due to the outbreak of the War.—Yours etc.

A. D. AUDDY,

15/A, Chetla Road, Alipore,
Calcutta, the 20th February, 1941.

LOSS TO MOTOR VECHICLES DEPARTMENT

Councillor Mohammad Israil writes :—

The Motor Vehicles Department suffered loss by the death of Syed Jumma Mia on the 20th February. He was an able worker, who was never afraid of hard work. He served the Calcutta Corporation for about 20 years and he was regarded as the best friend of his co-workers. He came of a respectable family of Saistabad of Barisal and in his private life he was kind and always ready to help any man in difficulty.

LEGAL INTELLIGENCE

LAHORE MUNICIPALITY

Suit For Damages

Whether the Secretary of State was properly impleaded as a party along with the Administrator of the Lahore Municipality was the important point of law decided on the 14th February, by a Division Bench of the Lahore High Court consisting of Mr. Justice Dalip Singh and Mr. Justice Ram Lall when Their Lordships passed a decree for Rs. 11,700 against both the Secretary of State and the Administrator, Lahore Municipality.

The plaintiffs in this case, Mst. Taj Bibi and others, sued the Municipal Committee through the Administrator and the Secretary of State for India in Council on the ground that the plaintiffs' house had been damaged by water leaking from the municipal pipes and certain ferrules which had entered the foundations of the plaintiffs' house causing the building to sink and a portion of it to fall down. The result according to the plaintiffs, was that the whole house became unsafe for public safety and the Administrator accordingly served on the plaintiffs a notice under Section 114 of the Punjab Municipal Act on 9th November, 1936 to demolish the building in question. Therefore, according to the plaintiffs, the house could not be repaired but had to be rebuilt and the plaintiffs claimed Rs. 14,000 damages as cost of rebuilding the house and Rs. 450 on account of damages for loss of rent for a certain period.

The trial court held on the evidence produced that the damage was due to the leakage of water caused by the breaking of three ferrules. It also held that the breaking of these three ferrules was due to the negligence of the Lahore Municipality. It therefore passed a decree for Rs. 13,790 with proportionate costs against both the defendants. Against this decision the Administrator and the Secretary of State appealed to the High Court.

Their Lordships deciding the appeals as well as the law point involved, as mentioned above, observed :—

"After hearing the counsel appearing for Administrator and the Advocate-General on behalf of the Secretary of State and the counsel for plaintiffs, we are quite clear that evidence shows that the damage was due to water getting into the foundations of the house owing to the breaking of these ferrules, thereby causing subsidence of the foundations resulting in the plaintiffs' house being damaged.

"There is, however, evidence showing that the method of connecting pipes with ferrules in the Lahore area and in other places in India is defective inasmuch as the connection

is made with galvanised iron pipes instead of coper pipes, the result being that a small subsidence of soil may cause ferrules to break.

"It is on the record that the Municipality have kept no plans of the water pipes of private connections throughout the city as required under the rule, and therefore, in the last 30 years, at any rate, if not more the mains and the ferrules have not been inspected by the Municipal Committee.

"Coupling all these facts together a strong probability is raised sufficient in our opinion to base a finding that the cause of the breaking of the ferrules was due to the negligence of the Municipal Committee, and that, therefore, the Administrator of the Municipal Committee as its successor was liable for the damages for the same.

SECRETARY OF STATE AS A PARTY

"We now come to the more difficult point, namely, as to whether the Secretary of State was the proper person to be joined with the Administrator of Lahore Municipality, in the suit. The contention of the learned Advocate-General is that no such provision is made in Section 238 of the Punjab Municipal Act that the property of the Municipality vests in His Majesty for the purposes of the Province and that His Majesty cannot be considered the representative of the Municipal Committee which has been superseded and the Secretary of State cannot be considered the proper person to be sued in respect of any claims against His Majesty, if such exist.

"In reply the learned counsel for the plaintiffs contends that Section 238 deals with a case where only the executive or representative of the Municipality had been superseded. The Municipality itself still exists. Its successor for the purposes of Administration is the Administrator. Its successor for the purposes of holding the property that vested in the Municipal Committee is His Majesty for the purposes of the Province. His Majesty, therefore, can be sued as being the legal representative of statutory heir of the superseded and non-existent Corporation and the Secretary of State is the only person who can be sued for any claim against His Majesty as representing the Crown.

"The matter is not free from difficulty, but we would consider on the whole that the argument of the learned counsel for the respondents is correct. It is true that His Majesty hold this property for the purposes of the Province. At the same time the section says that if the Municipal Committee is reconstituted, His Majesty will re-deliver the property to the Municipal Committee so reconstituted. It is sufficient to hold that His Majesty, if we may say so with all respect, is constituted as a statutory heir to the property of the Municipal Committee and therefore that property in his hands is still liable for the liabilities of the Municipal Committee. The only way in which His Majesty or the Crown can be sued in India is by a suit against the Secretary of State. We would, therefore, hold that the Secretary of State was properly impleaded as a party in this case.

"The result is that we would accept this appeal and give a decree to the plaintiffs for Rs. 11,000 with proportionate costs throughout against both defendants. The plaintiffs will have 6 per cent. per annum interest on this sum from the date of the institution of the suit till the date of realisation."

CORPORATION SCAVENGERS AND LABOUR UNION

FOR EXTENSION OF SERVICE TO CHIEF EXECUTIVE OFFICER

A general meeting of the members of the Calcutta Corporation Scavengers and Labour Union was held on the 16th February, 1941, at Beckbagan and the following resolutions were passed by the members unanimously :—

(1) That the Mayor, Aldermen and other Councillors of the Calcutta Corporation be requested to sanction further extension of service to Mr. J. C. Mukerjea, Chief Executive Officer for his good work for the rate-payers and all employees working in the Corporation of Calcutta . . . .

(2) That the attention of the Mayor and the Councillors be drawn to the sanction of dearness allowances to Government servants which has been recently announced in the newspapers and approved of by the Government to be paid to the employees working under them. Further, it may be seen that the Bombay and Madras Railway authorities recently sanctioned the dearness allowances to their low-paid servants. Under the circumstances this meeting request the Corporation to make an immediate sanction of dearness allowances to the low-paid employees of the Corporation.

THE Improvement Trust

The following extracts are taken from the Proceedings of the Meeting of the Calcutta Improvement Trust, held on Saturday, the 25th January, 1941, at 10-30 a.m.

Present :—Mr. C. W. Gurner, *Chairman*, Mr. A. J. Thompson, Mrs. Hasina Murshed, Mr. Sudhir Chandra Ray Chaudhuri, Mr. J. J. N. Birch, Mr. Md. Rafique and Sir Hari Sanker Paul, KT.

OBJECTIONS COMMITTEE

With reference to Resolution No. 9 of the Board Meeting held on the 18th January, 1941, the Board considered the Chairman's note of the 20th January, 1941, and *decided* by majority to appoint, under Section 20(1) (iii) of the Calcutta Improvement Act, Khan Bahadur Muhammad Abdul Momin, C.I.E., as a member of the Committee to hear objections to Improvement Scheme No. LIV (Topsia), Mr. S. C. Ray Chaudhuri, dissenting.

MANIKTALA IMPROVEMENT

The Board considered and approved of the reports and preliminary estimates for engineering works and land acquisition, submitted by the Chief Engineer and the Chief Valuer, for Scheme No. V—Maniktala (from Upper Circular Road to Ultadanga Main Road), framed in pursuance of the Board's Resolution No. 13 at their meeting on the 7th September, 1940.

Preliminary estimates for the scheme are as follows :—

	Rs.
Land, Gross	28,00,000
Recovery	9,00,000
Nett	19,00,000
Engineering Works	7,47,000

The Board resolved that the scheme, as framed, should be adopted and that it should be published, under Section 43 of the Calcutta Improvement Act.

AIR CONDITIONING

With reference to Resolution No. 23 of the Board Meeting, held on the 18th January, 1941, it was reported that both Messrs. Army and Navy Stores, Limited and Messrs. Volkart Brothers had confirmed their quotations for air conditioning Chairman's room and that order was being placed with Messrs. Volkart Brothers for installing carrier system with structural alterations at Rs. 2,686.

VITAL STATISTICS

For the City of Calcutta for the week ending 22nd February, 1941.

CITY OF CALCUTTA (TOWN AND SUBURBS)

The total number of deaths registered during the week was 851 against 864 and 892 in the two preceding weeks and higher than the corresponding week of the last year by 226. The general death-rate of the week was 38·7 per mille against 33·9 the mean of the last five years.

Town (Wards 1—25 and 27).

The number of deaths registered during the week ending 22nd February, 1941, was 716 against 765 and 774 in the two preceding weeks. There were 30 deaths from cholera, against 27 and 20 in the two preceding weeks. There were 138 deaths from small-pox during the week against 198 in the previous week. There were 4 deaths from influenza against 3 in the previous week. The mortality from fevers and bowel-complaints amounted to 29 and 64 respectively against 31 and 75 in the preceding week. The general death-rate of the week was 37·3 per mille per annum.

There were 33 imported deaths. Excluding these, the death-rate of the Town was 35·5.

There were 126 deaths from respiratory diseases against 126 in the previous week.

There were 56 deaths from tuberculosis against 51 in the previous week.

There were 139 deaths of infants under one year.

Suburbs (Wards 28—32).

The number of deaths registered was 135 against 99 and 118 in the two preceding weeks. Of these 3 were from cholera, 18 from small-pox, 2 from influenza, 5 from fevers, 16 from bowel-complaints and 17 from respiratory diseases. The death-rate of the suburbs (or added areas) was 49·4 per mille.

There were 9 imported deaths. Excluding these, the death-rate was 46·1.

There were 15 deaths from tuberculosis against 11 in the previous week.

There were 23 deaths of infants under one year.

S. S. Hogg Market,
The 15th February, 1941.

Cancellation of Alignment

It is notified for general information that the Corporation of Calcutta under powers vested in them in this behalf have by a resolution dated the 15th January, 1941, cancelled the portion, affecting premises No. 27, Gun Foundry Road and 29, Barrackpore Trunk Road of the alignment of the projected public street varying in width from 16 ft. to 20 ft. from Gun Foundry Road to Seal's Garden Lane in Ward 32 which was originally sanctioned by the Corporation on 6th July, 1938.

A copy of the plan showing the portion cancelled may be seen in the office of the Chief Valuer and Surveyor of the Corporation any day during office hours on payment of usual fees.

J. C. MUKERJEA,
Chief Executive Officer

Central Municipal Office,
The 11th February, 1941.

Notice to Rate-payers.

The attention of the rate-payers is invited to Section 190 of the Calcutta Municipal Act which provides for additional costs to be imposed if the bills are not paid within seven days from the date of presentation. Their attention is also invited to Section 191 of the Act which provides for moveable articles to be held under distraint and sold if the bills are not paid within seven days after the service of notices of demand. They are therefore requested to pay up their dues early as under the provisions of Section 149 of the said Act the rate bills for a quarter fall due and become payable within "the 15th of the first month of the quarter, to which they relate."

Defaulting ratepayers should note that if the arrears of rates are not paid when the bills are presented for payment, "action will be taken for their recovery under the provisions of the law."

Applications for reconsideration of assessment including those now pending will not be considered unless full payment of all the arrears is made by the applicants. If not paid up, steps for the recovery of such arrears will be taken under the provisions of law as in any other case.

J. C. MUKERJEA.
Chief Executive Officer.

Central Municipal Office.
The 14th January, 1941.

HOWRAH MUNICIPALITY

NOTICE

Separate sealed tenders in duplicate superscribed "Annual Tenders" and addressed to the Chairman for the supply of the following articles and execution of the following works and contracts for one year commencing from 1st April, 1941, to 31st March, 1942, are invited and will be received by the Secretary to the Municipality upto 2 p.m. on the 7th March, 1941 :—

The amount noted against each item should be deposited in cash to the Cashier as earnest money for the tender for the said item on or before 2 p.m. of the 6th March, 1941.

		Rs.
1.	Engine-room requirements	200
2.	Oils & Greases	100
3.	Alumino Ferric and Precipitant	1,000
4.	Petty works below Rs. 200. (Northern and Southern Divisions.)	100 for each division.
5.	Removal of cinders from Howrah Water Works at Serampore	50
6.	Sinking and re-sinking of tube-wells ...	100
7.	Lighting Oil Lamps	200
8.	Depot Metals (Northern & Southern Divisions)	500 for each division.

Each tender must be accompanied by a Cashier's certificate on the tender form to the effect that the earnest money required as above has been deposited. The earnest money shall be forfeited if the accepted tenderer withdraws his tender or when the tender is accepted either in full or in part, neglects or refuses to execute an agreement within a fortnight from the date of intimation to him of the acceptance of the tender and to deposit in cash at the time of execution of the agreement 10 per cent. of the tendered amount as security for the faithful performance of his contract.

Tender forms and schedules are obtainable from the Stores Department of this Municipality on payment of one anna -/1/- and eight -/8/- annas per copy respectively. Tenders must be submitted in duplicate in the specified forms and schedules purchased from the Municipality and tenders in any other form shall not be accepted. The conditions and requirements mentioned in the tender forms and schedules must be complied with. No tenders will be considered unless they are in the same unit as specified. Articles to be supplied and works to be done should conform to the descriptions given and specifications in force in this Municipality. In cases where samples have to be deposited articles supplied must be of the same quality as the samples. Such samples should be properly sealed and stamped and delivered on or before the last date for submission of tenders.

Tenders submitted incomplete in detail, not in accordance with the condition of this notice or with any unauthenticated additions or alterations in the rates or which are unsigned may not be considered.

The specifications as to the articles to be supplied or works to be executed and conditions of contract and supply and any other necessary information shall be furnished on application to the office of the undersigned on any working day between the hours of 3 and 5 p.m. except Saturday.

The Commissioners reserve the right to accept tenders whole or in part and to distribute the work under each item between more than one contractor. The quantities given are their approximate requirements and they reserve the right to take in excess quantities to the extent of 20 per cent. above the schedule or none at all. They do not bind themselves to accept the whole or any part of the lowest or any tender or to assign any reasons for the same.

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—
10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.
Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

A. QASIM,
Acting Supdt., S. S. Hogg Market.

Chronicle & Comment

Karachi Corporation

Karachi lying on the farthest end of India ranks with the leading Indian towns. With a modern port and aerodrome and with its strategic importance from a military point of view Karachi has a unique position. The importance of Karachi is really due to its position with the chain of railways connecting it with the rest of India. And the real pride of Karachi is its Municipal Corporation. The Karachi Corporation, though comparatively young, is an achievement in the domain of civic administration to be emulated by other Indian cities. The Corporation is of recent origin and enjoys considerable independence of action. Therefore, it has the promise of future and may achieve what others have failed to do through quibbles and squabbles.

The Corporation extends over an area of 71·41 sq. miles with a population of 247,791. The structure of its municipal organisation is modelled upon the Bombay and Rangoon Acts. The general administration of the Corporation is conducted by the Chief Officer appointed by the Corporation and finally approved of by the Government. The office of the Auditor is like that of the Accountant-General, and he can submit accounts direct to the spending committee.

The Administation Report of the Corporation of the City of Karachi for 1939-40 which we have before us has a happy tale to tell. The Corporation concentrated on the general problems of Municipal administration. A significant step was taken when the Karachi Corporation resolved to introduce adult franchise and submitted the proposal to the Government. The Government attitude is still undefined and the measure is awaiting sanction. More important is the proposal for the introduction of joint electorate in municipal elec-

SMALL-POX EPIDEMIC IN CALCUTTA
GET YOURSELF INOCULATED

tions. The Karachi Corporation intends to maintain harmonious relation between community and community in civic administration, and with that end in view expressed its readiness to supplement the election rules. The amended rules though approved by the Corporation cannot operate due to technical difficulties.

Public utility services are a part of the civic administration, and the municipal organization has the right to own them. In India these are owned and conducted by commercial bodies that have no community of interest with the municipalities. Nor would they like to spend anything on civic work, though every year records steady rise in their balance-sheets. The Karachi Corporation tried to bring the city bus-services under its own control. This was inspired by the idea of offering quick service and cheap fare. The matter though within the province of the municipal organisation required the sanction of the Provincial Government. The proposal was turned down by the Sind Government, the reason being the absence of surplus traffic for the new service. The question again came to the fore when there was an unwarranted increase in tram and bus fares. Both the tram and bus services in Karachi are owned by the East Indian Tramway, Limited, and this act of the Company challenged the attention of the Corporation. The Corporation insisted on opening an independent bus-service. The matter remains yet undecided, the Provincial Government remaining silent on it.

The housing question is a live problem in Indian cities. They are generally ill-constructed and the general population is badly housed. The Karachi Corporation is wide-awake to the problem, and its activities are confined to building up quarters for the lower middle class and workers. The working class population under the new scheme would be provided with better quarters at cheaper rent.

Altogether it is a pleasure to go through the Administration Report of the Karachi Municipality for 1939-40, and we congratulate the City Fathers and their able Chief Officer, Mr. T. J. Bhojwarni on their excellent record of work.

THE CITY OF LAHORE

Corporation Bill Passed

The Punjab Assembly passed in the afternoon of March 4, the City of Lahore Corporation Bill by 40 to 15 votes.

The Bill which contains over 400 clauses and has been before the House for over 16 months, was described by the Minister for Public Works as the longest and bulkiest piece of legislation ever placed before the House.

In the course of the debate, several members urged that the measure should be enforced as soon as possible. Begum Shah Nawaz urged the enfranchisement of women.

Replying to the debate Malik Khizar Hyat Khan, Minister for Public Works, said that what they wanted was good government for the city of Lahore. He assured the House that if they had any objection to the rules framed by the Government under the Act they would have an opportunity of placing their point of view before the Huse.

Emergency Tube-wells For Calcutta

It has been decided at a Conference held on Tuesday last at Writers Buildings that the Public Health Engineer of the Government of Bengal and the Chief Engineer of the Corporation of Calcutta should inspect the city area with a view to boring 2,500 tube wells to meet the drinking water requirements of the citizens in case the present system of drinking-water supply fails in times of emergency. Of the proposed 2,500 tube wells, 1,000 will be bored, each 250 feet deep, in sewered areas and 1,500 in unsewered areas, 100 feet deep each. An enquiry will also be made if it is feasible to commandeer the existing 1,000 tube wells in the city during such emergencies.

As to the cost of sinking these tube wells, no final arrangement, it is reported, has been reached The Corporation representatives maintained that as this was purely a defence measure the Corporation would not be prepared to contribute more than 10 p.c. of the cost of sinking them; the remainder of the cost should come from Government coffers, preferably from those of the Central Government.

In this connection it was also decided that an enquiry is to be made if some city tanks could be converted into reserve tanks for drinking purposes. An objection was raised on the strength of past experience that shallow-sinking tube wells in the city would be of no use as they were often found to be contaminated. It has been decided, therefore, that an experiment should be made by sinking half a dozen such tube wells in order to verify whether shallow-sinking tube wells really are useless

Those representing the Corporation at the Conference were Mr. A. R. Siddiqi, (Mayor), Mr. Phanindra Nath Brahma (Deputy Mayor), Mr. M. A. H. Ispahani, Mr. F. G. Watson, Mr. J. C. Mukerjea, (Chief Executive Officer) and Dr. B. N. Dey (the Chief Engineer of the Corporation.)

The Bengal Government were represented by the Hon. Nawab Bahadur of Dacca, Minister for Local Self-Government, the Hon. Mr. H. S. Suhrawardy, (Finance Minister), Col. A. C. Chatterjee, Director of Public Health, Bengal and the Engineer, Public Health, Bengal.

Industrial Museum At Delhi

The Corporation of Calcutta leads and others follow. After a number of years of the establishment of the Commercial Museum by the Corporation the Government of Bengal opened its own in Calcutta, and now suggestions for the establishment of a permanent Industrial Museum at the imperial capital have been invited from those interested in the proposal by the Government of India in a circular letter to the various Chambers of Commerce in India and others.

FEW PRICKS CAN SAVE YOU FROM SMALL-POX
GET THEM IN TIME

The letter states that the Twelfth Industries Conference, held at Lucknow in December last, decided to adjourn the consideration of the matter to the next Conference and resolved that in the meantime those interested in the question might be asked to furnish details to the Government of India so that a commercial exhibition on a permanent scale might be organised and might function permanently. The Conference further resolved that suggestions as regards the place where the proposed museum should be located and how it should be financed might also be invited.

The Secretary of the Associated Chambers of Commerce has circularised the Government of India's letter on the subject to all the constituent chambers and has requested them to communicate their views on the proposal direct to the Government of India.

Small-Pox In Calcutta

The incidence of Small-Pox has been increasing alarmingly since it was declared to have broken out in an epidemic form in the last week of December.

The number of attacks and deaths from the disease has mounted from 64 and 55, recorded in the week ending December 28, to 461 and 348 respectively, recorded in the week ending March, 8.

OF

SMALL-POX

during the week ending March 1, 1941

Get Yourself Vaccinated

The problem is, therefore, causing anxiety to the Health authorities of the city, who are taking all possible precautionary measures to check the spread of the disease. The matter was discussed at an emergent conference of the heads of the departments concerned with the Chief Executive Officer, and it was decided to open at least 100 extra beds at the cost of the Corporation at the Campbell Hospital, the only institution in Calcutta which provides accommodation for Small-Pox cases. To meet the emergency, an extra staff of about 100 vaccinators, an equal number of *bustee*-cleansing inspectors and over two dozen *bustee*-sarkers have been appointed. About 3,000 persons are being inoculated daily in the city.

We take this opportunity of impresing upon our readers the importance of getting vaccinated if they have not already done so without delay. Safety lies in vaccination alone.

CALCUTTA CORPORATION A. R. P. UNIT

The Chief Executive Officer has been pleased to appoint Mr. Saradindu Mitter (License Department) as one of the Deputy Chief Air Raid Wardens of the Corporation Unit.

CALCUTTA CORPORATION EMPLOYEES' ASSOCIATION

Felicitations To Mr. J. C. Mukerjea

The Hony. Secretary (Mr. R. Roy Chowdhury) writes:—

On Saturday, the 1st March, 1941, at a well attended meeting organised by the employees of the Calcutta Corporation at the Central Municipal Office under the Presidency of Councillor Ziauddin Ahmed, the employees of the Corporation expressed their joy at the re-appointment of Mr. J. C. Mukerjea as the Chief Executive Officer for a further term of two years.

The function opened with a song composed and sung by Mr. Rabindra Nath Sen, (Secretary's Department) hailing Mr. Mukerjea a king enthroned in the heart of the employees and rate-payers.

Mr. Radharaman Roy Chowdhury, General Secretary, after having garlanded Mr. Mukerjea offered felicitations to him saying that it would have been a bad day for the Corporation employees if Mr. Mukerjea would have to retire on the 31st March. He regretted that the President of the Association who helped much in getting Mr. Mukerjea appointed, could not be present on this happy occasion as he was hurt by a motor accident. The employess of the Corporation would pray to God for the speedy recovery of Mr. Sudhir Chandra Ray Chaudhuri, their President.

Messrs. J. C. Bose, *ex*-Collector, Sukhen Chatterjee, (Labour Secretary), Haranath Chakrabarty, (Social Secretary) Anath Bandhu Dutta, (*ex*-General Secretary), Jogesh Chandra Banerjea, Subodh Chandra Mitter and Sadananda Ghose spoke highly of the qualities of the head and heart of Mr. J. C. Mukerjea.

The Chief Executive Officer in reply said that in running the administration it had been always his endeavour to treat all classes of employees equally and treat the poorer section sympathetically. He also tempered justice with mercy as he considered that if a man committed a blunder or fault he could be better corrected by warnings than by sustaining material injuries.

He eulogised the activities of the Association which, he said, had been doing immense good to employees.

Mr. Ziauddin Ahmed, the President, in an eloquent speech said that he was glad that the desire of 10,000 labourers had been fulfilled by this significant appointment. He predicted that a day would come when he would see Mr. Mukerjea in a more exalted position.

THE WEEK IN THE CORPORATION

A SHORT RECORD OF THE MORE IMPORTANT DECISIONS OF AND DISCUSSIONS AT THE CORPORATION MEETING FOR THE WEEK ENDING MARCH 7, 1941

THE THIRTY-FOURTH ORDINARY MEETING HELD ON FRIDAY, THE 7TH MARCH, 1941

Entally Workshops

Accepting the recommendation of the Special Committee which had been appointed to enquire into the working of the Entally Workshops the thirty fourth ordinary meeting of the Corporation on Friday decided to re-instate a large number of employees who had become un-employed as a result of the recent scavengers' strike in the city.

The Committee of Enquiry investigated into (*a*) bad management of the Entally Workshops, (*b*) frequent strikes among employees and (*c*) question of taking back the employees dismissed during the scavengers' strike. Altogether 489 men of the Workshops were believed to be on strike, of which 426 were dismissed by the Chief Executive Officer. Since then 191 out of the dismissed hands were reinstated and 86 new men were appointed. The Committee recommended in their *ad interim* report that 86 new men be replaced by the old 86 hands who, according to the Committee, were not at fault.

Government House Assessment

The meeting decided to make a settlement of the appeal preferred by the Province of Bengal in the Calcutta Small Causes Court in respect of reduction of assessment regarding Government House, Calcutta, from Rs. 6,98,526 to Rs. 4,72,776 with effect from the second quarter of 1937-38. The tax of the Government House was fixed at a lump sum of Rs. 94,555 per annum irrespective of occupation of the Government House by the Governor during the Darjeeling and other recesses.

Recruitment Examination

The list of successful candidates for the senior grade and junior grade clerks in the first open competitive examination held under the recent recruitment rules in the Corporation services was approved of by the House for appointment in the vacancies by the appropriate committee.

In the senior grade clerks, 16 came out successful. Of them 10 were non-scheduled Caste Hindus, 5 Moslems and one Scheduled Caste Hindu. In the junior grade, 11 came out successful. Of them 10 were non-scheduled Caste Hindus and 1 Moslem. The vacancies will be allotted as closely as possible in the following proportions: Hindus of all descriptions other than those belonging to the Scheduled Castes—67½ per cent., Scheduled Caste Hindus—5 p.c., Moslem—25 p.c. and other Minority Communities 2½ p.c.

Scientific Advisory Board

The Scientific and Technical Advisory Board, formed at the instance of the Mayor, Mr. A. R. Siddiqi, which would function as a central body with nine sub-committees was approved by the Corporation. The committees are: A sub-committee for the care of the sick, the prevention sub-committee, maternity and child welfare sub-committee, sanitary sub-committee, physical fitness and recreation sub-committee, food and nutrition sub-committee, water supply sub-committee and mosquito control sub-committee.

The function of the Central Board will be to co-ordinate the suggestions and recommendations to be made by the various sub-committees and to frame final proposals for the consideration of the Corporation. The Mayor assured the House that this was a purely Advisory Committee which would not interfere with the administration of the Corporation.

Raja Janakinath

Earlier the House condoled the deaths of Raja Janaki Nath Roy of Bhagyakul and Mr. Kishan Lal Maccar, an uncle of a sitting Councillor. "Raja Janaki Nath," the Mayor said, "was almost an institution in Calcutta and was widely respected."

Calcutta's Budget For 1941-42

As A Ratepayer Sees It

(I)

[By Nripendra Kumar Gupta]

THE Calcutta Corporation's administration covers an area which is by far the biggest of all cities in India. It commands an income which is the envy of Provinces like N. W. F., Assam and Orissa. Apart from a cosmopolitan population which comprises almost all the civilised races found anywhere on the globe, the city is also the biggest port in Hindusthan. It is the largest *entre-pot* of all manners of goods, and its tentacle spread to far-flung trade centres in the upcountry. The Budget of such a city,—which by the way is also the cultural metropolis of India,—cannot but be one of consuming interest.

Education

Our city has budgetted for an expenditure of Rs. 14,68,100 on primary and technical education. The total number of schools directly maintained by the Corporation is expected to be, at the end of March, 1941, 229, besides one Training College for teachers. Seven are Model Schools, 98 Class I type schools, 123 *Bustee* type schools and a morning (part-time) school. It is a pity that the Government of Bengal is prepared to tap many sources of revenue which should morally belong to the city administration, but not to contribute a pice towards the scheme to make primary education compulsory within the limits of the city area. The present Ministers have to humour their mofussil adherents many of whom strangely enough shew a bitter animosity to the city although it is the capital of the province and whenever they attempt to do any justice, these "champions of mofussil" come out with long lectures about the city's insatiable greed inspite of its "handsome" revenues.

Financial Outlook

The city's taxable capacity has been rigidly circumscribed, although the claims on its municipal income from various sources are clamant and increasing with the passage of time. The Government of India appropriate almost two-thirds of the income out of the various taxes imposed within the city area. The Government of Bengal has the next bite, and it is a big mouthful too. A few crumbs are left to the City Fathers to make whatever they can out of them. It is, therefore, no wonder that the Chief Executive Officer in presenting his Budget estimates lays particular stress on this aspect of things.

> "I have for some time past been drawing the attention of the House to the immediate necessity of improving our finances. The principal sources of the income of the Corporation are derived from rates and taxes. Unlike other bodies, we are more or less circumscribed for augmenting on income. With a limited means at our disposal, we have been able to perform as much as could possibly be done, but a modern progressive city cannot now be content with improvements that appeared to suffice in days gone by. New ideas have come within the scope of civic administration which required adequate resources. Unless we have the means, we cannot tackle them".

Growing Expenses

The Corporation has many problems to tackle and all of them will entail heavy expenditure. Water-supply is the biggest one—due to the necessity, at no distant future, of abondoning the Mullickghat Pumping Station. It is expected to cost something like 50 to 60 lakhs of rupees. Then there is the Internal Drainage Scheme, which will still take years to complete. Cossipore-Chitpur and Manicktala will have to be sewered. The capacity of the main pumping stations at Palmer's Bridge and Ballygunge will be taxed more and more. The Outfall Scheme has a much further way to travel before coming to a stop. The time must come when rehousing schemes will have to be taken up in right earnest. City lighting has to be improved. Isolation Hospitals, more Maternity Homes and more Milk-kitchens also remain to be provided. Last but not least is the scheme of compulsory primary education.

Revenues

While there has been a distinct improvement in the collection of the consolidated rates (due in the main to fortuitous circumstances), there have been set-backs in some direction. Proceeds from the sale of water to shipping have suffered due to the war, as a smaller number of ships are coming to the port. The receipts from the License taxes, Markets and Building construction have also suffered considerably. This is due to the abnormal conditions now ruling due to the International situation.

New Works For The Next Year

The Chief Executive Officer is to be congratulated on his departure from the usual practice in inflating the estimates inspite of the fact that normally an expenditure of 9 to 10 lakhs in the year is what is achieved under this head. The total provision of Rs. 9,77,200 is adequate. The provision of Rs. 2½ lakhs for bituminous road surfacing works in the districts and added areas is a wise one, for the saving in annual repairs is considerable.

Loans Budget

The general principle of financing improvements and schemes from loans is that where the work undertaken will benefit not only the existing but also the future generations, it would be paid out of loans. Water supply, drainage, road-widening etc., belong to this category. In the year 1941-42, it is proposed to spend Rs. 7,00,000 on the Moore Scheme and Rs. 8,40,000 for the Main Drainage Scheme—outfall portion. As regards the Internal Drainage Scheme, works of a total value of Rs. 8,59,000 are already in hand and a further Rs. 5,95,265 is proposed to be spent in the Budget year on certain urgent and complimentary projects. Two most important items are (1) the Dhappa Lock Pumping Station costing Rs. 3,48,700 including the cost of a syphon under the Beliaghata Canal and (2) A Sewer ending at one end at Chitpore and at the other end at the Palmer's Bridge Pumping Station along the Canal West [illegible] and Galiff Street. From Halsi Bagan

to Grey Street Extension, this intercepting sewer is 6 ft. in diameter; from Grey Street Extension to Mohanlal Street 8 ft.; and from Mohanlal Street to Chitpore Lock Pumping Station 9 ft. in diameter. The total cost involved is Rs. 6,91,700. This Sewer will help to relieve the Main intercepting Sewer along the Circular Road and thereby to prevent several low-lying northern areas of the city from being flooded during the Monsoon.

The Outfall Scheme

One of the most important works in hand is the Pruss Sedimentation Tanks which are being constructed at Byntala. One of the main causes of the silting up of the Bidyadhari, which used hitherto to receive the city's sewage, was that crude sewage was discharged. These tanks will remove the solid matter. The liquid portion of the sewage, which will be discharged in future, at Kulti will not, it is expected, cause damage to the river. It is to be regretted that the Bidyadhari has refused to wait for the construction of these works and a sum of Rs. 1,82,000 has to be provided at once for the construction of an emergency *Kutcha* channel from Bantola to Kulti.

Some Necessary Urgent Works

I fully endorse the plea of Mr. A. D. Addy for a wooden foot-bridge over the Tolly's Nullah connecting Rash Behari Avenue with Chetla Central Road. The Chetla Bridge has been too long in coming and may be further delayed owing to the war and the paucity and high cost of materials. Another improvement which should no longer be kept in abeyance is the widening of Chandra Mondal Lane in Ward 27. It is an important thoroughfare carrying heavy traffic but is too narrow for the purpose. To have it widened to 40 ft., kerbed and channelled and sewered, end to end, is not likely to cost more than half-a-lakh, as it traverses several *bustees* which may be acquired without difficulty. I would also plead for some special attention being paid to the Tollygunge area bounded on the South by the Budge Budge Railway and on the North by the Tollygunge Circular Road, on the East by the Russa Road and on the West by the Tolly's Nullah. It is in a deplorably insanitary condition.

THE BENGAL PREMIER AND THE CENSUS

Protest Against Recent Utterances

A largely attended and representative meeting of Hindus was held at the Town Hall, Calcutta, on Thursday afternoon (March 6) to express "indignation and dissatisfaction over the recent utterances of Mr. A. K. Faslul Huq, the Chief Minister of Bengal, on the Hindus of Bengal" in connection with census operations. Sir Nripendra Nath Sircar presided.

Sir Nripendra Nath, after stating that Mr. Faslul Huq's recent utterances contained "unbridled vilification and condemnation of the Bengal Hindus generally," placed before the meeting a letter that he had received from Mr. Huq only a few minutes before the meeting.

In that letter, Mr. Huq after stating that he had been misunderstood, invited the leaders of all communities to sit at a conference and devise ways and means to improve the present political situation in the province.

Sir Nripendra suggested that due weight and consideration should be given the letter and nothing should be left untried to bring about a peaceful atmosphere.

Sir Nripendra said that they were for the moment concerned only with Mr. Faslul Huq—and nobody else. Whether irregularities had been committed in connexion with the census by either party, or both, or none, were matters for which there was proper machinery for investigation and for dealing with offenders. Mr. Huq had made no fewer than nine statements on the subject and he quoted from a statement made by Mr. Huq on March 2, as follows :—

> "What else could happen when lawyers, scientists, professors, lecturers, landlords, merchants, Brahmins and non-Brahmins and all the medley castes and sub-castes have combined to tell lies and make false statements in order to inflate their figures".

Sir Nripendra commenting on this said : "If language has to be taken in its ordinary significance, in the context in which it appears, there cannot be any doubt that all Hindus who have any connection with the census are being tarred with the same brush.

"When I read this statement I wondered whether any responsible public man could have been guilty of such a public statement of this kind. But my wonder increased when I read the sentence immediately following, namely :—

> "What better can I expect when I find men who have spent their whole life in the teaching of youth making false statements without the slightest qualm of conscience and indulging in the orgy of chicanery, perjury and falsehood, in order to deflate the Moslem position?"

Sir Nripendra quoted the following further passage : "If dishonesty succeeds in Bengal, as it has often succeeded in the past, and a mockery of figures is put forth as the census of the population, I will decide definitely in favour of Pakistan," and pointed out that "in spite of Hindu claims of deliberate Moslem inflation no responsible Hindu has accused the entire Moslem community or their lawyers, scientists, professors, lecturers, landlords and merchants of having lost all honesty or that they indulged in an orgy of chicanery, perjury and falsehood." He advised the Hindus not to imitate Mr. Faslul Huq and vilify the entire Moslem Community as, apart from all other considerations such attacks would be unjust and improper. If the activities of Mr. Huq had been carried on as a private individual not holding the high office of the Chief Minister of Bengal the mischief would have been very much less.

Mr. Huq Explains His Attitude

Mr. A. K. Faslul Huq, in the course of a statement issued on Thursday night said :—

"I find that the letter which I wrote to Sir N. N. Sircar this (Thursday) afternoon and which he read out to the meeting at the Town Hall has been misunderstood in some quarters. I wish to make it perfectly clear that it does not in the slightest degree alter the stand I have taken up with regard to the census nor does it mean that I propose to abandon the fight I have undertaken, so far practically single-handed, to defend Moslem interests against the conspiracy of a very large section of communal-minded Hindus who are bent on reducing the Moslem majority in Bengal even to the extent of making them a minority and who have, according to clear and overwhelming evidence in my possession, considered no tactics too unworthy to adopt in order to secure their object."

General Article

Local Bodies And Public Utility Services

[By K. Jayaraman]

IT is truism that local bodies in India have been cramped by lack of funds in carrying out a progressive policy of civic improvement, while the demands made upon them have been ever increasing. The position has been summed up well by the Bombay Local Self-Government Committee (1939) as follows :—

> The admittedly low taxable capacity of the mass of the people is subjected to a heavy strain by central taxes, both direct and indirect, and affords a narrow margin for the Provincial Government and the Local Bodies to draw upon. The financial position of the latter, as subordinate authorities, is extremely difficult.

The War has rendered matters still worse and put a stop to financial assistance from Government (either in the form of grants-in-aid or loans). Thus the central problem of local finance is one of developing the resources of local authorities.

I

THERE is a view, widely prevalent, that Public Utilities, like Electricity and Transport Services, if owned by local authorities, would finance their activities to a considerable extent and thereby mitigate the burden of rates. At present, in the Madras Presidency, there are about 30 Municipalities and half a dozen Panchayat Boards which own and manage Electric Utility concerns, and some of them have even reached the profit-earning stage. For example, the Madura Municipality (the second biggest in the Presidency) is earning a net profit of over a lakh of rupees annually from its electric utility undertaking. In the words of Madura Municipal Report for 1936-37 :—

> The electrical undertaking has been an unqualified success. The large profits earned during the last nine years have enabled this municipality to meet the various obligations of the other spending departments and have gone a long way in reducing the burden on the tax-payer.

But there are obvious misconceptions in this view. The underlying object of public ownership of utility concerns is not profit but efficient and good service. Taking England as a whole, the Public Utility Services are run at a loss, though individual cities might be making handsome profits. But normally, the profits in these cities do not go to abate rates but to improve the various specific services which earn the profits and to provide more comforts and ultimately to reduce charges. It is quite unusual to divert the profits towards rates, and it would be inequitable to adopt this basis. If large profits are made in the supply of, say, electricity, the relief must evidently go to the consumers and not to the general rate-payers. Indirect benefits in reduced charges will, however, accrue to the majority of rate-payers, but the incidents of the rates must remain unaltered. Only such of the rate-payers as utilize any specific service should benefit, to the extent of the use, from the reduced charge. On this point, the Balfour Committee in England spoke in clear terms as follows :—

> The opposing policy is that which regards such undertakings as services to be administered in the best interests of the community as a whole, profit-making being a subsidiary consideration to that of giving the best possible service at the lowest cost compatible with the avoidance of financial loss and thereby securing the largest possible utilization of the service by the public. The trend of recent legislation (in England) has been towards the assertion of the latter principle.

In ignorance of the position in England and of the fundamental principle underlying Public Utility Management, time and again a clamour is raised in this country that, if the Utility Services were owned by local authorities, considerable improvement could be effected in local administration. This attitude is indefensible in any case. On the basis of present standards, (even if the services are not well run and charges are excessive under private ownership), it is extremely doubtful if the alternative to private ownership is only municipal ownership, and we wonder if our local authorities, steeped as many of them are in poverty, can attain either the organisation or financial results necessary for efficient and economical administration. The issue is not one of type of ownership (private *vs.* municipal) but of efficiency. As a recent writer has well said, 'the type of ownership is secondary; community advancement is fundamental.' And in so far as the fundamental object of Public Utility Management is community advancement over the whole country, and not parochial or sectional development, it is essential that these services should be administered by a body of experts competent to manage them.

Even apart from the relatively academical question as to the propriety of local bodies organizing and managing Public Utility Concerns, we feel, with the Bombay Local Self-Government Committee (1939), that not many local bodies will be found capable of running important Utility Concerns. As a further proof of this fact, we have only to quote the Chief Engineer for Electricity to the Government of Madras: 'Experience in this Presidency during the past few years', said he before the Madras Electricity Board Committee, (1935-36), has led me to the conclusion that Municipal Councils in this Province at present find it difficult to manage and direct local electrical undertakings in a manner which will ensure healthy electrical development and a maximum of benefit to the community. Even the most efficient Councils leave much to be desired in that respect.' Experience has shown that an administrative body like the

Municipal Corporation, which has to satisfy varied interests, cannot function as efficiently as a business body can. The fact that local bodies are purely lay bodies, often with poor financial resources and business experience, is reflected in the general inefficiency of such undertakings. Government have sought to improve matters, but fundamental defects are difficult to remedy.

These public utility undertakings have, all of them, one feature in common: namely, that the capital invested in them will take some time before it yields returns, and therefore the ordinary methods of financing are not suitable. In Madras, the recent hydro-electric and power supply schemes have all been financed by Government, but the financing machinery is ill-organised. The big generating stations are all owned and managed by Government, while the distribution of power is conducted by the threefold agency of Government, local bodies and private companies. Some municipal and private undertakings finance their schemes, but they often go to Government for loans and undergo various processes and formalities before funds can be obtained. This means delay; in the meanwhile, the concerns lose all interest in the business and some even break away. Government is very, very slow-moving and reluctant in rendering financial help to private and municipal undertakings; they attach more importance to the financial stability of the managing authority than of the schemes. Thus, in many cases, the electrical undertakings managed by local authorities and private companies failed to develop their areas properly, as they labour both under inadequate finance and lack of proper technical staff. The policy of Government has been to manage municipal electrical undertakings themselves until the profit-earning stage is reached, so as to achieve uniformity and efficiency. But this procedure is found to involve great difficulties both to Government and municipalities.

These utility concerns, it should be noted, afford a valuable means of drawing capital from the investors. The starting of Public Industrial Corporations for financing all semi-monopolistic industries is not only desirable but necessary if financing is to be done efficiently. The 'foreign experts' who came to assist the Indian Central Banking Enquiry Committee had already recommended the constitution of some such Public Corporation whose field of operation must be the pioneer enterprise of a non-competitive character, such as the development of mineral resources, large public utilities such as electric power schemes, gas works, etc., but no steps have been taken in the direction so far. The capital required is so large and the intervening period between the beginning of the scheme and its profit-earning stage is so long that special assistance will be required.

PLASSEY CANNON FOR CALCUTTA UNIVERSITY

A cannon believed to be of the 18th Century, has been discovered by Mr. Manoranjan Choudhury, in Plassey village Murshidabad district. It is believed that the cannon was used by Nawab Seerajudowllah's army in the Battle at Plassey. The cannon has been presented to the Ashutosh Museum, Calcutta University.

II

THE policy of the Madras Government, in regard to electricity, has been to entrust the distribution of power to local authorities in preference to private companies. But to-day there are more private licensees in the Presidency than local body undertakings, 40 against 34. It is only in areas where no one is forthcoming to take a license that Government would undertake distribution themselves. This policy has in practice been found to result in stagnation and frustration of the main objective, which is to make available cheap and abundant power over countryside. Electricity is a primary commodity and must be available to the poorest of our peasants at the cheapest possible rate. It must be consistent not merely with economy but safety and efficiency. National income and with it the standard of living can increase only when the out-turn of work is increased, and this is possible only with the aid of mechanical power. Electricity is the only feasible means of transmitting to the rural areas a supply of sufficient power. Being a very mobile form of power, its offer means to decentralise power and therefore industry, since 'the new possibilities of electric-transmission of power have made possible the use of machinery in localities not supplied with coal or oil.

The local body licensees in the Presidency are all Municipalities except a few *Panchayats*, and even these are suburban. Their load is chiefly lighting, industrial and agricultural demand being very small. So far as private licensees are concerned, they tend to concentrate on the development of immediately paying load. Their shareholders are not philanthropists and they are not concerned with electricity as a means of developing production or raising the standard of living, except in so far as it is reflected in the balance sheet. Development is, therefore, confined to areas where consumer-density per mile is large. In fact, with the possible exception of two or three companies which have a considerable mileage of rural lines, the record of private licensees in the Madras Presidency is very poor indeed. They have developed only the immediately profitable urban areas.

Although local body licensees are in much more advantageous position than private companies, inasmuch as the period of their supply is not limited and they reap indirect advantages in the raising of the general standard of living, they suffer from all the disabilities attached to private companies. Municipal Trading outside the municipal limits is a doubtful policy, especially for commercial undertakings which will not show returns in the early stages. Even otherwise, local needs must take precedence, and so the tendency has been to confine to the territorial limit, although several municipalities in progressive countries have been permitted to go outside their areas to supply electricity, some of which have produced magnificent results. The problem of bringing power supply into the rural areas at a price which would compare favourably with that prevailing under existing conditions is one of primary importance from a national point of view. But, as yet, no District Board has applied for or obtained any license, excepting, as we said, some few *Panchayats*. Rural distribution of power has, therefore, fallen mainly on Government, and even they, handicapped

as they are by the liabilities attached to departmental management, have not succeeded in extending power supply on a uniform basis throughout the province. Progress is confined only to a few districts such as Coimbatore and Trichinopoly, in spite of the inducements offered by the Government Electricity Department, such as the institution of a Conversion fund from which advances are granted to agriculturists and small rural industries for the supply of electric plant and equipment on the hire-purchase system.

To sum up the position so far, the electrical development in Madras has hitherto followed the time-honoured method of progressive development. The present arrangement for the generation and distribution of power under the three fold-agency of Government, local bodies and private licensees grew up inevitably as there was no formulated scheme of development and as there was no demand for large scale licences except in a few centres which promised a good load. Government naturally granted licences for limited areas with limited scope. This procedure, which was inevitable at the beginning, has resulted in individual and independent undertakings cropping up, each pursuing, in the words of Sir Henry Howard (the former Chief Engineer for Electricity to the Government of Madras), 'uncoordinated and unrelated policy.' Small stations are installed if and when load conditions attract private capital or local bodies' enthusiasm. The principal load is domestic lighting (a comparatively luxury supply, with a large margin of profit), leaning to the electrification of the more densly populated municipal or local government areas. This placed the rural areas in a particularly disadvantageous position and their electrification now raises questions of capital expenditure on what might appear 'unremunerative' schemes and of 'burdens' placed upon urban areas. 'Had a planner system of electrical development and management been started ten years ago,' lamented the Chief Engineer for Electricity before the Madras Electricity Board Committee, 'this system of uncoordinated electricity development by means of scattered licensed areas selected in a rather haphazard manner, mainly to conform to local conditions and private interests to the detriment of national interests, would have been avoided.' There is at present an imperative necessity for a national and unified system of power supply. The scope in this respect is great in this country because of the diversity in regard to stations as well as to loads. In certain areas, hydro-electric power is cheaply generated (i.e., Pykara and Mettur) while others are better suited for efficient thermal stations (*e.g.*, Bezwada and Vizagapatam). Load factor also varies from area to area. Demand fluctuates with season as do conditions of generation. Thus the scope for interchange of power is great, and this is only possible within the areas of the large generating stations. By planner development it will be possible to send the power to the lesser towns and villages. Hence the need of insisting on standardization of frequency and other technical conditions, which must be fulfilled if interconnection on a reasonable cost is to be effected. These facts make national policy and its steady enforcement imperative, and inasmuch as the Indian Electricity Act of 1910 does not give Government sufficient power to deal adequately with the matter, either that Act must be amended or a new Act must be passed setting up a new authority to achieve co-ordination and unified control.

Indeed, it is undesirable for Government to manage an obviously business concern like that of the electric industry (which requires quick decisions and quick action), since they are handicapped by their cumbersome procedure and codes and methods of departmental administration. A commercial department like the Government Electricity Department, supplying a vital and highly competitive commodity like electric power for industries and lighting, is in many ways different from other public departments, and direct control by Government itself with its inevitable restrictions and regulations is unsatisfactory in many respects, particularly where quick commmercial decisions are required. In order, therefore, to safeguard the future interests of the Provincial Government in the electrical undertakings and to ensure a healthy and rapid development of electric power in the province, the Chief Engineer for Electricity to the Madras Government has, for some years past, been advocating the formation of an Electricity Board to control power development in the Presidency. It is a pity that the Committee, appointed by the Madras Government for examining the proposal in 1985-86, did not see its way to recommend the creation of such a Board, although the arguments adduced by them against the Board were by no means convincing. In fact, subsequent experience has only pointed to the imperative need for such a financing and controlling authority, and the only solution of the problems of the electrical industry in the Presidency seems to lie in the early formation of an Electricity Board so as to direct the generation and especially distribution of power on a uniform basis over the province, urban as well as rural.

(To be concluded)

CALCUTTA ROTARY CLUB

Annual Meeting

The annual meeting of the Rotary Club of Calcutta was held at the Great Eastern Hotel on Tuesday afternoon. Mr. A. Austin, the newly elected President of the Club, was in the chair. The Club's guests were Sir Thomas Lamb, Mr. and Mrs. Biren Mookerjee, Mr. W. C. Wordsworth and Colonel and Mrs. N. Barwell.

After lunch, the President proposed the toast of "The King Emperor" and then "Rotary International coupled with the President of the U. S. A." Mr. E. W. Holland, I.C.S., gave the toast of "The Ladies" and Colonel A. C. Chatterjee, I.M.S., "Our Guests," to which Sir Thomas Lamb replied. Rai Bahadur P. N. Mukerji proposed "The Rotary Movement, the President and the Incoming Officers" and the President gave "The Retiring President and his Officers."

The office-bearers for the current year are:—President—Mr. A. Austin; Vice-President—Colonel A. C. Chatterjee, I.M.S.; Hony. Secretary—Mr. W. Buchan; Hony. Treasurer—Mr. W. J. Savage; Immediate Past President—Rai Bahadur P. N. Mukerji; Directors—Messrs. B. Matthews, E. W. Hollan, I.C.S., D. G. Bell, S. K. Mitra, Khan Bahadur G. A. Dossani, N. C. Laharry, C. A. Newbery and Rai Bahadur N. C. Ghosh; Sergeant-at-Arms—Mr. J. C. Warren Boulton.

Do These To Avoid Cancer

By
DR. MORRIS FISHBEIN
EDITOR
"Journal Of The American Medical Association"
AND OF
"Hygiea": The Health Magazine

THE American Society for the Control of Cancer is spending a good deal of money and effort in order to inform people concerning fundamental facts regarding this condition. Recenty the Society has issued pamphlets called "Cancer Facts for Men" and "Cancer Facts for Women", which anyone may secure by writing directly to the Society at 350, Madison Avenue, New York City, and enclosing a self-addressed stamped envelope.

It is pointed out that cancer deaths occur in mostly from cancer in the stomach and intestines, and in women from cancer in the tissues associated particularly with women's functions. After the stomach and intestines, the next most frequent spot for cancer in men is in the prostate gland, then the rectum, the lungs, throat, the mouth and tongue.

In men of middle age or over who have not had symptoms and who suddenly develop constant discomfort or distress associated with these parts of body, an early consultation with the doctor is necessary to rule out the beginning of a cancer. Delay is always dangerous because cancers grow and spread rapidly. In their early stages they are limited to one spot. After cancer has spread, elimination is much more difficult.

Six simple helps to decrease the risk of a formation of cancer. They are:—

1. Keep the mouth, tongue and throat clean.
2. Keep the teeth clean and free from cavities and jagged edges that chafe the tongue or cheek.
3. Avoid the excessive use of tobacco, especially if it irritates or burns the tongue, lip or cheek.
4. Avoid the use of food or drink that irritates the stomach or that causes irregularity in action of the intestines (bowels).
5. Keep the skin clean.
6. Have regular physical examinations by a recognised physician to act as a "check up" at least once a year. Form this habit and stick to it.

In the case of women, these two possible warning symptoms should be constantly kept in mind:—

1. A lump in the breast or a bleeding, scaling nipple.
2. Irregular bleeding or discharge from the uterus (womb).

Incidentally, in women certain types of irritation associated with childbirth may be avoided if the woman will remember to nurse the baby, unless the doctor advises against it, and to see the doctor six weeks after the birth of the child to make certain that any injuries to the tissues are suitably repaired. A complete physical examination at least once every six months, particularly for the woman past 40 years of age, is her best insurance against cancer.

Now-a-days surgery, X-ray and radium, alone or in combination, are known to be useful in the treatment of cancer and also known to be capable of eliminating and stopping the growth in a tremendous number of cases.—*Copyright.*

LATEST IN MEDICINE

THE father of modern medical science, Hippocrates expressed the opinion that epilepsy is a disease that occurs in families. Since that time the subject has been constantly debated. One investigator accumulated the family histories of 2,130 patients with epilepsy and studied the occurrence of the disease among 13,262 near relatives. He found that seizures occured in 2·4 per cent. of these people, which gives an incidence approximately five times among people whose families had no record of epilepsy. This evidence would seem to indicate that the tendency to epilepsy is greater in families where such attacks have occurred than in families where there is no record of epileptic convulsions.

In recent years scientists have developed a machine known as the electro-encephalograph which traces electrical changes that take place in

the brain. Such tracings were made of the parents, the brothers and sisters and the children of 94 patients who had epilepsy.

Definitely abnormal records were obtained in 60 per cent. of the relatives of these patients and in only 10 per cent. of the controlled group of 100 people who did not have a near relative with epilepsy. To the investigators, this indicates that the unusual rhythmical discharges of epilepsy are inheritable and indicate a predisposition to epilepsy or some allied disorder.

Obviously people with unusual discharges of the epileptic type should be careful about marrying other people with similar disturbances because this would increase the chance of an epileptic discendant.

* * * *

FOR pneumonia, modern medicine now has available anti-serums and drugs from the sulfanilamide group. Investigators now report that the use of the serums in addition to the drugs is particularly valuable in patients over 40 years of age and especially valuable when it is desired to reduce fever promptly. The mortality rate was one-third higher among those who received the drugs alone than among those who received the combined drugs and serum.

AMONG the extraordinary records in medical science is the report just made available of a case in which the stem from a cherry got into the tube that leads from the gallbladder to the intestines and blocked it. When the stem got into the tube, salts began to form around it so that eventually the patient had a gallstone which blocked the flow of bile from the gallbladder. An operation had to be done. When the stone was removed, the cherry stem was found at its centre.

* * * *

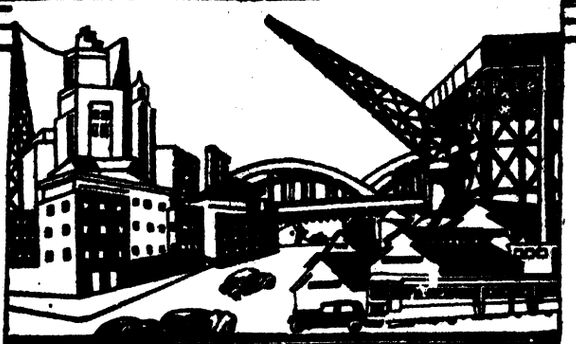
SO much has been said about the healthful effects of vitamins that investigators have recently studied the effect of adding extra excess of vitamins A, C, D and B to the average diet of half the children in an institution. The remaining half were left without any extra vitamins.

Of the 51 children who had influenza during the year, 26 were receiving extra vitamins and 25 were not receiving the vitamins. The evidence in this study, which continued over a year, showed that the addition of large doses of Vitamins A, B, C and D to an ordinary well-balanced diet was apparently ineffective in reducing the incidence of coughs, colds or influenza.—*Copyright.*

Development Of Bacteriology

The Part India Has Played

THE important part that India has played in the development of the science of bacteriology was referred to by Major C. L. Pasricha, I.M.S., Professor of Bacteriology and Pathology, School of Tropical Medicine, Calcutta, in a paper: "A Note on the History of Bacteriology and some of the early workers in India" read by him at an ordinary monthly meeting of the Royal Asiatic Society of Bengal on Monday.



Major Pasricha said that of the 330 early workers in bacteriology, 17 came to India. These were Henry Vandyke Carter (British), I.M.S.; David Douglas Cuningham (British), I.M.S.: Stewart Ranken Douglas (British), I.M.S., Bernhard Fischer (German), member, Cholera Commission to India, 1888, George Gaffky (German), member, Cholera Commission to India; Waldemar Mordecai Wolff Haffkine (Ukranian), Cholera and Plague Expert and Founder of the Haffkine Institute, Bombay; Ernest Hanbury Hankin, (British) Chemical Examiner and Bacteriologist, United Provinces and Central Provinces; Felix Hubert d'Herelle (Canadian), Cholera and Dysentery Specialist; Robert Koch (German), Head of the German Plague Commission to India, 1896; George Lamb (British), I.M.S.; William Boog Leishman (British), R.A.M.C.; Timothy Richards Lewis (British), Army Medical Service; Alessandro Lusting (Italian), Authority on Plague; Charles James Martin (British), member, Plague Advisory Committee; Richard Pfeiffer (German), member, German Plague Commission in India; Sydney Donville Rowland (British), member. Advisory Committee for Plague Investigation in India; and Almroth Edward Wright (British), member, Indian Plague Commission.

Work Bearing Fruit

"Each one of them," Major Pasricha said, "has left an indelible mark upon the annals of research and discovery in relation to infectious diseases of man and animals. The work done by these pioneer workers has borne, is bearing and will bear much fruit. To take but one instance it was Koch's discovery of the cholera vibrio and the pioneer work of Wright and Leishman with typhoid vaccine that led to the subsequent large-scale trials, under controlled conditions of cholera vaccine, by Haffkine. These experiments contributed in no small measures to the establishment of the value of vaccines as prophylactic agents in the controlling of large epidemic diseases. If it were possible to reckon up the sum of human lives that have been saved from premature death by this procedure alone the total would attain gigantic proportions

"India has played an important role in two ways, firstly, the presence of epidemic diseases, and, secondly, the facilities for large-scale trials under controlled conditions and with reasonable facilities for collecting *data*. The fact that of the 330 early workers who have found place in Bulloch's History of Bacteriology, 17 workers came to India is sufficient justification for India to feel proud of the facilities that she has been able to offer these workers and thus to the development of the science of bacteriology." For her part India and her present-day workers should ever keep these men in grateful memory."

The Architect And Architecture In India

[By Raja Ram B.Sc., A.M.Inst.C.E., M.Inst.Mun. & Cy.E., F. R. S. I., etc.,
Sometime Principal, Thomason College of Civil Engineering, Roorkee & Late Malarial Engineer, Malaria Survey of India]

THE function of an architect is to build simply and well to provide necessary accommodation, strength, durability, hygienic arrangements, and last but not the least important of all-delight, in his projects and execution of buildings, under difficult and complex conditions.

The primary details of his work include amongst other things, walls, floors, roofs, pillars, doors, and windows and their transformations and accessories uch as arches, domes, vaults, columns or shaped pillars, staircases, flues, fireplaces etc., etc.

Architect's Tradition

Into the study and practice of architecture enter preservation of knowledge and its advancement, and therefore, if any architect ignores what has been done in the past he falls into the danger of wasting his time—in solving problems—both structural and artistic—which have been already solved, for great minds have built before our time.

Consciously or unconsciously an architect can not help carrying on a tradition, which is materialised reasoning that may or may not be logical at his time, but he can carry it intelligently or unintelligently.

Architect's Education And Training

Before admitting a student to a course of study and training in achitecture it is necessary to test him or her for fitness to profit by the instruction, for every one is not inherently suited for such training. Usually one must look for the most suitable material amongst people who have for generations been carrying on the profession of artistic stone workers, *Shilpakars*, draughtsmen in places like Agra, Jaipur, et., etc., where the great administrators in times gone by had continuously patronised them generation after generation. But this does not mean that others without keen intellect, artistic gifts and aptitudes though without any hereditary tradition cannot profit by such training and ultimately rise to the top.

Suitable primary and secondary education, early initiation into drawing, preparation of drawings by measurement of classic details of old Masterpieces are necessary prelude to entering the profession of architects.

A five years' course of study at a regular school or apprenticeship under a master, followed by at least two years' work on construction and projects would make one a fairly suitable architect's assistant.

If the young assistant has any ambitions to attain heights in his or her profession the study will have to continue throughout life. Further study must comprise architectural tradition, scientific developments, religious, political and social trends.

Although there are a few schools of architecture in India one must admit with regret that there is not single school of Indian architecture which can stand comparison with some of the best ones in foreign lands. The great wealth of architectural tradition in the country has been deliberately allowed to regress evidently by considerations of the Imperial policy.

Theory Of Architecture

For a proper study of architecture the first step is a study of theory which provides the necessary link between knowledge and the activity of design. Theory is the first act of simplification, "it is the planning of planning".

A student cannot make a simple design without having first drawn upon some source and linked and arranged a number of confused elements in his mind on some kind of a system. That system is likely to be compounded of borrowings from others plus or minus his native intelligence; however, all this implies criticism or discrimination, a picture of relative factors, recognition of evident primary chaos in his mind, and its subsequent reduction to the orderly form of a design. Theory is the framework of his whole thought; it is the wealth of knowledge coupled with criticism which an architect can bring to bear on his job. Upon theory unconsciously depends the architect's standard and his future direction of development. Architecture in a narrow sense is the most hunted of the arts, and at the highest it is the most inclusive.

Architectural Values

The architectural value of a building or a series of buildings is assessed by the satisfaction both material and artistic, it continues to give over a series of generations. Past is full of buildings that have been and are still being tested by this process, and the testing process may be termed Architectural History.

One might ask if the famous masterpieces of architecture in India still continue to give satisfaction to the modern generation of architects. It is doubtful whether fully and properly trained Indian architects of to-day will have the courage to admit that given the freedom and choice they would not care to build another Taj Mahal or the Madura temples or the Victoria Memorial. It cannot be denied, however, that there are numerous men and women in India of great culture and attainments who while admitting some merit of the highest order in the buildings referred to above fail to find satisfaction in their design and execution.

Taste In Architecture

Study and practice of architecture entails first the critical analysis and subsequently the discriminate synthesis of personal visions of individual architectects who in the past selected their own forms, in short of "race" imagination" experienced by men of average creative ability in a particular epoch or epochs.

Public taste is the basis of a practising architect's designs, but this does not imply that he should blindly cater for it. *As a specialist he must direct, adapt, and refine and improve it.*

Good taste is the expression of a real desire for quality in life and its forms, and often exists under natural conditions and freedom, amongst people, without any conscious effort after its "culture."

Unfortunately for India the imposition of the present system of Government by an alien race has temporarily tampered with and deformed the steps in the continuity of its natural tradition, and induced an almost pathological lesion in its life history. Time alone can restore its proper position in the culture of its people.

BENGAL BOMBAY AND MADRAS TELEPHONES

Government Offer To Buy Concerns

A formal offer to purchase, at a cost of Rs. 475 lakhs, the Bengal, Bombay and Madras Telephone Companies has been made by Sir Gurunath Bewoor, Chairman, Board of Directors of the Government Telephone Board Ltd.

Four months are allowed to shareholders of the companies to accept the offer but expectations are that the consent of 75 per cent. of the shareholders would be forthcoming without much delay.

Fifty-one per cent of the shares are held by the Oriental Telephone Company, London, and large blocks of shares are held by certain interests, all of whom are expected to send in their consent expeditiously to enable the deal to be closed.

Three telephone companies will then be taken over by the Government Telephone Board and as a result Government telephone exchanges in Calcutta and Bombay will render service only to officers of Posts and Telegraph Department. While control will change there will be no change either in staff of the companies or in their system of operation and of charges. The reason for this is that the Government Board must earn normal dividends to compensate itself for the dividends to be paid in advance to shareholders of the existing companies up to 1943.

There is no intention of setting up local boards in Bombay, Calcutta and Madras, and as far as possible large powers enjoyed by the executive staff of the companies will be maintained so that the State ownership may not interfere with the initiative of the executive heads. At the end of 1943 when the license of the three companies expires, the Telephone Board will be liquidated and the Posts and Telegraph Department will take over the entire organization.

SURGICAL INSTRUMENT INDUSTRY

Lieut.-Genl., G. G. Jolly, Director-General, Indian Medical Service, met representatives of the surgical instrument industry in India at an informal conference held on February 17, 1941 says a Press Note.

The occasion was the first at which representatives of the industry from all centres in India met to discuss their common problems. The factors affecting the war-time production of surgical instruments in India were fully considered and closer liaison between buyers and suppliers was explored with the object of removing many of the difficulties now encountered by the industry in meeting the present heavy demands of the Medical Stores Department.

CALCUTTA NEWS & VIEWS A Digest

CALCUTTA—DACCA TELEPHONE

It is understood that it has been decided to improve telephone communication between Calcutta and Dacca by providing a second telephone circuit between the two places.

PROTEST AGAINST THE SALES TAX BILL

Many Indian shops in Calcutta were closed on Tuesday, the 4th March, as a mark of protest against the Sales Tax Bill now under consideration by the Bengal Legislative Assembly.

A meeting under the presidentship of Mrs. Hemaprova Mazumdar, M.L.A., was held in the Town Hall in the afternoon when a resolution was passed protesting against the Bill and urging the Government to withdraw it.

Should the Bill be passed, the meeting urged upon all sections of businessmen and traders of the province to observe a complete and continuous *hartal* until the measure was repealed.

AIR RAID SIGNALS

The following Press Note has been issued by the Director of Public Information, Bengal:—

"In supersession of the Press Note of July 26, 1940, relating to air-raid warnings it is notified for general information that the following air-raid signals will be sounded in Calcutta and the neighbouring industrial area and Chittagong town and port to warn the public of the approach of hostile air-craft and to inform them when danger is past:—

General alarm system to be sounded by sirens and hooters.	*Local alarm system to be sounded by whistles etc. by wardens, sentries, etc., within sub-areas.*
Air raid warning:—	
A signal of two minutes' duration consisting of a fluctuating or 'warbling' signals of varying pitch in which the frequency range is not less than 10 per cent above and below the mean pitch, the complete cycle of each fluctuation to extend over a period of about 3 to 8 seconds.	**A succession of short blasts on the whistle. Since the signal may often be inaudible a visual signal also will be used, *viz.*, both arms raised above the head and the hands waved.**
or	
A succession of intermittent blasts of about 5 seconds' duration separated by a silent period of about 3 seconds.	
Raiders passed or air attack over:—	
A continuous signal of two minutes' duration at a steady pitch.	**Two long blasts on the whistle repeated at intervals of 5 seconds.**
All Clear:—	**Handbells will be rung.**

BENGAL LEGISLATIVE ASSEMBLY

The members of the Bengal Legislative Assembly owing allegiance to the All-India Congress Parliamentary Sub-Committee have withdrawn from the Assembly.

Announcing their decision at the Legislative Assembly on Monday, Mr. Kiran Sankar Roy, the Leader of the Group, explained the reasons which led to the decision by the All-Indian Congress to withdraw from Parliamentary work and begin direct action.

"Though they had decided to withdraw from the Houses, "Mr. Roy concluded, "whenever the present Government brings forward measures to trample on the fundamental interests of this province, those of us who will remain outside prison will come here to record our opposition."

THE "BLACK-OUT"

Calcutta went through her first all-night black-out on Monday and early morning with a degree of success that, judging from the fact that it is the city's first attempt at such a thing, must be admitted as remarkably thorough.

The instructions included extinguishing of all road and external lights, controlling lights inside premises so that no light would be visible from out-side or above the premises, screening all lights of all vehicles on roads as also all external lights on vessels in inland waters and controlling of all commercial furnaces, jetties and dock lights, shipping and navigation lights on ships in ports. The Railways and Port Commissioners enforced their lighting restriction schemes under the direct supervision of Mr. N. V. H. Symons, A. R. P. Controller.

The entire Howrah Bridge was completely under darkness and the traffic along the bridge continued as usual with muffled lamps while hackney carriages and private *gharries* proceeded along the bridge without lights. The traffic police managed the crowd and the vehicular traffic along the bridge in perfect order.

According to the direction all lights at the Howrah Station were subdued and covered up with screens and the passengers were conducted to the platforms by the station staff with covered lanterns. Trains departed from and arrived at the station under black-out conditions as far as possible. No search lights were exhibited.

Similar arrangements were also made at the Sealdah Station. The lights in the railway yard beyond Sealdah were, however, kept on.

It was clear that more was necessary in the way of screening windows and particularly fan lights to achieve a greater degree of obscurity than many people had achieved remarked Mr. N. V. Simons, A. R. P. Controller, Bengal, in an interview to the *Associated Press*, after he had flown over blacked-out Calcutta and its suburbs for nearly two hours.

The public of Calcutta had once again willingly co-operated and this was confirmed by Mr. Symons in what he had seen while driving back through the streets of Calcutta. "It was an exception to see a light in a house

which was not shaded and people had obviously taken pains to do their best" he proceeded "but it is clear that more is necessary in the way of screening windows and particularly fan lights to achieve a greater degree of obscurity than many people achieved. Many people seemed to think that it was sufficient to cover the bulbs of their electric lights with brown or coloured paper and then leave the windows wide open. This achieves what is known as partial obscurity and while it is of great value in preventing a glare, which is visible many miles away, it is inadequate for a real black-out with raiders overhead. Those who have done only this much on the present occasion should go further and make sure that they have one room at any rate in which they can have a light at night and no trace of which will be visible from outside. If they do not do this, they will either have to remain in darkness during an air-raid or else they will disclose the fact that there are occupied houses with the result that bombs are practically certain to be dropped on them.

RAJABAZAR-SHAMBAZAR TRAM LINE OPENED

The Calcutta Tramway Company's new extension from Rajabazar to Shambazar junction was opened to traffic on Sunday last.

At first the tramway authorities intended to arrange for a formal opening ceremony but subsequently the idea was abandoned in view of the war and it was decided to donate the money which would have been spent on such a function, towards some beneficient object.

It is understood that in consonance with this decision a substantial sum has been given to the Jadabpur Tuberculosis Hospital.

In addition to the Rajabazar-Shambazar link, the Tramway Company are at present planning two other extensions—one from Moulali Corner *via* the new Improvement Trust Road in Entally and Gorachand Road, to Park Circus, and the other from Park Circus along Gariahat Road to Rashbehary Avenue.

When these are completed, the tramway system will almost make a complete circuit of Calcutta.

CORPORATION JAMADARS', PEONS AND WORKERS' ASSOCIATION

Ask For Dearness Allowance

A meeting of the Association was held under the Presidentship of Mr. M. M. Burman on the 23rd February, 1941, in Wellington Square, when the following resolution were adopted :—

"This meeting requests the Corporation to consider the payment of dearness allowance to the staff as the price of foodstaffs has gone up much due to the War. The Bengal Government has sanctioned the allowances and we request the Corporation to sanction the same as their employees are suffering much for the rise of prices of all commodities necessary for the maintenance of life.

"This meeting brings to the notice of the Corporation that the subscription for the Employees Association was not to be imposed on the borrowers of the Workers Bank Ltd. as per direction of the Chief Executive Officer, but the authorities of the Bank now insist that the receipt of the Employees Association should be produced before any loan is given to anybody."

CALCUTTA UNIVERSITY "CENSUS"

A review of the activities of the Calcutta University in all its departments during the year 1940, is contained in the annual report for the year presented to the Senate at a Special Meeting on Saturday last by the Hon. Mr. Justice C. C. Biswas on behalf of the Syndicate.

The total number of schools recognised by the University during the year 1940, was 1,587, of which 621 were permanently and 966 provisionally recognised. Sixty-nine schools were recognised for the first time while 449 schools were granted renewal of recognition.

The total number of students who appeared at the different examinations of the University during the year under review including students who appeared at the Supplementary Matriculation Examination, was 71,295 as against 67,177 in the last year.

There are at present 79 colleges affiliated to the University. Out of these, 11 are exclusively for women, 2 have women's sections completely separate from men's department and 16 admit both boys and girls.

The total number of students reading in the different affiliated colleges as recorded in the college register in September, 1940, was 89,899 of whom 2,578 were girl students.

In Calcutta, the number of students was 20,487. In the mofussil colleges in Bengal the number of students was 15,756 and in Assam colleges the number was 3,206.

Of 18,552 male students in Calcutta, 16,271 were Hindus, 1,742 Mahomedans, 354 Christians and 185 of other religions. Of 15,285 male students in mofussil colleges in Bengal 11,006 were Hindus, 4,094 were Mahommedans, 112 Christians and 73 of other religions. The number of male students in Assam was 2,984, of whom 2,214 were Hindus, 607 Mahommedans, 106 Christians and 57 of other religions.

The number of women students in Calcutta colleges was 1,885, of whom 1,550 were Hindus, 124 Mahommedans, 181 Christians and 30 of other religions. Of 471 women students in mofussil colleges in Bengal, 447 were Hindus, 11 Mahommedans and 13 Christians. There were 222 women students in Assam of whom 162 were Hindus, 11 Mahommedans, 41 Christians and 8 of other religions.

SHIPYARD IN CALCUTTA

In reply to a question in the Central Legislative Assembly Sir Andrew Clow told Sir Ziauddin that the Government had seen the questions and answers in the Bengal Council about the starting of an Indian shipyard in Calcutta. The rates quoted by the Calcutta Port Trust to the Scindia Company for the lease of land were Rs. 9 per cottah per mensem upto March 31, 1945 and thereafter Rs. 11-4-0 per cottah per mensem upto March 31, 1955 and thereafter an increase not exceeding 25 per cent. every ten years up to a maximum of Rs. 27 per cottah per mensem. These rates were the same as those which the Port Commissioners were already receiving for a large area of land adjoining this site. There is a schedule of rates for monthly leases and the schedule rates for this particular site is Rs. 12 per cottah per month.

CIVIC NEWS FROM FAR & NEAR

SHILLONG MUNICIPAL BOARD ELECTION

Mr. K. Cantlie, Deputy Commissioner, Khasi and Jainta Hills, presided on March 1, over the first meeting of the newly-elected Shillong Municipal Board.

Mr. Theodare Cajee, a businessman of Shillong, was elected Vice-Chairman of the Municipality. There was a tie between Mr. Cajee and Dr. Satyabrato Bhattacharjee but Mr. Cajee won the toss,

Mr. Cajee entered the Municipality as Commissioner first in 1937. and was re-elected last year from the Laitumkhra Ward.

MADRAS ROAD POLICY CRITICISED

The Government's road policy was severely criticized by Mr. E. A. Watson, presiding over the annual meeting of the Madras branch of the India Roads and Transport Development Association.

"We are more convinced than ever" said Mr. Watson, "that the burden of taxation carried by motor transport operations in this Presidency is excessive, particulary in relation to the returns that motor transport obtains in the way of roads." He hoped that the authorities would consider the matter and reduce taxes on motor vehicles.

INJUNCTION IN DACCA SUIT

In two separate suits filed by Mr. Nirod Baran Mazumder and Dr. Yadali, two defeated candidates in the last election to the Dacca District Board, from Kaliakari—*cum*—Dhamari Constituency, for a declaration that the election of Mr. Surendra Mohon Roy and Moulvi Momtazuddin Ahmed (Moslem League) from the said constituency was void. Mr. N. L. Shome, a munsiff has issued notices to the defendants to show cause why an *ad interim* injunction, restraining the defendants from acting as members of the Board should not be granted, and in the meantime, has issued such temporary injunction, till the date fixed for showing cause.

KARACHI FIASCO

A meeting of the Karachi Municipal Corporation broke up in confusion on March 1, following the refusal of a member to withdraw from the House when called upon to do so by the Mayor.

The incident was a sequel to the member concerned making alleged objectionable remarks against another member, accusing the latter of corruption in the course of a discussion of a proposal to metal the road leading to the new Government House.

The Mayor thereupon called upon the member to withdraw the remarks. But the member declined to do so and further refused to withdraw from the House. Pandemonium prevailed, in the midst of which an adjournment motion was moved and the meeting ended in confusion.

Earlier the House adopted a proposal requesting the Government to undertake legislation and appoint a Service Commission for local bodies in Sind.

RAJSHAHI HOOLIGANISM

Amidst unprecedented scenes of excitement on March 1, Md. Azizul Alam, a prominent member of the Rajshahi Muslim League, was elected Chairman of the Rajshahi Municipality defeating Babu Sanat Kumar Moitra (8-7) and Babu Saral Kumar Ghosh (8-4).

As soon as the result was declared some Hindu youths who had assembled in the hall are reported to have attacked and severely assaulted Saral Babu and his two supporters. The Muslim youths on the otherhand are reported to have attacked and assaulted one Mahamedan Commissioner who was said to have voted for Saral Babu.

Some shops closed immediately and the excited crowd dispersed after the two persons were removed from the scene.

BIHAR MUNICIPALITIES

The annual Government report on the adminstration of Municipalities in the Province of Behar says that barring a very few instances municipal administration on the whole was far from satisfactory.

According to the Government the main causes of this regrettable state of affairs are the reluctance of municipal commissioners to levy adequate taxation, failure to collect taxes promptly and to take coercive measures and prevalence of personal feuds and party factions. The Government point out that unless these defects are removed and there develops a proper sense of civic responsibility both among rate-payers and the municipal commissioners, there can be no improvement in civic administration.

The financial position shows general deterioration in all aspects, and the Government refer to two practices adopted by some municipalities: encroachment on unspent balances of ear-marked grants and use of credit balances of special funds.

LOCAL BODIES IN THE PUNJAB

General elections of the local bodies falling due upto June 30, 1941, had been postponed for one year and the question of the postponement or otherwise of elections which fell due after that date was under consideration, announced Sheikh Faiz Mohd., Parliamentary Secretary to the Minister for Public Works, at question hour in the Punjab Assembly which met on March 3, to vote on demands for supplementary grants.

In the absence of the Speaker, Sir Shahabuddin who met with a car accident during the week-end, Sardar Dasondha Singh, Deputy Speaker was in the Chair.

Sardar Bahadur Abnasha Singh, the Secretary of the Legislative Assembly said that the injuries sustained by Sir Shahabuddin were not serious and that he was progressing satisfactorily.

Sir Sikandar Hyat Khan the Premier and Sardar Santokh Singh, leader of the Independent Party wished speedy recovery to the Speaker.

Sardar Ujjal Singh, Parliamentary Secretary informed the House that a number of unlicensed arms, including three revolvers, ten pistols and eight rifles were recovered by the police in the district of Sargodha during the last six months. Some more arms were surrendered to the police. Special police were making enquiries.

The House then proceeded to discuss supplementary demands aggregating to a sum of Rs. 54 lakhs.

BOMBAY CENSUS

The Bombay's population is well over 1,500,000 is one of the early indications of the census, the operations of which entered on their final phase in the city on the night of February 28.

Thousands of voluntary enumerators, with their sphere of work carefully delineated for them, went from house to house obtaining the necessary answers to the census questionnaire. A well-thought out scheme was also put into operation in order to enumerate the homeless.

A feature of the census was the "rounding up" of the city's huge army of beggars and vagrants for which purpose the police combed by-lanes, the *maidans*, arches of bridges and other havens of mendicancy.

While the great majority were too nervous to reply to the questions or too ignorant to understand them some of the beggars surprised the enumerating staff by giving replies firmly and fluently in English. One 55-year-old man who had lost one of his legs, when asked "Why he was begging," replied that he was willing to work but that no one would give him a job.

Dr. Khatre, under whose spervision the census in the city was carried out, said that the scrutiny of preliminary enumeration would continue for three more days.

Special arrangements had been made for enumerating lepers and other afflicted people, precautions being taken to bring them to one place with the assistance of the municipal authorities.

MADRAS PORT BOARD

An equal number of seats for European and Indian commercial interests on the board for the Port of Madras is proposed in a Bill to alter the constitution of the Board, introduced in the Assembly this session by Sir Anderw Clow, Communications Member.

The constitution of the Board, it is explained was last revised in 1923 Changes in circumstances since that date justify a further revision. Six seats are at present assigned to European commercial interests and four to Indian commercial interests.

Information now available, it is pointed out, suggests that European and Indians share almost equal in the traffic of the Port. It is, therefore, proposed to assign four seats to the Madras Chamber of Commerce, three to the Southern India Chamber of Commerce and one to the Southern India Skin and Hide Merchants' Association.

Although it is ordinarily desirable to avoid the representation of specific branches of commerce the representation of the last Association is retained on account of its special position. One elected seat has been assigned to Madras Corporation and it is proposed that one seat should be reserved for a representative of labour, in accordance with a recommendation made by the Royal Commission of Labour.

Of the remaining seats, it is proposed that one should be filled by a nominee of the Government of Madras, who are at present unrepresented.

The others include the Chairman and will permit of representation of railway interests and of the appointment of the Collector of Customs.

The Board is to consist of 15 trustees including the Chairman.

LEGAL INTELLIGENCE

DRAINAGE ARRANGEMENTS SHOULD NOT ENDANGER HEALTH

Injunction Against Lahore Municipality

Can sullage water be discharged into a storm drain? What is the remedy when this causes nuisance? These important points were answered by Mr. Justice Beckett at the Lahore High Court in delivering judgment in the above appeal in which His Lordship granted an injunction against the Administrator, Lahore Municipal Committee, restraining him from discharging sullage water into the storm water channel which runs through the junction of Khwaja Dil Mohammad Road and Shah Abdul Mali Road, Lahore, till certain arrangements are made. The following was the judgment delivered by His Lordship :—

This is a suit which is in substance against the Lahore Municipality, but for formal purposes the Punjab Government has been joined as a defendant along with the Administrator. The facts are more or less admitted. There is an old storm water channel in the areas known as Gawalmandi, which was constructed before that area became thickly populated, as it is now. With the increase of population, the need for sanitation has grown more acute and the Municipality has adopted the simple expedient of discharging sullage water into the old storm water channel. The plaintiff claims this has led to two distinct nuisances, from which he in particular is a sufferer. During the rainy season, the water now overflows into his house, with unpleasant results. At other times, the water in the channel becomes stagnant, and gives off a stench so offensive that his house is practically uninhabitable. He, therefore, seeks an injunction to restrain the Municipality from discharging the sullage water into this channel, or, in the alternative, to compel it either to convert the channel into a suitable drain or to have proper drainage laid down elsewhere.

The fact that the present arrangement constitutes a nuisance to the plaintiff does not appear to have been seriously contested. The site was inspected by the learned Subordinate Judge before whom the trial was held. He found that the channel in front of the plaintiff's house was far from clean; it was filled with sullage water which was running very slowly and a very bad smell was coming from it. Moreover, the floors of the house were damp inside. It is true that the Municipal Engineer reported that the drain was working well except in the rainy season; but he appears to have viewed the satisfactory nature of the arrangement

from the point of view of the Committee rather than from the point of view of the plaintiff.

Although the nuisances were thus established, the relief claimed by the plaintiff has been refused by both the Courts below. The trial Court appears to have regarded the case as one of non-feasance rather than misfeasance, and it took the view that the Committee could not be directed to make any other drainage arrangement. The learned Senior Subordinate Judge, who heard the first appeal, appears to have proceeded on the view that the present state of affairs was the inevitable outcome of the increase in population and that the existing arrangements were as satisfactory as the Committee could be expected to make in the circumstances.

The view taken by the learned Subordinate Judge, that the Committee cannot be compelled to make other drainage arrangement, is correct as far as it goes, but it does not really meet the plaintiff's case. It is true the Committee need not make any drainage arrangement at all unless it chooses to do so. If it chooses to make arrangement for the disposal of offensive matter, however, it must make satisfactory arrangements, and cannot make arrangements which endanger the health and completely destroy the comfort of individuals. Though Indian Authorities appear to be lacking there are a number of English cases to the point (1906) A. C. 105 is a decision which proceeds on very similar facts. In that case the municipal authorities, acting under their statutory powers, took over the care of a watercourse and made it into a public drain which proved in course of time to be increasingly insufficient to hold and pass on the mixture of slime and sewage poured into it, with the result that the plaintiff's property was flooded thereby. It was held that they were liable for negligence, notwithstanding that the drain when first formed was sufficient for its purpose.

This case proceeded on negligence, but there are other cases in which similar arrangements are treated as nuisance. It has been held that, where sanitary authorities so manage their sewers as to affect the health or comfort of the public or the inhabitants of a large district, they commit a public nuisance: see 2 Jur. (N. S.) 180, 6 7. R. 811 and 1 Ch. 560 (C. A.) The *prima facie* right of every occupier of a piece of land is to enjoy that land free from all invasion of filth or other matter coming from any artificial structure on land adjoining. It was held in I. L. R. 32 Cal. 697 that a private person could not claim a right to foul an ordinary drain by discharging into it what it was not intended to carry off so as to interfere with the ordinary comfort of another person. It may be that in certain cases the comfort of the private individual must to some extent suffer in the public interest, if this cannot be avoided; but in the present instance it has not been shown that no other arrangement could possibly be made, and it has in fact been stated that more satisfactory arrangements for drainage are already under contemplation. As already mentioned, the Committee cannot be compelled to make satisfactory drainage arrangements, but if it undertakes the duty of making such arrangements, the authorities given above make it clear that it can be restrained from making arrangements which are negligent or dangerous to health or even interfere with the ordinary comfort of an individual.

For these reasons, I am of opinion that the plaintiff is entitled to an injunction, since damages alone will not give him the relief to which he is entitled.

There is one small technical difficulty which has to be considered in this connection. An injunction cannot be given to interfere with the working of Government departments. The Administrator, however, has been separately impleaded. No objection has been taken to this course and the only appearance before me is on behalf of the Administrator. An injunction will accordingly be granted to restrain the Administrator of the Lahore Municipality from discharging sullage water into the storm water channel which runs through the junction of Khwaja Dil Mohammad Road and Shah Abdul Mali Road, Lahore, unless and until such arrangements are made as will prevent the water therein from overflowing during the normal rainy season and will secure that the channel is properly flushed and kept clean at other times. The plaintiff will receive his costs throughout.

ASSOCIATION OF ENGINEERS

Dr. B. N. Dey's Address

In his presidential address delivered on the occasion of the 22nd Anniversary Meeting of the Association of Engineers, held on the 27th February last at the 'Chamber Hall; 2, Royal Exchange Place, Calcutta, Dr. B. N. Dey, D.Sc. (Glas) F.R.S.A., (London), M.A.E., M.I.E., (Ind.) said *inter alia* :—

"Our annual report gives us no cause for anxiety. The Association of Engineers have held together tenaciously close upon quarter of a century as an independent organisation, on its own legs, without subsidy from any quarter, and in the face of disintegrating influences of a decadent age.

With the dawn of a "New Order" signs of which are already apparent—as witness the training of Indian *Mistries* (technicians) in Great Britain alongside the Britishers—one may expect the advent of the long-deferred revolution of Indian Engineering, and with it the rapid vitalisation of Association like ours. It seems that the Indian Engineer will at last get a dog's chance to assert himself.

From now on my presidential addresses will be brief—briefer even than those of years gone by—as an index to the changing order of things. Too much talk has of late become a national failing with us. The reasons are not far to seek. We have been reduced to so many empty vessels due to dearth of vocations.

Conditions are however changing. There are now enough things to do, particularly for us engineers, if only we would look around and shake off our lethargy born of despair. Hence forward we will find ourselves far too busy to find time for talk, idle or otherwise.

It is a commonplace talk that the war has unsettled everything and that one must wait until peace is restored in this world of ours. I cannot subscribe to this attitude of mind. Peace among the Powers of this world has not meant a thing to us, has only promoted the creeping paralysis with which we have been afflicted due to causes beyond our control. One has only to look back to the past quarter of a century—I mean the years 1914 to 1939—the years that were frittered away mostly in foolish fumblings.

Let us quit being "copy-cats." Let us stop playing the fool of a *burra-sahib* or *chota-sahib*," a "covenanted hand" or a "gasetted officer." Let us put our houses in order. If we do not do it in our own way, no one else would. Let us develop our resources from within profited by the experience, failure and success of the foreigner. Let us build in the only practical way, Bengal by the Bengalees and India by us all Indians. We engineers can only do it."

THE Improvement Trust

(I)

The following extracts are taken from the Proceedings of the Meeting of the Calcutta Improvement Trust, held on Saturday, the 18th January, 1941, at 10-30 a.m. :—

Present :—Mr. C. W. Gurner, C.S.I., I.C.S., *Chairman*, Mr. Abdur Rahman Siddiqi, M.A., LL.B., Barrister-at-Law, M.L.A.; Rai Sahib Chandan Mul Karnani, J.P., Mr. A. J. Thompson, D.S.O., M.C., F.R.I.B.A., F.S.I., Mrs. Hasina Murshed, M.B.E., M.L.A., Mr. Sudhir Chandra Ray Chaudhuri, Mr. J. J. N. Birch, Mr. Md. Rafique, Mr. F. Rooney and Sir Hari Sanker Paul, Kt.

DESHABANDHU MEMORIAL

The following Resolution (Item No. 4), which was passed by the Land Committee at their meeting on the 15th January, 1941, was *confirmed* :—

"Miscellaneous Case No. XV-15. *Re.* Transfer of Calcutta Improvement Trust land adjoining to Deshabandhu Memorial at Shahnagore Burning Ghat, in Scheme No. XV-A.

"The Committee considered the Chief Valuer's note of the 7th January, 1941, and resolved that the land coloured pink on the plan attached to the report and having an area of 22 kottahs 9 chittacks 15 square feet, and situated to north of the Deshabandhu Memorial now numbered as Plot No. 57, Scheme No. XV-A, be sold to the Calcutta Corporation for the sum of Rs. 21,240 on the following conditions :—

"(1) That the land should only be levelled and shown with grass and enclosed by railings by the Corporation until after the construction of the Chetla Bridge.

(2) That the Corporation will allow the Trust to use the land, if necessary, for the storage of materials when the bridge is under construction, subject to the condition that the land will be restored to the Corporation in its original condition.

(3) That the Corporation will be given the right to purchase the strip of land that would be left out between this plot of land and the final alignment of the bridge approach road at the same rate per kottah."

OBJECTIONS COMMITTEE

The Board *appointed* a Committee consisting of the following gentlemen to hear objections to Imprvement Scheme No. LIV (Topsia) :—

Sir Hari Sanker Paul, Kt.

Mr. Abdur Rahman Siddiqi, M.A., LL.B., Barrister-at-Law, M.L.A.

Mrs. Hasina Murshed, M.B.E., M.L.A.

Mr. J. J. N. Birch.

Mr. Sudhir Chandra Ray Chaudhuri.

Mr. P. K. Dutta (appointed under Section 20 (1) (iii) of the Act) and

The Chairman.

LEAVE OF ABSENCE

With reference to Resolution No. 4 of the Board Meeting, held on the 7th September, 1940, it was *resolved* that Mr. F. Rooney should be granted leave of absence from the meetings of the Board from 2nd September, 1940, to 17th January, 1941.

It was reported that Mr. Md. Rafique had applied for leave of absence from the meetings of the Board, from 23rd November, 1940, to 17th January, 1941.

LEAVE TO EMPLOYEES

It was *reported* that Government, in letter No. 30M., dated the 8th January, 1941, had accorded their sanction, under Section 33 of the Calcutta Improvement Act, to the adoption by the Board of Trustees, of the following proviso to Rule 11 of the rules regarding the grant of leave, leave allowance and acting allowances to their inferior servants, sanctioned in Government letter No. 1937M, dated the 22nd June, 1938 :—

"Provided that the Chairman may, in special circumstances, grant extraordinary leave to an employee up to 12 months in excess of the total period of 24 months and up to six months on any one occasion."

It was *noted* that the proviso would take effect from the 1st April, 1938.

(II)

The following extracts are taken from the Proceedings of the Meeting of the Calcutta Improvement Trust, held on Monday, the 3rd February, 1941, at 10-30 a.m. :—

Present :—Mr. C. W. Gurner, (*Chairman*), Rai Sahib Chandan Mul Karnani, Mr. A. J. Thompson, Mrs. Hasina Murshed, Mr. Md. Rafique, Mr. F. Rooney and Sir Hari Sanker Paul.

DESHABANDHU MEMORIAL

The Proceedings of a Meeting of the Land Committee, held on the 15th January, 1941, were *confirmed*, with the exception of Item No. 4 (Miscellenous Case No. XV-15. *Re.* Transfer of Trust land adjacent to Deshabandhu Memorial at Shahnagore Burning Ghat) which was confirmed by the Board at their meeting on the 18th January, 1941.

HOWRAH BRIDGE APPROACH

The Board considered the Chief Valuer's report of the 29th January, 1941, on information asked for by Government, in letter No. 112M., dated the 21st January, 1941, about the position of the Roman Catholic Church premises, in Scheme No. L (Howrah Bridge Approach—from Canning Street to Strand Road) and *recommended* that it be communicated to Government.

RETIRING GRATUITY

The Board considered the Chairman's note of the 27th January, 1941, and *resolved* that the employees of the Calcutta Improvement Tribunal, who are not subscribers to its Provident Fund, should be granted a retiring gratuity of half a month's pay for each year's service, subject to a limit of 15 months' pay, like the employees of the Trust who are not subscribers to its Provident Fund, for continuous good service of not less than 15 years.

THE TRUST OFFICE

With reference to Resolution No. 7 of the Board Meeting, held on the 9th December, 1939, about the lease of the office premises, the Board considered a letter, dated the 28th January, 1941, from Messrs. The South British Insurance Company, Limited, and *resolved* that the South British Insurance Company be informed that as the Trust do not at present require any additional accommodation for their office in the ground floor of the premises they would have no objection to the ground floor being leased to another party.

Mr. Rafique raised the question of the Trust building its own offices on its own land and the Chairman stated that a report on the subject would be submitted in due course.

VITAL STATISTICS

For the City of Calcutta for the week ending 1st March, 1941.

CITY OF CALCUTTA (TOWN & SUBURBS)

The total number of deaths registered during the week was 1030 against 851 and 864 in the two preceding weeks and higher than the corresponding week of the last year by 391. The general death-rate of the week was 46·9 per mille against 34·4 the mean of the last five years.

Town (Wards 1—25 and 27)

The number of deaths registered during the week ending 1st March, 1941, was 884 against 716 and 765 in the two preceding weeks. There were 33 deaths from cholera, against 30 and 27 in the two preceding weeks. There were 304 deaths from small-pox during the week against 138 in the previous week. There were 3 deaths from influenza against 4 in the previous week. The mortality from fevers and bowel-complaints amounted to 30 and 82 respectively against 29 and 64 in the preceding week. The general death-rate of the week was 46·0 per mille per annum.

There were 37 imported deaths. Excluidng these, the death-rate of the Town was 44·1.

There were 116 deaths from respiratory diseases against 126 in the previous week.

There were 41 deaths from bronchitis against 34 in the previous week.

There were 143 deaths of infants under one year.

Suburbs (Wards 28—32)

The number of deaths registered was 146 against 135 and 99 in the two preceding weeks. Of these 3 were from cholera, 39 from small-pox, nil from influenza, 6 from fevers, 19 from bowel-complaints and 20 from respiratory diseases. The death-rate of the suburbs (or added areas) was 53·4 per mille.

There were 13 imported deaths. Excluding these, the death-rate was 48·7.

There were 11 deaths from tuberculosis against 15 in the previous week.

There were 27 deaths of infants under one year.

DR. DEY'S OUTFALL SCHEME

NOTICE

Re. Petty Repairs Including Painting To Ferry Pontoons Plying Along The Storm Water Channel

Quotations in sealed covers are invited for the work of petty repairs, including painting, to ferry pontoons plying along the Storm Water Channel and will be received by the undersigned upto 2 p.m. of Friday, the 14th March, 1941.

Detailed particulars as to the nature, quantity and specification of the work may be seen in the office of the undersigned during office hours. Successful tenderer will have to deposit a sum of Rs. 50 in cash as security money and he must complete the work within one month from the date of acceptance of his tender.

A. N. BANERJEE,
Outfall Engineer.

Central Municipal Office,
The 6th March, 1941.

CORPORATION NOTICES

To Contractors

Tenders are invited in duplicate for the following and will be received by the First Deputy Executive Officer on the date noted for each, up to 2 p.m. Each tender in duplicate must be enclosed in a sealed cover and superscribed—"Tender for....." For specifications and tender forms apply to the Keeper of Records between 11 a.m. and 3 p.m. on week days and 11 a.m. and 1 p.m. on Saturdays. Price Re. 1 per set.

1. Supply of registers for house water meters.

2. Supply of cart number-plates and Drivers' Ticket for 1941-42.

3. Shoeing ponies and horned cattle at the Municipal Gowkhanas during 1941-42.

4. Supply of carts for removal of stores during 1941-42.

5. Painting of electric lamp posts in different streets of Calcutta.

6. Cutting and restoring trenches in public roads for laying water mains during 1941-42.

Tenders for 1 and 2 will be opened on 11th March, for 3 on 12th March, for 4 to 6 on 18th March, 1941. The rates quoted in tenders for 1 and 3 to 6 are to hold good for three months and those quoted in tenders for 2 for two months.

N.B.—All cases of delay over a fortnight in the execution of agreements in respect of works and supply of materials will be reported to the Committee and the parties will not be allowed to execute the agreements after that period without obtaining orders of the Committee.

In case a party deposits earnest money by cheque, he must deposit the cheque at least three working days before the date of opening of the tender.

The contractors should maintain an uniformity of their names and styles of business, appearing on various documents, *e.g.*, Treasurer's receipts, tender forms, agreements, licenses and bills.

Any deviation from this on the part of any contractor whenever detected, will render his tender liable for cancellation.

Where tenders are submitted by a Corporation, it should be signed by a principal officer of the Corporation or by an agent duly authorised in that behalf and be attested by a witness. Where it is submitted by a firm, it should be signed by the proprietor or one of the partners or by an agent duly authorised in that behalf by the firm and be similarly attested.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 5th March, 1941.

Re-naming Of Street

The following name has been sanctioned by the Corporation for a lane in Ward No. 4 :—

Chaltabagan Second Lane to be renamed and called "Vaishnav Sammilani Lane."

D. N. GANGULI,
Assessor.

Central Municipal Office,
The 26th February, 1941.

Situation Vacant.

Applications are invited and will be received by the undersigned upto 14th March, 1941, for the following posts of the Baldeodas Maternity Home, Corporation of Calcutta :—

(1) One Sister-in-charge on Rs. 100 in the grade of Rs. 100—150 with free unfurnished quarters.

Candidates for this post must possess a senior certificate in general nursing and midwifery, and must be registered under the Bengal Council of Registration of Nurses and must be capable of giving practical instructions in Vernacular to pupil nurses under training when necessary.

(2) One Ward Sister on Rs. 80 per month in the grade of Rs. 80—100 with free unfurnished quarters.

Candidates for this post should be duly qualified nurses and registered under the Bengal Council of Registration of Nurses.

(3) One female R.M.O. (part-time) on an allowance of Rs. 75 per month.

Candidates for this post should be registered medical practitioners. Preference will be given to the candidates who have past experience.

(4) Two Staff nurses on Rs. 65 per month each in the grade of Rs. 65—80 with free unfurnished quarters.

Candidates for this post should possess certificates of general nursing and midwifery and must be registered under Bengal Council of Registration of Nurses.

The applicants should state the following : (1) Age, (2) past service, if any, (3) whether related to the Mayor, Dy. Mayor, any Alderman or any Councillor or Statutory Officer of the Corporation by blood or marriage.

The selected candidates will have to submit a Declaration under Section 54/A of the Calcutta Municipal Amendment Act before joining their duties. Those selected for the posts under (1), (2) and (4) above will have to contribute to the Corporation Provident Fund and will be guided by the leave and service rules of the Corporation.

This is in supersession of the previous advertisement issued.

S. N. GHOSE,
Health Officer.

Central Municipal Office,
The 5th March, 1941.

Applications are invited from Bengali Hindu ladies for the post of Assistant Mistress in the Raj Rajeswari Girls' Model School in the grade of Rs. 45—90 plus a travelling allowance of Rs. 10 per month. Candidates must have passed at least the L. T. Examination.

Applications should reach the undersigned not later than the 15th March, 1941.

A. BARUA,
Education Officer.

Hogg Building Extension,
The 5th March, 1941.

F. RAHAMAN,
Assistant Collector.

Central Municipal Office.
The 5th March, 1941.

Street Declaration.

Under Section 65 of the Calcutta Improvement Act.

To all whom it may concern, the Corporation of Calcutta, in exercise of the power conferred on it by Section 65 of the Calcutta Improvement Act (Bengal Act V of 1911) and having been satisfied that the conditions laid down therein have been fulfilled, hereby notifies and declares that the street specified hereunder, which has been laid out by the Board of Trustees for the Improvement of Calcutta and comprised in its Scheme No. VIII is a public street within the meaning of Sections 3 (57) and 295 of the Calcutta Municipal Act (Bengal Act III of 1923) :—

The 12 ft. Development Road at Plot Nos. 26 and 27 of C. I. T. Scheme VIII-20 No. VIII as shown in Drawing No. 40

J. C. MUKERJEA,
Chief Executive Officer.

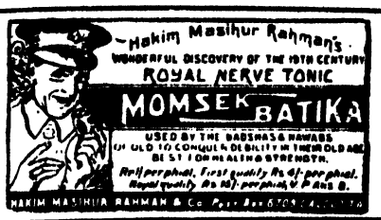
Central Municipal Office,
The 7th March, 1941.

Street Alignment.

Notice is hereby given under Section 308 read with Section 302 of the Calcutta Municipal Act III (B. C.) of 1923 that the Roads and Bustees Standing Committee of the Corporation in exercise of the powers delegated unto them in this behalf have prepared a scheme and plan showing the alignment of a 40 ft. projected public street from Chingreehatta Lane through premises No. 36/1, Tangra Road to Hughes Road, in Ward 18.

Any person having any objection to the same should submit it in writing so as to reach the undersigned on or before Friday, the 21st March, 1941.

A copy of the plan showing the proposed alignment may be seen in the office of the Chief Valuer and Surveyor of the Corporation between the hours of 11 a.m. and 2 p.m. on all working days.



J. C. MUKERJEA,
Chief Executive Officer.

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—
10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.
Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with **Red** numbers on a **Blue Black** badge. "B" class coolies of Hogg Market have **Rectangular** brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. **No dogs, bicycles, tricycles or perambulators are allowed inside the market.**

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

A. QASIM,
Acting Supdt., S. S. Hogg Market.

IF CALCUTTA IS AIR-ATTACKED

"No Protection Against High Explosive Bombs"

THE Government of Bengal have issued a Press Note declaring their inability to offer protection to people against a possible air-raid attack. They cannot, they say, provide any form of shelter for such protection. The enormous cost of such shelters and the soil of the province are said to stand in the way of any such thing as underground concrete or steel shelter.

"In Bengal," the Press Note adds, "it must be recognised that there is no protection within the bounds of practical politics against direct hits from high explosive bombs."

The only protection that the Government offer is to dig "slit trenches" in open public places for the safety of passersby caught out in the open during an air attack.

Such trenches will be dug in selected public parks and open places all over Calcutta. But as owing to the congested nature of the city area these trenches cannot be provided in all streets the public are advised, in case of air-attack, to "seek shelter in the nearest available house." Citizens are also advised to make similar trenches for themselves and their families.

SMALL-POX EPIDEMIC IN CALCUTTA
GET YOURSELF INOCULATED

TRENCHES TO BE DUG IN PUBLIC PARKS AND OPEN SPACES

The Government of Bengal, says a Press Note, have had under their most careful consideration the question of protecting the general public against the effects of bombs in a possible air-raid attack.

They have decided that they cannot provide any form of concrete or steel shelter for members of the general public. They have also decided that they cannot agree to carry out any policy of subsidising the strengthening of private houses.

The enormous cost that would be involved in such schemes makes their acceptance an impossibility. Further, as the sub-soil water level in Bengal is approximately 2 ft. 6 in. below the ground level, it is out of the question to provide deep shelters which in countries like England are the only shelters which give complete protection from high explosive bombs.

In Bengal it must be recognised that there is no protection within the bounds of practical politics against direct hits from high explosive bombs.

As regards protection against blast and splinters solid brick walls 9 in. thick give reasonable protection while a wall 13½ in. thick gives complete protection against anything except a direct hit or a miss within 17 yards.

It has been laid down in the draft Bengal Air Raid Orders which have already appeared as a Press Note that members of the public in a building during an air-raid should stay there, and if outside should seek shelter.

As most *pucca* houses in India have thick walls on account of the heat they afford good protection to their inmates. The main danger will be the entry of bomb splinters through window and door-ways which are numerous, and the shattering of glass windows by blast. It should be the universal practice, therefore, during an air-raid to see that glass doors are kept open and all *jhilmills* shut.

The protection to be given to members of the general public caught out in the open during an air attack and to factory workers has also been considered. The Government of Bengal have decided that slit trenches should be dug in open public places for the safety of passersby and should be close to factories for that of the factory workers.

In Calcutta Area

Owing to the congested nature of the Calcutta area it will not be possible to provide slit trenches in all streets and in such places passersby caught in open will have to seek shelter in the nearest available house. Where, however, there are open spaces slit trenches will be provided and will give the best possible measure of protection.

Although these trenches will be above sub-soil water level they will hold a certain amount of water in the rains and it would be necessary to pump them out occasionally but it is not considered that it would be a very great hardship to sit in a few inches of warm water for the sake of safety.

Sample trenches will be dug in selected public parks and open places all over Calcutta and in the industrial area of the 24-Parganas, Howrah and Hooghly so that the public can inspect and take particulars from notice-boards on which will be painted particulars as to dimensions, etc. They can then consider making similar trenches for their work people or for themselves and their families in their own compounds.

IN CASE OF EMERGENCY

Proposal For Central Control Room

Somewhere in the city of Calcutta a Central Control Room is proposed to be made available for the purpose of co-ordinating all essential services for their maintenance and repairs in case they break down during an emergency.

For this purpose, it is understood, the Corporation of Calcutta, Gas and Electricity companies, Railways and Telephone Corporation have been invited to send their representatives to be on board of the proposed Control Room

---

FOR PROTECTION OF MUNICIPAL OFFICE AND CORPORATION PROPERTIES

Precautionary Measures Contemplated

The Chief Air Raid Warden has drawn the attention of the Corporation to the necessity of taking precautionary measures for the protection of the Central Municipal Office Buildings and other Corporation properties in case of attack from the air.

In the course of a comprehensive note the Chief Air Raid Warden says that in case of an air-raid, Calcutta, because of its special importance, is likely to be first target of attack—"a very likely and sure target". He points out that the Central Municipal Office Buildings is alone worth over 8 lakhs of rupees besides being the repository of the invaluable and important records and documents on which are based the rights and privileges of the Corporation will be at Stake". He stresses on the "Civic value" of the Central Municipal Office Buildings with its charts and plans and papers on the protection of which is dependent the maintenance of the entire conservancy, water-supply and drainage arrangements for the entire City area of over 27 square miles.

The Chief Air Raid Warden suggests that an Expert Committee should be formed to go into the question and decide upon fire fighting measures, preventive, rescue and relief measures and training organization.

"We should lose no time", says the Chief Executive Officer, "in organizing ourselves". He thinks an Expert Committee should be formed to advise the Corporation as to the steps to be taken to protect Corporation properties.

CHIEF AIR RAID WARDEN'S NOTE

The note says :—

The tangle in the International situation which is being daily given out in Foreign Press Telegrams (*Reuters* and others), supplemented by the rapid march of events in the Far Eastern situation have forecast in clear terms the imminence of a grave danger and the probablity of an Air Raid on this premier city.

From the recent announcements it is clearly evidenced that the war situation is daily developing. Considerable attention, as is natural, has been focussed on some of the press notices. An A. R. P. Official of the Central Board also, while making a review of the present situation only last week, has emphasised a possible fear of an Air Bombing in Calcutta within the next 50 days or so. While assuming that presumptions may belie for the better, in an atmosphere of such tense situation, it is, as is generally the case, meet and proper, to adopt and arrange for the best possible precautions. This is being done in some of the self-governing institutions in muffusil towns.

Calcutta has a special importance in view of its local situation and for political and other reasons. In case of an Air Raid, assuming the worst, it is likely to be the first target of attack and protective mesures that are proposed and may be taken by the Central Board and/or the Government will, it is felt, be of a general nature for the whole of Calcutta. The latest amendment of the Defence of India Rules as announced by the *Associated Press* provides for special provisions for compulsion to be exercised on owners of public institutions and also of factories and industries for necessary measures for the protection of their own men. These recent rules go further and intend to provide for the measures for the protection of the life and property in the neighbourhood of such an institution and the legal compulsion, it is laid down, will apply on owners of such institutions—each such owner being under Defence of India Rules, as modified, held responsible for all initial expenses and control service.

As has already been submitted, in case of an Air Attack, Calcutta is a very likely and sure target. A fore-warning and the question of fore-arming devolops no less upon the Corporation as the repository of the civc administration of this populous city. The Pumping Stations and other places have already been declared as "Prohibited Places" and steps appear to have been taken in that regard already. The Central Municipal Office Buildings, which is the nerve-centre of the City Administration, comprises within its walls a Printing Press, the working of which is regulated under the Factories Act. The Corporation Buildings itself is valued for Insurance Purposes at Rs. 7¼ lakhs. Besides this (i) the telephone and electric installations are estimated at Rs. 5,200, (ii) furniture at Rs. 10,000, (iii) files and papers at Rs. 11,000, and (iv) drawings and plans at Rs. 10,000. The total money value of contents including the structure of the Central Municipal Office Buildings is over 8 lakhs. Besides, the invaluable and important records and decuments of which are based the rights and the privileges of the Corporation will be at stake.

The civic value of the Central Municipal Office Buildings is greater still. The entire conservancy, water-supply and drainage arrangements for the whole of the City area over 27 square miles are dependent upon the proper custody of charts and plans and papers in the Central Municipal Office Buildings. All this is apart from any historical and aesthetic vaule attaching to all such documents. In consideration further of the fact that even when an extreme emergency arises in which case the City may be declared a military area the common utility and public services as indicated above are likely to continue to devolve upon the Corporation for the control and efficient management and regulation of which, it is forecast, it would be incumbent upon the Corporation to adopt suitable measures for the protection, rescue and relief of the staff and labour. In the absence of any such arrangements a deadlock and dislocation of an inconceivable and far-reaching character would arise.

Precautions and preventives being felt necessary it is also submitted that considerable amount of success of any measure which may be adopted or may be decided upon for adoption at a later stage will follow from the normal effect that may be created from now and may exist at the time of stress, among the man power, the staff and labour who may be called upon to take their stand on their duties at the moment.

In all these aspects of the case and in view of the considerable civic importance which attaches to the question of A. R. Precautions in regard to the Central Municipal Office Buildings, we are called upon to submit that the grave issues involved require very immediate and serious consideration.

I submit as such that the subject may be referred to the Estates and General Purposes Committee which may be requested to appoint an Expert Committee to go into the question and decide upon the following :—

(i) Fire Fighting Measures.

(ii) Preventives from blasts and splinters of explosives.

(iii) Rescue and Relief Measures including First Aid and Medical Relief.

(iv) Training Organisation and to devise and suggest ways and means for and in furtherance of all or any of the aforesaid subjects.

POSSIBLE AIR ATTACK

Government Warns Shillong Municipal Board

A warning that, unless the Shillong Municipal Board has made adequate equipment for fire-fighting, the absence of which has "seriously perturbed the Government", within a fortnight, the Government might find it necessary to invoke the operation of the Defence of India Rules, contained in a letter received by the Chairman of Board from the Government of Assam.

Referring to a possible air attack, the letter points out that the Government consider that the Board should regard provision for fire-fighting as its first obligation at the present time and the Government must, therefore, require the Board to take practical steps to fulfil this obligation without further delay.

The Government letter will be circulated to Ward Commissioners at a Special Meeting of the Board on March 17.

"WE SHOULD LOSE NO TIME"—SAYS THE CHIEF EXECUTIVE OFFICER

Commenting on the above the Chief Executive Officer remarks as follows:—

"We should lose no time in organising ourselves. Those on whom we have to depend for protection are, it appears, of opinion that the danger to the city from the air attack may be considered to be imminent in view of the complications in the Far East. The note brings out the possibilities and suggest what should be done. I think an Expert Committee should be formed to advise the Corporation as to the steps to be taken to protect our properties, safeguard the interests of citizens including our own employees and permit work to be carried on as smoothly as possible at the time of need. There is an unofficial organisation giving A. R. P. training to such of our employees as wish to go through a course but this is not enough. There must be a more comprehensive organisation embracing all sides of the problem."

CONSERVING FOODSTUFFS

Government Enquiry From The Corporation

The Government of Bengal have enquired of the Calcutta Corporation as to what arrangements could possibly be made in regard to conserving food-stuffs in the different Municipal Markets in the city in case of an emergency.

The Corporation Executive have already consulted the Superintendents of the Municipal Markets and are now preparing a scheme to be submitted to the Government shortly.

The Superintendents, Municipal Markets since met in a Conference to consider the problem of ensuring adequate supplies of foodstuffs in the event of aid-raids. They have pointed out to the authorities that only a part of the consuming public of the city depend totally for their supplies on the municipal markets. A larger percentage of the city-population buys from unorganised dealers situated at various points near their quarters.

The municipal markets by themselves can meet, therefore, the normal demand of their clients for a month without getting supplies from outside, but in case the municipal markets become the sole agencies of supply to the demands of the citizens of Calcutta, then it will be hardly possible for the Corporation markets to meet more than two days' demands without having to call on other stockists in the city or outside for supplies.

The Market Superintendents have also pointed out to the desirability of stocking in large quantities in the three municipal markets namely, the Hogg Market, the College Street Market and Entally Market, foodstuffs such as rice, *dal*, salt, potato, *ghee*, butter and oil. Coal is also one of the necessities whose stocking has been suggested. Measures for protection of these stores and requisitioning arrangements of lorries for distributing these are also under consideration.

YOUR CITY

You will be wiser to contemplate day by day the might of your City and become her passionate lovers, letting her grandeur and her glory inspire you to reflect that it was all gained by brave men, who knew their duty; by men who, when they failed in any enterprise did not bereave the city of their virtue but gave freely the fairest offering within their means, aye, their very bodies to the common weal and thus won for themselves unfading praise and a most famous tomb—not that in which their glory lives in eternal remembrance to be celebrated by every opportunity of word or deed. Of famous men the whole world is the tomb.

—Pericles.

THE WEEK IN THE CORPORATION

A SHORT RECORD OF THE MORE IMPORTANT DECISIONS OF AND DISCUSSIONS AT THE CORPORATION MEETINGS FOR THE WEEK ENDING MARCH 14, 1941

[The reports of the meetings of the Corporation appearing below are, in most cases, a summary of the proceedings.—Ed., "C M G."]

THE THIRTY-FIFTH ORDINARY MEETING HELD ON WEDNESDAY, THE 12TH MARCH, 1941

No Revision Of Grades, Special Increments, Etc.

Establishment Special Committee's Recommendations Accepted

ALL resolutions passed by the Corporation subsequent to August 23, 1939, sanctioning revision of grades, special increase within the grades, special allowances and additional emoluments, be rescinded provided any officer or employee affected by this resolution might apply through the Head of his department to the appropriate Committee or the appointing authority for reconsideration of his case.

All resolutions passed by the Corporation subsequent to August 23, 1939, sanctioning additional staff or the permanent retention of the additional staff continuing on a temporary basis prior to August 23, 1939 be modified and the said staff be continued on a temporary basis up to June 30, 1941, provided that if the Chief Executive Officer certified the further retention of such additional staff either on a temporary or permanent basis, the cases might be placed before the appropriate committee or the appointing authority for the time being by May 30, 1941 for reconsideration.

The above was adopted by the Corporation by way of an amendment, moved by Mr. Debabrata Mookerjee to the resolution of the Establishment Committee appointed by the Corporation to consider 'de novo' the cases of revision of grades, special increments, extension of services, etc., sanctioned by the Corporation during the year 1939-40.

The resolution of the Establishment Special Committee (Messrs N. C. Chatterjee and T. C. Ray dissenting) ran as follows:—

"That in view of the stringent financial situation, this Committee feel that none of the revision of grades, special increments within the grades, special or personal allowances or additional emoluments of any kind, extension of services as well as additional staff, etc., are justified, and they accordingly recommend a reversal to the original grades, pays, etc., as prevailing before the 13th March, 1940, with liberty to every individual employee or officer to bring up his case before the appropriate Committee during the year."

Mr. Hamoodur Rahman having moved for the acceptance of the Establishment Special Committee's resolution, *Mr. Debabrata Mookerjee* moved the amendment referred to above.

Mr. Satish Chandra Bose moved an amendment:—

"That in modification of the Special Committees's resolution the words 'as well as additional staff' be deleted and the revision of the grades of the bailiffs of the Collection Department be excluded from the recommendation of the Special Committee."

In moving his amendment Mr. Bose said that they had laid the axe on all employees but the bailiffs were the pivot of the Corporation and it was they who were responsible for the revenue income of the Corporation. They were to work under serious difficulties and against heavy odds. They deserved special consideration at the hands of the Corporation.

Mr. Mrigendra Kumar Mazumdar supported the amendment. He emphasised the onerous duties and heavy responsibilities of the bailiffs who, he said, richly deserved special treatment of the Corporation.

Mr. Hamoodur Rahman accepted the amendment moved by *Mr. Debabrata Mookerjee*.

Mr. Prafulla Kumar Dutta complained that the Committee had not gone through the matter carefully. Gross injustice had been done in some cases. There were certainly cases which demanded consideration on their merit. The expenditure of the Corporation could be reduced by curtailment in several directions. The hard lot of the poor employees should not be kept a sealed book on the plea of financial stringency.

Mr. Debendranath Mukherjee referred to the dissentient note of Mr. N. C. Chatterjee and Mr. T. C. Ray and said that revision of grades or special allowances at the present time was unthinkable. There had been, he pointed out, revision of grades four times within a year. He, however, agreed that the employees might be given a chance to represent their cases to the proper authorities if they were adversely affected. He also opined that the temporary staff appointed and working for over a year should not be retrenched.

Mr. T. C. Ray explained why he dissented from the recommendation of the Committee.

The Mayor (Mr. A. R. Siddiqi) intervening stated that as Chairman of this Committee he might be allowed to make his observations without affecting the decision of the House either way. He said that at the time when the Committee was appointed all sections of the House were terribly enthusiastic over the affair. But it seemed now that hearts of some members were being softened at the supposed difficulties of the men concerned. They could not stultify their position now by crying a halt. The question of bailiffs was thoroughly discussed at the Committee meeting and the decision was taken after a full-dress debate. If things were bad in 1939, it was equally bad in 1941.

Mr. Satis C. Bose's amendment excluding the bailiffs of the Corporation from the scope of the resolution of the Committee was put to the vote and was lost and the original motion as amended by *Mr. Debabrata Mookerjee* was accepted by the House.

Standing Committee Vacancies Filled Up

The vacancies in the *Estates and General Purposes Standing Committee* and the *Services Standing Committee No. II* caused by the resignation of Mr. J. H. Speller were filled up by the election of Mr. E. S. W. Haward who has been elected a Councillor in place of Mr. Speller by the Bengal Chamber of Commerce constituency. He was also elected to (*i*) the Burning Ghats Improvement Special Committee, (*ii*) the Harijan Special Committee, (*iii*) the Advisory Board for the Commercial Museum and Health Publicity Department and (*iv*) the License Appeals Bench.

Electoral Rolls for the Indian Legislative Assembly

The meeting considered a communication from the Additional Secretary, Government of Bengal, requesting the Corporation to undertake the preparation of fresh electoral rolls of all the constituencies in so far as Calcutta is concerned for the Indian Legislative Assembly, as on previous occasions and directed the Chief Executive Officer to take necessary steps in the matter.

"BLACK-OUT" SAVING

The all-night black-out in Calcutta on March 3 meant a saving of more than Rs. 1,500 to Calcutta Corporation in respect of the lighting of streets and public places in the city.

The Corporation incurs, for lighting, an annual expenditure of Rs. 5,45,000, namely Rs. 1,15,000 for electric lights and Rs. 4,30,000 for gas lights. There are about 6,571 electric and 19,249 gas posts to keep the city well-lit, burning annually about 4,000 and 3,963 hours, respectively.

Hospital Buildings

A set of draft rules for regulating the construction of and additions and alterations to hospital buildings in Calcutta framed by the Health Officer of the Corporation in collaboration with the Director of Public Health, Bengal was referred to the Public Health Standing Committee on the motion of Mr. M. A. H. Ispahani seconded by Mr. Muhammad Rafique.

S. S. HOGG MARKET

NOTICE

To all whom it may concern, that an application has been received from Mrs. Lachmi Tirathdas for the registration of the names of Murli and Lalchand represented by their mother and lawful guardian Mrs. Lachmi Tirathdas, as occupiers in respect of Stall No. 6 in Block "A" in the S. S. Hogg Market in place of their deceased father Mr. Tirathdas. Objections, if any, to this application should be submitted to the undersigned within 15 days from date hereof.

S. S. Hogg Market, A. QASIM,
The 12th March, 1941. Acting Superintendent.

AUCTION SALE

Messrs. Mackenzie Lyall and Co., will sell by public auction unserviceable stores of the Corporation at the Corporation Condemned Stores Yard, Entally, at 8 a.m. on Saturday, the 22nd March, 1941. All information in relation to the sale may be had from the undersigned.

149, Lower Circular Road, M. G. BANERJEE,
The 11th March, 1941. Controller of Stores.

General Article

Calcutta's Budget For 1941-42

As A Ratepayer Sees It

(II)

[By Nripendra Kumar Gupta]

(*Concluded From The Issue Of 8th March*, 1941.)

In my first article I have commented in some detail on the lack of sympathetic treatment of the Corporation by the Government of Bengal. There has not been any vissible trace of fairplay in all the dealings of the Government, because those who are at the helm of affairs, are not moved by broad considerations of an enlightened policy and have consistently failed to appreciate the special claims of a capital city on the revenues of the province. It is my submission that there are certain heads of expenditure which the Corporation has to incur in near future, to which handsome contribution from the Government should be forthcoming.

Internal Drainage

One such item is the huge expenditure on internal drainage which is already under construction. So far as the Cossipore, Chitpore and Manicktola areas are concerned, it is the duty of the Government to make adequate contributions. These areas were added to the Corporation by the new Act of 1923. The Corporation has already spent over a crore in improving these areas out of the revenues of the city proper. For instance, in the five official years 1935-36 to 1939-40, the contributions have amounted to Rs. 49,93,800. This has been met by drawing on the balances of the Corporation to the extent of Rs. 24,13,000. Not a pice towards the recurring deficits has been contributed by the Government. The Internal Drainage Scheme is a huge affair. Government has contributed liberally to such schemes in Dacca, Darjeeling and other places. Why should a different treatment be meted out to Calcutta? There is a precedent also. When the suburban areas were added to Calcutta in 1888, Government paid half the cost of the main drainage scheme.

Isolation Hospital

A big Isolation Hospital is a crying necessity. The capital and recurring expenditures are expected to be very large. Why should not Government contribute? Many of the epidemics in the city is due to the influx of the people of the mofussils during festivals and on some other occasions. Patients here hail from many of the outlying districts. It is only fair and just that Government should contribute. The existing hospital facilities are admittedly deficient. The Corporation is already contributing a sum of about Rs. 800,000 a year towards maintenance of the city's Hospitals. It cannot incur further expense.

Milk Supply

The question of the supply of pure milk in adequate quantities and at a rate within the means of citizens of average means is of paramount importance. The Corporation ought to start a model dairy of its own in order to set an example to enterprising firms and companies and thus lay the foundation of a well-organised system. But this requires a big initial outlay and heavy recurring expense. Is it not the duty of the Government to come to the aid of the Corporation? Government can at least acquire at their own expense say 800 *bighas* of land within easy reach of Calcutta and lease out the same to the Corporatoin at nominal rent. They should also make provisions in the Calcutta Municipal Act authorising the Corporation to operate dairies outside the city and to control private dairies supplying milk to the city.

Rehousing Schemes

The Corporation should tackle in right earnest the question of rehousing the poorer classes of the city on modern sanitary plans. It is a big affair. In England Borough Councils and County Councils have done a lot, but they have had the advantage of Government help. In Delhi, Government have decided to set apart the proceeds of the amusement tax for the purpose. Why should not the Government of Bengal make a recurring and handsome contribution out of the proceeds of the amusement tax collected within the municipal limits of Calcutta? The contribution can then be capitalised and a real start made for the amelioration of the conditions of the poor who live in horribly insanitary *bustees* and in the midst of indescribable filth.

Mosquito Control

Under the present system of mosquito control it is idle to expect better results unless a much wider area comes within the scheme. All the outlying municipal areas—such as Baranagore, South and North Dum Dum, Tollygunge, Garden Reach and South Suburban—must be included under one comprehensive scheme if really satisfactory results are to be brought about. A metropolitan Board of Control should be formed in which Corporation and the above municipalities are to be represented and to be contributing according to their power. The Government should provide the supervising personnel consisting of real and experienced experts and the Ministry of Self-Government exercise supreme control over the Board. Systematic and scientific war must be carried on against disease-carrying mosquitos of all types. Stagnant and insanitary pools, *dobas* and hollows should be filled up. This will require legislation but I hope my suggestion will receive the attention it deserves.

Improvement Schemes

Regard being had to the extraordinary conditions due to the war, the Corporation should shelve for the present all except the most urgent improve-

SMALL-POX IN CALCUTTA:
HAVE YOU TAKEN THE "SAFETY" MARK?

ment schemes. Our city fathers should concentrate for the present on the internal and external drainage schemes and water supply. These are the two most urgent necessities and must have precedence over all schemes for the purpose of improving the sanitation of the city. Schemes of local amelioration should not be pressed for expect only these which can no longer be postponed. It is apt to be overlooked that the Corporation contributes Rs. 20 lakhs a year to the coffers of the Calcutta Improvement Trust, and thereby helps that body to carry out many a work of major improvements in the various parts of the city.

Repatriation Of Sterling Loan

There is a 6 per cent. loan of £500,000 repayable on 1st March, 1953. It may be possible through the Reserve Bank to repatriate this loan, if Government of India are approached. The British Government is anxious to add to its exchange resources and may readily consent. It will be possible to replace this heavy interest-bearing loan with a 3½ per cent. rupee loan in Calcutta. At 1*s.* 6*d.* £500,000 is worth about Rs. 66·7 lakhs. A saving of 1½ per cent. in interest would mean a saving of over a lakh of rupees per year.

Over-Budgetting

It is to be regretted that although there has been very serious discrepancy between the estimated expenditure and actuals consistently over a number of successive years, no steps have yet been taken to ensure a greater accuracy in estimates. In 1941-42, however, for the first time, some attempt appears to have been made to obtain a greater accuracy. The estimated Revenue income is Rs. 258,49,900 and expenditure Rs. 259,26,100—revealing a small deficit of Rs. 76,000. Over-budgetting is very objectionable as it tends to create a scare, and also lowers the financial position of the Corporation itself in the eye of the public.

Conclusion

The Bengal Government has at last sanctioned Manicktola Scheme No. IV and Manicktola Scheme No. IV (Supplementary) schemes. The Calcutta Improvement Trust has also recently adopted Scheme No. V Manicktola (Upper Circular Road to Ultadanga Main Road). So the improvement of Manicktola is seriously under way. The construction of the S. W. and D. W. F. Pump Houses in Dhappa Lock Pumping Station has to be pushed through at top-speed. The improvement of Manicktola will help to bridge over the annual recurring deficits between receipts and expenditure as the value of land will greatly increase and the assessment of new modern buildings and structures which will crop up at a rapid rate will easily inflate the actual income for this area. I shall now cry a halt, and finish my article with a word of congratulation for the Councillors and the Staff on a year of solid work well done.

General Article

Town Free From Beggar Nuisance

Kottayam's Unique Achievement

A TOWN free from the beggar nuisance—that is the claim of Kottayam, Travancore. Sounds rather astounding, doesn't? But it is true and what is more, Kottayam is perhaps the only town in the whole of India to have achieved this unique distinction. In the streets of that town, you neither meet beggars on the road nor hear their piteous wails.

This happy state of affairs has been brought about by the Municipal Council with the willing co-operation of the citizens. What has been done in Kottayam it should be possible to do in other towns and cities as well not only for the benefit of the maimed and the aged but also to the lasting good of the citizens themselves. We give below the details of the Kottayam Beggar Relief Scheme in the hope that it will serve as an inspiring model for others to follow.

About a decade and a half back when Mr. P. T. Thomas was President of the Municipal Council, a scheme to help deserving beggars came up for consideration. The central idea was to establish a Poor Home. But, unfortunately, the plan failed to materialise. The present scheme came in for discussion before the Kottayam Municipal Council about eighteen months back. The council resolved that the President and a few members in council in co-operation with the citizens of the locality, should meet, form a Committee and draw up a practical scheme which would not only give adequate relief to the beggars but would also serve to save citizens of Kottayam from the beggar nuisance as was actually experienced.

The resolution was immediately acted upon. The Committee resolved upon by the council was formed. This body was of the unanimous opinion that the solution they should arrive at must not only minimise evils, but be good, sound and practical also. They felt that charity in India was, more often than not, misguided. They felt too that if they were to show a better record in the matter of ministering to the needs of the helpless and the indigent, a more enlightened orientation was necessary. They likewise expressed the opinion, that if all amounts expended in the name of charity in the Kottayam town were allowed to be directed towards a well-organised charitable institution, run by responsible people, the beggar problem of the town could be solved in the right manner. These

SMALL-POX: YOU NEED NOT GET IT AT ALL
GET YOURSELF VACCINATED

considerations required that the Committee should make a scientific approach to the problem. And the approach they made was thoroughly scientific.

The field of investigation was wide, but that did not deter the members. They had before them that big army of unfortunates who were infirm, and the large number with infectious diseases, as against that not inconsiderable number who, by force of adverse circumstances, had degenerated into a state of penury and those who accepted beggary as a life-work. Thus, the Committee was faced with the necessity of making a suitable selection of the deserving from among these groups, at the same time bearing in mind the fact that only the poor and the deserving of the Kottayam town could claim charity from Kottayam citizens. Even shorn of these complications, a solution was difficult, but with the complex issues involved, the difficulties increased.

But the enthusiasm and the spirit of service of the members were not damped by these difficulties. On the other hand, the reaction of these obstacles on them was greater fervour and greater determination. The first thing they did was the compilation of a comprehensive census of beggars of the Kottayam Municipal Town. With this valuable data as background, they presented brass badges to those beggars, who, in their considered opinion, were deserving of charity. To the beggar so adorned the badge was to be his symbol for recognition as deserving of help; to the public it was to be an emblem of the wide humanitarian work about to be started.

With the invaluable data collected through their exhaustive investigation, and the census compiled, the Committee knew where they actually stood. Their next move was to ascertain how far the citizens of Kottayam were with them in this philanthropic venture, and how much or how little co-operation they could expect from the public. With this end in view, they issued an appeal to the public, describing the urgent necessity of giving succour to the beggars and of relieving themselves from the beggar nuisance. The response to this appeal was neither slow nor niggardly. Representative citizens donated Rs. 100 and more each, and became patrons of the scheme. It deserves special mention that Sachivottama Sir C. P. Ramaswamy Aiyar is one of these patrons. Further, a good number of citizens extended their hearty co-operation by donating Rs. 5 each and becoming members. This brought in about Rs. 3,000. And the public meeting held in this connection and presided over by the Sachivottama added momentum to the popular enthusiasm.

His words of encouragement, appreciation and advice bear repetition. In the course of his address, he said :—

"I congratulate Kottayam on having given a very fine lead indeed to the State and the country at large. Going through the report, I was struck by the amount of organisation and the amount of businesslike efficiency that characterised the document. It shows that you have proceeded on the right lines.....As I have always stated on occasions like this, my experience has been that institutions like this, started perhaps with inadequate or insufficient financial resources, nevertheless prosper in so far as and to the extent to which they are able to command and obtain the services of zealous and businesslike people. I have very rarely known a good movement dying for want of money. I have known many movements dying for want of men....."

In the meantime the Committee decided that, to give further stimulus to the work as also to make the participation of the wider public in the scheme possible, a "Beggar Day" should be celebrated. The 27th and 28th of July 1940 were fixed for the function. A huge procession was organised by way of inauguration of the Day. Officials and non-officials vied with each other to co-operate with the sponsors of the scheme, thus offering conclusive proof that their hearts beat in unison. 600 volunteers, mostly students, and drawn from all communities marched singing songs specially composed for the occasion. Begging parties of twos and threes, led by representative officials and non-officials, as the Division Peishkar, the Municipal President, Mr. K. K. Kuruvilla, District Health Officer, District Medical Officer, Municipal Councillors, etc., were formed to visit each and every house in the town and to collect voluntary contribution for the Beggar Relief Fund.

The Begging parties visited 3,800 houses and collected about Rs. 1,200. In other words, on an average, every three houses contributed a rupee.

The construction of the necessary buildings began immediately. They spent Rs. 2,000 and made a spacious dining room, an office room and a convenient kitchen.

The first of Chingom 1116 (August 16, 1940) is a memorable day in the annals of Kottayam. This day saw the opening of what, in the opinion of Sree K. P. S. Menon, Dewan of Bharatpur, was a "unique institution not only in Travancore but probably in India."

It is now barely six months since the scheme began to work. To-day 175 beggars are fed twice daily. Clothing too is provided for them. Apart from this, 25 children of the beggars are fed and educated in the Nursery School attached to the Relief Centre. The members of the Committee of the Poor pay regular visits to the houses of beggars and do what is possible to ensure them comfort. The members of the Women's Committee shoulder the responsibility of looking after the feeding and the education of the children of the beggars. Provision is made for the manufacture of screwpine mats, baskets, brooms, etc.

Apart from this, the land adjoining the premises is taken on lease to begin vegetable gardening. The inmates of the asylum take a lively interest in this work. In the Kottayam Municipal Town, no beggars are seen to-day. The practice of door to door begging, so common in other towns, is conspicuous by its absence here. It requires about Rs. 500 a month to meet the expenses of feeding and clothing the beggars. The response the Committee received in the past was encouraging to the highest degree. They go forward with this great work, fully hoping and sincerely believing that the sympathy and co-operation of the public in the matter will continue.

No. 1 THE INSTALLATION

The Installation is the foundation on which Burmah-Shell's elaborate and extremely wide spread organisation of Kerosene distribution is built.

Here vast quantities of Kerosene are stored and packed. Each of these operations calls for specialised treatment, and at all of their Installations Burmah-Shell employ a large staff of Engineers and labour in order to guarantee that the public throughout the length and breadth of India obtain Kerosene of standard quality and of full measure.

Happiness For Health

[By Dr. Frances Upton]

"HAPPINESS for Health." Perhaps it sounds too easy; you feel there must be a catch somewhere? Perhaps you associate the cult of health with grim-faced endurance and gloomy rigid self-discipline—no jolly parties, no "tearts", no fun, occasional [illegible] in the amenities of life. Well, if you do, you've got things badly out of focus.

Some of the healthiest people I know are the happiest; they have the capacity for enjoying the good things of life, and of not worrying over trifles. Of course, only stupid persons would disregard the laws of health to the extent of poisoning their bodies with wrong feeding and faulty elimination, by starving them of sleep and rest and good food and fresh air and exercise.

PEOPLE DIED

OF

SMALL-POX

during the week ending March 8, 1941

Get Yourself Vaccinated

But one must not forget that there are psychological ailments as well as physical ailments; and one's attitude to life in general has a profound influence on health.

Lots of people are the slaves of their emotions. For instance, there are the worries; they worry about trifles as well as about the big things of life: they go more than half-way to meet trouble and if, as often happens, the trouble fails to materialise, they look round apprehensively for something else to worry about.

[illegible] people are depressing to all around them, they cast a gloom which rightly makes them thoroughly unpopular. Their worry habit injures their health too; it slows up digestion and assimilation of food (most worriers are thin to gauntness), it embitters the circulation, it [illegible] sleep and tones the nerves. It [illegible]

But happiness is the finest tonic in the world, isn't it better to make a habit of happiness?

Few people realise what a powerful effect emotions have on health, for good or for ill. The influence of mind on body can give amazing results. Hypnotists have raised blisters on the skin by applying a piece of stamp paper and telling the subject of the experiment that it was blistering plaster. In certain native races, perfectly healthy individuals who decide that they don't want to live any longer just lie down and die within a few hours.

People have died from fright, too. The last great European War produced hundreds of cases of physical disablements, not from physical wounds, but from mental wounds—sick minds suffering from fear, horror, worry, and other distressing emotions. A fit of anger will flood the body with poisons; for instance, a mother can poison her breast milk by giving way to violent temper, and so cause convulsions in her baby.

Food eaten when one is worried, angry, or unhappy just stagnates and ferments in the stomach, causing symptoms of indigestion, because the mental distress stops the flow of the digestive juices and the churning movements of the stomach walls. There is no doubt that unhappiness due to fear, anger, worry, jealousy, discontent, and other painful emotions can work havoc in human lives.

We can to a great extent control our emotions; we can make a habit of happiness. If you find yourself worrying over trifles, letting troubles get you down, nursing grievances, looking on the dark side of life, it is high time to take yourself in hand.

If you find yourself getting all hot and bothered or annoyed about something, ask yourself if it is really so important as to justify your [illegible] your health by indulging in distressing emotions. Real troubles come the way of most of us, but it is our attitude to them that determines their effect on us. If anything can be done to put things right, we should get busy; just worrying or getting peeved or miserable won't help—on the contrary, we make ourselves less able to cope with the situation. It's much wiser to count your blessings than to dwell on your misfortunes, and you should firmly switch your mind off gloomy thoughts.

The scheme for happiness includes a healthy body, for our minds are affected by physical health. Some people are pessimists because they are ill-nourished or anaemic or suffering from lack of fresh air and exercise. Faulty elimination or any other source of self-poisoning can make people mor-

bid and depressed. We must not expect a healthy mind in a sick body.

There are various ways of brightening our lives. Many find great happiness in social work, caring for the sick and helpless, aiding those less fortunate than themselves. Others find contentment in literature, art, music, and hobbies, or a congenial career in sport and games and happy friendships.

Enthusiasms for one's job and a determination to do it well can bring immense satisfaction. The lesser things of life count, too. Attractive clothes, well-groomed hair, and well-kept hands may bring happiness through added confidence and self-respect.

Don't despise physical comforts. A refreshing bath, hunger satisfied with a good meal, a comfortable chair by the open windows—such things all help to make life more agreeable. Being cold, or wearing uncomfortable shoes, can colour one's mental outlook and make one depressed and irritable.

You must organise your life for happiness; it won't just happen to you. Avoid gloomy companions— the sort who are "never happy unless they are miserable" and don't let your mind dwell on the dark side of life. When you are tired after your day's work, it's foolish to depress yourself by reading pessimistic prophecies of coming world wars and economic distress; far better to go to a cheerful film or play or to read an amusing novel.

If you are lonely, do something about it; join a social or sports club or find some other way of meeting congenial people and of making friends. Never let yourself get bored with life; life is full of interests if you will only seek them.

Determine to face up to life cheerfully. Hold up your head, brace up your shoulders and spine, and don't be afraid to smile.

Sewerage—From Antiquity To Modern Times

[By Harold F. Gray, *Consulting Engineer, Berkeley U. S. A.*]

History shows that, in Assyria, Babylon and other countries in that part of the world, sanitation had reached a development in 2500 B.C. that might shame our modern towns of similar size. The people had well-built and commodious houses and baths, with drainage systems of well-burned brick. In the lower levels of excavations in those sections, where earlier cities had once existed, the degree of comfort and luxury appears to be even better than in the uppermost levels where more recent cities existed. Bathrooms and latrines were quite common in these earlier cities, and the terracotta pipes found are still in good condition after nearly 5,000 years. Roof drainage and waste removal were also in evidence.

Drains were about two feet below the street, and many homes had individual wells within the buildings. Rubbish was placed in walled pits, about 5 meters in diameter and probably cleaned out when necessary.

The well-known Roman sewer, the Cloaca Maxima, was a conduit for the removal of rain water and underground drainage, and was not expected to receive sewage. In London of mediaeval times, the sewage problem was probably worse than in the early cities of Asia as above mentioned, due in part to the overcrowded population. In 1580 A.D., there were 3 privies for each 85 persons. Such conditions were the cause of such diseases as the plague. Until 1815 no water but kitchen slops was permitted to be discharged into the drains, and this law persisted in Paris until 1880.

MAINTENANCE METHODS AND PROBLEMS

[By Bryan F. Brown, *Assistant Superintendent of Sewers, Los Angeles, California*]

In Los Angeles the closest co-operation between the Division of Design, Construction and Maintenance is necessary for the highest efficiency desired in the sewerage system. To obtain this condition, daily uniform sanitation records must be kept. These records show what work was performed, and the equipment and material used.

The Maintenance Division has in charge the inspection of 2,850 miles of sewers, 630 miles of drains, 19 pumping plants, 11,600 flushing structures, 26,200 catch basins, 630 culverts, and the Hyperion sewage screening plant.

The personnel in this Division consists of 184 persons, subject to 24 hour per day service when needed, due to emergency work during storms, or pipeline stoppages, or plant failure. This maintenance is the protection given an investment by the people of this city over a period of years of about 65 million dollars, there being about 1,500,000 persons served by this system at the present time.

In the planned maintenance program, systematic inspection and cleaning are essential. The entire sewer system is gone over every six months.

In cleaning of conduits, both hand and machine methods are used, electric power being employed for ventilation. All automotive equipment used has been operated on the average of 212,000 miles per year at a cost of about 4 cents per mile.

To remedy complaints of noisy and loose manhole covers, hot tar application is used. There are about 70,000 manhole covers of all types. In 1939, 1,833 noisy covers were remedied at an average cost of $1·58 per cover. The total cost of the inspection, cleaning, and replacing of sewer lines in service for the past year was $20·06 per mile, and that of storm drain was $71·62 per mile.

To prevent explosions in the sewer, a gas survey is made of 5,000 manholes per month, which just about covers the entire city in each year. Safety measures and instructions are issued to all maintenance employees in regard to explosive hazards and ventilation.

Fred D. Bowlus of the Los Angeles County Sanitation District showed that there are now 200 miles of trunk line sewers with diameters varying from 8 inches to 10½ feet in the control of the Districts. Feeding into the system are over 5000 miles of sewers maintained by Los Angeles County and 750 miles of local lines, serving 23 incorporated cities. The total flow in the system is estimated to reach 30 MGD by the end of 1940. Every mile of the District system is cleaned at least once each year, and some more often. The field cost of cleaning 55 miles of sewer in 1940 amounted to $80 per mile.

CALCUTTA NEWS & VIEWS A Digest

CALCUTTA UNIVERSITY CONVOCATION

The part that Indian Universities can play in bringing about a synthesis of different cultures and evolving "that common culture which should be the highest aim of Indian nationalism to achieve." was emphasized by Sir Tej Bahadur Sapru when he addressed the annual Convocation of the Calcutta University.

"Is it altogether a vain hope," he asked, "that our universities may come to our rescue when our politicians have failed us and that out of the chaos of ideas and aspirations it may be given to the universities to evolve a cosmos of clear thinking and generous feeling?

The Convocation was held in a spacious pandal in the grounds of the Science College, on Upper Circular Road. Over 5,000 graduates of the University were admitted to their respective degrees.

Prominent among those who were honoured by the University were Sir Nilratan Sircar and Mr. Hirendra Nath Datta. Sir Nilratan, who has been long associated with the University and a former Vice-Chancellor, was admitted to the Honorary Degree of Doctor of Science, and Mr. Datta was awarded the Kamala Gold Medal.

"I respectfully suggest to University men that it is their duty to think coolly and calmly and to direct their energies to the working out of a synthesis of the common ideas of a nationhood, although the siren voices of discord may be forcing themselves upon our ears to allure us to stagnation, if not ruin," said Sir Tej Bahadur Sapru in the course of his address.

"I read it in the message and prophecy of a future in which, when the dust and din of the present-day controversies, which divide man from man and community from community, will have disappeared, each one of us will be able truthfully to say that India is neither my heritage nor yours but a common heritage," said Sir Tej.

This is the ideal he set up for Universities: "They can be a focus and centre for the sythesis of different cultures and for the evolution of that common culture which should be the highest aim of Indian nationalism to achieve, if the phrase is not merely an empty phrase or a deceptive slogan."

Sir Tej Bahadur paid a glowing tribute to the achievements of Calcutta University and said, "I am free to confess that the debt we owe to Bengal is by no means inconsiderable and it is certainly greater than that we owe to any other province or any other University in India."

GYNAECOLOGICAL CONGRESS

The 3rd All-India Obstetric and Gynaecological Congress will be held at the Medical College, Calcutta, during the Easter Holidays (10th to 14th April, 1941) under the auspices of the Bengal Obstetric and Gynaecological Society. One of the main objects of the Congress is to unite the whole obstetric profession in India in a body to achieve the status and exert influence as it is in other countries of the world. It is expected that many eminent medical men from all over India will attend the Congress and take part in the discussion.

MUSLIM CHAMBER OF COMMERCE

Mr. Abdur Rahman Siddiqi, Mayor of Calcutta, has been elected President and Mr. M. A. Aziz Khan, Mr. S. M. Nauman, Mr. Mohamed Rafique and Khan Bahadur G. A. Dossani, Vice-Presidents of the Muslim Chamber of Commerce for 1941.

The members of the new Committee are:—Sir Adamjee Hajee Dawood, Mr. Omer A. Suttar, Mr. Haji Vali Mohamed Kasam Dada, Mr. M. K. Khaleeli, Mr. Md. Shariff, Mr. Ferozuddin, Mr. M. A. H. Ispahani (outgoing President), Sir Abdul Halim Ghuznavi, Mr. F. S. Abdul Kader, Mr. Kassim, A. Mohmed, Mr. Adam Osmani, Mr. Noor Mohamed Elias, Mr. M. S. Vawda and Mr. Issa Haji Dawood.

FIRST MAYOR'S BUST

Nearing Completion For Shahnagore Memorial

The marble bust of the late Mr. C. R. Das, to be presented by Mr. Abdur Rahman Siddiqi, Mayor of Calcutta, for being placed at the Deshabandhu Musoleum at Shahnagore Burning Ghat, is nearing completion.

The Mayor, Mr. A. R. Siddiqi, accompanied, by the Chief Executive Officer of the Calcutta Corporation, Mr. J. C. Mukerjea inspected the bust, now under execution by the sculptor, Mr. K. C. Roy, at his studio at British Indian Street, on Saturday last and approved of the work so far executed.

EARLIER OFFICE HOURS

The advisability of starting office hours earlier so that employees may get home before it is dark, was, it is understood, discussed at a meeting of the representatives of all the chambers of commerce at the office of the Bengal Chamber of Commerce, Calcutta, on Thursday last.

Besides representatives of the Bengal Chamber of Commerce, Sir Badridas Goenka (Indian Chamber of Commerce), Sir Hari Sanker Paul (Bengal National Chamber of Commerce), Mr. M. A. Aziz Khan (Moslem Chamber of Commerce), and Mr. M. R. Jaipuria Marwari Chamber of Commerce) attended the Conference.

GOVERNMENT AND CITY EPIDEMICS

The Government of Bengal have, it is learnt, expressed their great concern at the recent deterioration of the health of Calcutta in respect of certain

VACCINATION IS A SIMPLE OPERATION
WHY SHOULD YOU FEAR IT?

diseases, such as small-pox and cholera, in a letter addressed by them to Calcutta Corporation.

While offering the Corporation their full co-operation, if it is needed, in coping with small-pox and cholera, which have now broken out in the City in an epidemic form, the Government have inquired as to what measures the Corporation has taken to check the diseases.

During the week ended March 8, there were 316 attacks and 286 deaths from small-pox and 73 attacks and 26 deaths from cholera.

CALCUTTA TO HAVE NEW MINT

For the construction of a new mint at Calcutta the Committee approved of an expenditure of Rs. 64,50,000 (non-recurrent). Owing to the increased demand for coinage caused by the war, a heavy strain has been placed on the existing mints at Bombay and Calcutta and the extension of plant capacity is accordingly required. The new mint, which is to be built on a site to be leased from the Calcutta Port Commissioners, would in the first instance be for silver coinage only. It will have a normal capacity of Rs. 6,00,000 per day or approximately double the amount working full overtime.

It is proposed to close down the existing mint when the situation returns to normal and to extend the new mint for the production of nickel, bronze and silver coins. The value of the site of the existing mint is very considerable and, when it is disposed of after the mint is closed down, it is expected it will pay for most, if not all, the expenditure now proposed.

THE CENSUS AND THE MUSLIMS

At a largely-attended meeting on Sunday last held at Town Hall under the presidency of Moulana Akram Khan, M.L.C., (Coalition), it was declared that the returns of the present census would be 'absolutely unacceptable to the Muslims' as the census organizations in Bengal had been exploited by the Hindu Mahasabha and the Congress' to undermine the Communal Award and the Poona Pact.

The meeting demanded that the Government of India, in consultation with the Government of Bengal should institute an inquiry into the 'irregularities' of the census operation in Bengal and should take proper steps to rectify the wrongs, declare the present Bengal census null and void and order a fresh census by joint supervisors and enumerators, or in the alternative should accept the census returns of 1931 as the only acceptable basis for any practical purposes.

By another resolution the meeting expressed its confidence in the leadership of the Premier of Bengal, Mr. A. K. Fazlul Huq, and characterised the "cry of a section of the Mahasabhite the High Caste Hindu capitalists against Mr. Fazlul Huq" as a device to cover their 'sins and offences' against census operation.

Among those present and addressed the meeting were :—Khan Bahadur Bashim Ali Khan, M.L.A., Maulvi S. M. Osman, Syed Badruddoja, M.L.A., Mozambmul Huq, M.L.A, Mr. G. P. Sarkar, Maulvi Abdul Waheb Khan, M.L.A., Moulana Abdur Razzaq, M.L.A., Maulvi Abdul Karim, M.L.A., Maulvi Hasem Ali Khan, M.L.A., Mahomed Rafique, Councillor, Calcutta Corporation and several representatives of the *Adibasis*.

CASE AGAINST PREMIER

On the petition of complaint of Mr. Phanindra Nath Mookerjee, Advocate, practising in the Calcutta Police Courts, against the Hon'ble Mr. A. K. Fazlul Huq, Premier of Bengal, on a charge of defamation, Mr. R. Gupta, Chief Presidency Magistrate, Calcutta, issued a notice on Saturday last on Mr. Huq to show cause, either personally or through a lawyer, why a precess under Section 500 I.P.C. (Defamation) should not be issued against him.

The hearing of the case was adjourned till March 17.

Mr. Mookerjee stated in his petition that Mr. Huq had made a statement on March 2, in his private capacity as a member of the Moslem League making certain allegations against Hindu lawyers, professors etc., of Bengal in connection with the census operations in Bengal. The statement was published in Calcutta newspapers and the petitioner submitted that the statement was 'deliberately made to offend and insult the lawyers of Bengal as a class' and was equally applicable to the petitioner as well. The petitioner further submitted that the statement was highly defamatory and was likely to lower him as a lawyer in the estimation of the public.

Mr. N. G. Sandell, Advocate, appointed for the petitioner.

The date for showing cause by Mr. A. K. Fazlul Huq, Premier of Bengal, on the petition of complaint of Mr. P. N. Mookerjee, which was fixed for March 17, has been altered to March, 22, by Mr. R. Gupta, Chief Presidency Magistrate, on the prayer of the petitioner in order to enable his counsel, Mr S. N. Banerjee (Sr.), to appear on his behalf.

GOVERNOR'S CONFERENCE

His Excellency the Governor presided on Monday last at an informal Conference of representatives of the Parties in the Legislature.

A general discussion took place on the political situation with particular reference to the deterioration in communal relations.

The Leaders' Conference at Government House met on Monday at 11-30 a.m. and continued till 1 p.m.

Those present were :—Mr. A. K. Fazlul Huq, (Chief Minister), Mr. H. S. Suhrawardy, Sir B. P. Sinha Roy, Maharaja Sris Chandra Nundy of Cossimbazar and Mr. M. B. Mullick (Ministers), Mr. K. Sahabuddin (Chief Whip of the Government), Mr. Sarat Chandra Bose, Mr. Kiran Shankar Roy and Mr. Kamini Kumar Dutta (Congress Paliamentary Party), Mr. Jatindra Nath Basu and Mr. Nalini Ranjan Sirkar (Independent Hindu

FEW PRICKS CAN SAVE YOU FROM SMALL-POX
GET THEM IN TIME

Nationalist Party), Mr. Shamsuddin Ahmed (Krishak-Proja Parliamentary Party) and Mr. Hem Chandra Nasker (Independent Scheduled Caste Party).

The Conference met again at Government House, Calcutta, on Tuesday morning. A frank discussion and interchange of views took place, and the Conference adjourned until next week in order to obtain certain detailed information on the subjects discussed.

The members of the Conference appealed to both Hindus and Mahomedans to refrain from any action which might tend to embitter communal feeling.

MR. SUBHAS BOSE'S PROPERTIES

Attachment Order On "Mahajati Sadan"

On Wednesday last Khan Bahadur Wali-Ul-Islam, Additional Chief Presidency Magistrate, Calcutta, passed orders of attachment of the properties of Mr. Subhas Chandra Bose on an application of the Police submitted previously in the case in which Mr. Subhas Chandra Bose was charged under the Defence of India Rules in connection with a speech delivered by him at a public meeting at Mohamed Ali Park alleged to have contained prejudicial report and also for the publication of an article entitled "The Day of Reckoning" in the *Forward Bloc* of which he was the Editor.

The Police as directed by the Magistrate previously submitted an application furnishing particulars of the properties of Mr. Bose and prayed for attachment of the same.

The following is the full text of the order :—

"Attach the immovable properties of the accused as detailed in the petition. The attachment order in respect of one-fourth share of 38/2, Elgin Road shall be issued through the Collector of 24-Parganas and will be subject to any encumbrances made. The Collector of 24-Parganas is appointed Receiver under Section 88 Clause 4 (F) of the Cr. P. C.

The attachment order in respect of the lease hold right of 166, Chittaranjan Avenue and the structure thereon shall be served by the local police. The Chief Executive Officer, Calcutta Corporation, is appointed Receiver under Section 88, Clause (4) (F) of the Cr. P. Code. Put up on 26th April, 1941."

His Excellency the Governor presided and the following members were present :—

Mr. A. K. Fazlul Huq, Mr. H. S. Suhrawardy, Sir B. P. Singh Roy, The Nawab Bahadur of Dacca, the Maharaja of Cossimbazar, Mr. K. Shahabuddin, Mr. Sarat Chandra Bose, Mr. Kiron Shankar Roy, Mr. Kamini Kumar Dutta, Mr. Hem Chandra Nasker, Mr. Jatindra Nath Basu, Mr. Nalini Ranjan Sarker and Mr. Shamsuddin Ahmed.

HINDU TEMPLES

An exhibition of photographs by Raymond Burnier, sponsored by the Indian Society of Oriental Art, was opened by Sir Sarvapalli Radhakrishnan at the Dalhousie Institute on Monday.

The photographs—there are about 100 of them—illustrate the remarkable examples of Indian sculpture and architecture found in the Hindu temples of this country. The artist has captured the beauty of intricate design and minute detail in the exquisite masonry work of the shrines. There is a fine blending of light and shade. The pictures display a wealth of talent.

"Temples have played a very important part in stimulating the religious consciousness of the Hindu community and individual as also national fellowship," observed Sir Sarvapalli Radhakrishnan, while opening the Exhibition.

Sir Sarvapalli referred to the old and modern forms of civilisation and compared them with the Hindu civilisation. The main emphasis of Hinduism was on religion, not merely as a side show or an auxiliary but as the only dominant feature. In music, literature, art and drama, everywhere, the predominant emphasis was always on religion. In Hinduism a man would consider himself great not by becoming dictator or a great despot, but if he were able to commune with the Infinite as fulfilling his destiny.

Referring to the temples as some concrete symbols in awakening religious consciousness, Sir Sarvapalli said that the aim of every Hindu was to get at the Supreme presence. But until that ultimate goal was reached some concrete symbols were required which made a definite appeal to different senses of the human mind. So by sounds, pictures, hymns and songs the religious consciousness was awakened. That was the purpose which these temples had served.

—Maintenance Methods And Problems

(*Continued from page* 598)

The flushing of trunk sewers has reduced the sulfide content in the flow during storms, but this content was restored after a few days in some lines. Periodic flushing where sulfides are noted will aid the control.

Hydrogen sulfide gas in the sewer air, where there is a vertical drop in the invert, has amounted to 20 ppm. At one manhole where a lateral with 3 to 5 ppm. of dissolved sulfides dropped into a trunk sewer, with none, this hydrogen sulfide content in the air was 60 ppm. at that manhole, but only 20 ppm. in a structure 100 feet distant. Maintenance crews often work in sewers with a content of 10 to 20 ppm. of hydrogen sulfide. 200 ppm. content is tolerable, but a 500 ppm. content is noticeable and likely to produce distress. A peak content of 100 ppm. has been noted in the District system and in the Los Angeles North Outfall.

(*To be concluded*)

MR. B. T. GHATAK

B. N. Chambers' Representative On Board Of Communications

The Committee of the Bengal National Chamber of Commerce have re-nominated Mr. B. T. Ghatak (of Messrs. K. C. Ghatak and Sons Ltd.) as the representative of the Chamber on the Provincial Board of Communications Bengal, for the year 1941-42.

SUBURBAN READING CLUB

53rd Annual General Meeting

The annual general meeting of the Suburban Reading Club was held at the Club premises on Sunday, the 2nd March, 1941.

The annual report presented by the Honorary Secretary recorded an all round progress achieved in the year under review. Notable among others is the administration of the Gopala Krishna Mukherjee Memorial Free Studentship Fund created by the donation of an *ex*-Secretary of the Club, from the interests of which deserving and meritorious boys and girls irrespective of caste and creed are helped to prosecute their studies in the local schools.

The following office-bearers and members of Executive Committee were then elected for the year 1941 :—

President :—Ambuj Kumar Chatterjee. *Vice-Presidents* :—Pandit Harish Chandra Chakraburty, Messrs. Aswini Kumar Ghosh, Bidhu Bhushan Sarkar, (Councillor), Hem Chandra Naskar, (Councillor), and Upendra Nath Das. *Secretary* :—Mr. Khagendra Kumar Ghosh. *Assistant Secretaries* :—Messrs. Jiban Krishna Banerjee, and Grindra Nath Ghosh, *Librarian* :—Mr. Nitish Kumar Basu. *Assistant Librarians* :—Messrs. Ajit Roy Choudhury and Sunil Kumar Sarkar. *Treasurer* :—Mr. Hari Gopal Ghose. *Accountant* :—Mr. Narendra Nath Mukherjee. *Auditors* :—Messrs. Nripendra Nath Biswas and Sachindra Kumar Basu. *Members of the Executive Committee* :—Dr. S. K. Basu, Messrs. Panchanan Bhattacharyya, Kriparam Sen Gupta, Rabindra Nath Basu, Sachindra Nath Ghosh, Narendra Nath Ghosh, Nirmal Chatterji, Sadasiv Banerjee, Ashutosh Chatterjee, Anil Kumar Sarkar, Akshoy Kumar Banerjee, Krishna Basu, Satya Charan Das, Harendra Nath Basu, Sudhir Kumar Mukherjee and the Chief Executive Officer, Calcutta Corporation.

INDIAN ART IN INDUSTRY

Successful Exhibition At Calcutta

The Art in Industry Exhibition in Calcutta which was open to the public from February 27 to March 8 attracted more than 2,000 entries from all over India, of which 370 were hung.

The object of the sponsors, Burmah-Shell, was to show that Indian Art is eminently suitable for conveying the messages of Indian industry. And all who saw the Exhibition are agreed that it achieved its object admirably.

The Outdoor Section produced a very large number of attractive posters and of a high general standard; the Lettering Section contained several exhibits of first rate quality, while there was a pleasing variety in the Decorative Art Section. Innumerable *sari* border and curtain and carpet designs were submitted in the Textile Industry Section, while printed tin and match box labels and various kinds of box designs were entered in the Package Design Section. There were comparatively few entries by children in the Juvenile Section and the standard should have been higher.

In each section there were big money prizes given by six progressive organizations—The Dunlop Rubber Co., (India) Ltd., the *Ananda Bazar Patrika* and the *Hindusthan Standard*, the Indian Tea Market Expansion Board, the Mahalaxmi Cotton Mills Ltd., the Metal Box Company of India Ltd., and the Tata Iron and Steel Co., Ltd. The sponsors, Burmah-Shell, gave in addition a prize of Rs. 500 for the best exhibit and that well-known patron of Art, Mr. Bhabani Churn Law, another prize of Rs. 500 for the best entry from Bengal.

The Art in Industry Exhibition excited a great deal of public interest and it is proposed to hold one every year.

JAUNBAZAR INSTITUTE

Office-Bearers For 1940-41

At a special general meeting held in the Institute premises under the presidentship of Mr. Nalin Behary Ghosh, the following office-bearers were duly elected for the year 1940-41 :—

President :—Dr. B. Mitra, F.R.C.S. Vice-Presidents :—Mr. I. B. Beed, Mr. S. C. Varma, Mr. Z. Ahmed, Mr. Gopinath Das, Mr. P. C. Ghosh, Mr. J. L. Saha, Mr. R. Panday and Mr. N. B. Ghosh. Hony. General Secretary :—Mr. Asutosh Ghosh—Assistant General Secretary :—Mr. A. R. Choudhury.—Hony. Treasurer :—Mr. T. N. Ghosh. Hony. Jt. Secretaries—Library—Mr. K. K. Ghosh and Mr. A. C. Sau. Hony. Librarian :—Mr. N. D. Manna. Hony. Asst. Librarians :—Mr. M. Chail and Mr. S. K. Ghosh.—Hony. Secretary—Games and Entertainments :—Mr. A. G. Hazra.—Hony. Auditor :—Mr. A. K. Banerjee.

CORPORATION CO-OPERATIVE CREDIT SOCIETY

Payment Of Anticipation Loans.

1. Petty loans upto a maximum of Rs. 500 may be sanctioned in anticipation of the final sanction of the Board to those only who are already share-holders of the Society provided that such loans shall not exceed 10 times the salary of the borrower.

2. Such loans are payable after sanction by the Chairman on the approval of the Secretary on the recommendation of 7 Directors of the Board.

3. Applications for anticipation loans are to be taken round by the borrowers to the Directors for their recommendation.

4. Loan applications, for the purpose of payment in anticipation of Board's sanction, are to be registered and verified by the office in the first instance and no such application is to be allowed by the office to be in circulation for the requisite signature of the Directors unless the orders of the Secretary for the purpose has been obtained on the application. Endorsement by any single Director of the Board on the application for the purpose would be sufficient authority for the office to treat all such applications for payment in anticipation of Board Meeting and take necessary steps on them subject to the orders of the Secretary.

The office is directed to defer payment and report on such applications which may come up for sanction without office endorsement.

HOWRAH MUNICIPALITY

Tender Notice

For the Supply of Coal for the year 1941-42

1. Tenders are invited in duplicate for the supply of approximately 5,000 tons of best Indian steam coal at the Serampore Head Water Works of the Howrah Water Supply.

2. Forms of tender may be obtained from the office of the Municipal Store-Keeper, on payment of one anna only per copy.

3. Tenders which must be sealed and superscribed "Coal Tender for Howrah Water Works" and addressed to the Chairman, Howrah Municipality will be received up to 2 p.m. on the 25th March, 1941.

4. A sum of Rs. 1,000 (Rupees One Thousand) should be paid in cash to the Municipal Cashier as earnest money on or before 2 p.m. of the 24th March, 1941. Each tender must be accompanied by the Cashier's certificate that the required earnest money *viz.*, Rs. 1,000 has been deposited. The sum shall be forfeited if the tenderer withdraws his tender before its acceptance or rejection or when after his tender is accepted either in full or in part he neglects or refuses to execute an agreement at his own cost for the above work within a fortnight from the date of acceptance or fails to deposit the balance necessary to make up an amount equivalent to 10 per cent. of the estimated value of the gross accepted quantity of his tender as security deposit.

5. Tenders which are unaccompanied by the Cashier's certificate of the receipt of the earnest money or do not supply all the information asked for or are submitted incomplete in detail, or irregularly filled in or have any unauthorised additions or alterations, may not be considered.

6. Only tenders from owners of Collieries or their authorised agents will be considered.

7. Detailed specifications can be seen and any other particulars necessary may be had, at the office of the Municipal Engineer at Howrah or the Water Works Superintendent's Office at Serampore, between the hours of 2 p.m. and 4 p.m. on any working day.

8. The Municipal Commissioners do not bind themselves to accept the lowest or any tender and further reserve to themselves the right to accept any tender in part or in whole as may seem expedient.

CORPORATION NOTICES

To Contractors

Tenders are invited in duplicate for the following and will be received by the First Deputy Executive Officer on the date noted for each, up to 2 p.m. Each tender in duplicate must be enclosed in a sealed cover and superscribed—"Tender for....." For specifications and tender forms apply to the Keeper of Records between 11 a.m. and 3 p.m. on week days and 11 a.m. and 1 p.m. on Saturdays. Price Rs. 2 per set.

1. Supply of carts for removal of stores during 1941-42.

2. Painting of electric lamp posts in different streets of Calcutta.

3. Cutting and restoring trenches in public roads for laying water mains during 1941-42.

4. Supply and delivery of one electrically operated Headstock suitable for 42 in. dia. sluice valve and two 24 in. double flanged sluice valves for use at Tallah Pumping Station.

Tenders for 1 to 3 will be opened on 18th March and for 4 on 27th March, 1941. The rates quoted in tenders for 1 to 4 are to hold good for three months.

N.B.—All cases of delay over a fortnight in the execution of agreements in respect of works and supply of materials will be reported to the Committee and the parties will not be allowed to execute the agreements after that period without obtaining orders of the Committee.

In case a party deposits earnest money by cheque, he must deposit the cheque at least three working days before the date of opening of the tender.

The contractors should maintain an uniformity of their names and styles of business, appearing on various documents, *e.g.*, Treasurer's receipts, tender forms, agreements, licenses and bills.

Any deviation from this on the part of any contractor whenever detected, will render his tender liable for cancellation.

Where tenders are submitted by a Corporation, it should be signed by a principal officer of the Corporation or by an agent duly authorised in that behalf and be attested by a witness. Where it is submitted by a firm, it should be signed by the proprietor or one of the partners or by an agent duly authorised in that behalf by the firm and be similarly attested

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 12th March, 1941.

Notice to Petty Improvement Contractors.

District III Engineering Department

Tenders for the following work are invited and will be received by the Chief Engineer in duplicate in a sealed cover superscribed "Tender for ....." on Wednesday the 19th March, 1941, up to 2 p.m. :—

276. Providing a teak wood partition in the Electoral Roll Officer's room in the Central Municipal Office Buildings—Rs. 83, dated 11th March, 1941 (15 days).

N. B.—Please note that words in italics "7 days' notice" in clause 6 of the condition of contract should be read as "3 days' notice".

A. F. NABI BAKSH,
District Engineer, III.

District III Eng'g. Office.
The 11th March, 1941.

Time Extended.

Re. Registration of Names as Contractors for Petty Plumbing and Petty Improvement Works, for 1941-42.

The dates for receiving application for registration of names as contractors for the following have further been extended. The application for (1) and (2) below will be received by the Second Deputy Executive Officer on the 31st March, 1941, instead of on the 11th and 12th March, respectively, as previously advertised.

(1) Petty Plumbing and House Drainage Works of the Corporation for the year 1941-42.

(2) Petty Improvement Works (other than petty plumbing and house drainage works) of the Corporation for the year 1941-42.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 8th March, 1941.

DRAINAGE DEPARTMENT

To All P. I. Contractors, District III And Dhappa

Re. Clearing Water Hyacinth and Other Weeds from the Lower Reach of Raja Khal

Dear Sirs,

Please submit your tender in the prescribed tender form for the petty improvement works of the Corporation for the above work, the details of which can be obtained from the department. The tender in a sealed cover, endorsed as above, will be received by me on the 17th March, 1941, at 12 noon.

The work is to be completed within 3 weeks from the date of order to take up the work in hand.

Yours faithfully,
P. C. BOSE,
Executive Engineer, Drainage.

Central Municipal Office.
The 11th March, 1941.

Entally Market.

NOTICE

Hogg Market in place of Mr. Abdul Rahaman Mondal, the recorded occupier of the stalls. Objections, if any, to this application should be submitted to the undersigned within 15 days from date hereof.

A. QASIM,
Acting Superintendent.

Sir Stuart Hogg Market,
The 11th March, 1941.

Modification of Alignment.

It is hereby notified for general information that the Corporation of Calcutta, under powers vested in them in this behalf, have, by a resolution dated the 20th March, 1940, modified the alignment of the portion of McLeod Street affecting premises Nos. 55 and 56, McLeod Street, in Ward 15.

A copy of the plan prepared in this behalf may be seen in the office of the Chief Valuer and Surveyor of the Corporation any working day except Saturday between 11 a.m. and 2-30 p.m. and between 11 a.m. and 12-30 p.m. on Saturdays only on payment of usual fees.

J. C. MUKERJEA,
Chief Executive Officer.

Central Municipal Office,
The 6th March, 1941.

CORPORATION NOTICES—*Contd.*

Gariahat Market

NOTICE

To all whom it may concern, that Babu Provash Kumar Banerjee recorded occupier of Ghee and Butter Stall No. 4 in the Gariahat Market has applied for registration of the name of the other recorded occupier of the stall *viz.*, Babu Baburam Jana, as the sole occupier of the said stall as Babu Provash Kumar Banerjee is going to retire from the business.

Objections, if any, to this application should be submitted to the undersigned within 7 days from the date hereof.

R. K. GHOSE.
Superintendent.

Gariahat Market,
The 10th March, 1941.

Cancellation of Alignment.

Notice is hereby given under section 302 of the Calcutta Municipal Act III (B.C.) of 1923, that the Roads and Bustees Standing Committee of the Corporation, in exercise of the powers, delegated unto them in this behalf, have considered it expedient to prescribe a street alignment along Asgar Mistry Lane to a width of 20 ft. in Ward 18 after cancelling the bustee alignment of the same width, which was originally sanctioned by the General Committee of the Corporation as constituted under Act III B. C. of 1899.

Any person, having any objection to the same, should submit it, in writing, so as to reach the undersigned, on or before Tuesday, the 8th April, 1941.

A copy of the plan, showing the proposed alignment, may be seen in the office of the Chief Valuer and Surveyor of the Corporation, between the hours of 11 a.m. and 2 p.m. on all working days.

J. C. MUKERJEA,
Chief Executive Officer.

Central Municipal Office.
The 8th March, 1941.

Naming of Roads.

The following names have been sanctioned by the Corporation for nine roads, in Ward No. 27, Calcutta Improvement Trust Scheme No. XXXIII :—

(1) Road No. 1—A 40 ft. wide road, being extension of Janak Road upto Southern Avenue, to be called "Janak Road."

(2) Road No. 2—A 40 ft. wide road, being extension of Parasar Road, upto Road No. 10 *i.e.*, extension of Raja Basanta Roy Road to be called "Parasar Road."

(3) Road No. 10—A 40 ft. wide road, being extension of Raja Basanta Roy Road, upto the Scheme limit, to be called "Raja Basanta Roy Road."

(4) Road No. 3.—A 40 ft. wide road (portion above 30 ft.) running southward from Lake Road on the west of P102, C. I. T. Scheme XV-B upto Southern Avenue, to be called "Lake Place."

(5) Road No. 4—A 40 ft. wide road from Road No. 8, (Sirdar Sankar Road Extension and on the west of the Electric Office, Southern District) up to Southern Avenue, to be called "Bompas Road."

(6) Road No. 6—A 40 ft. wide road, being extension of Sirdar Sankar Road, upto Road No. 9, to be called "Sirdar Sankar Road."

(7) Road No. 9—A 40 ft. wide road, running east to west, on the north of the Electric Office, from Road No. 4 upto the Scheme limit, to be called "Dr. Sarat Banerjee Road."

(8) Road No. 7—A new 50 ft. wide road, being division of Lake Road to Lansdowne Road and a new 60 ft. wide road in prolongation therefrom to the scheme limit to be called "Lake Road."

(9) Road No. 5—A 40 ft. wide road, running southwards from Jatin Das Road up to Raja Basanta Roy Road Extension, to be called "Maharaja Nanda Kumar Road."

D. N. GANGULI,
Assessor

Central Municipal Office,
The 8th March, 1941.

Street Alignment.

Notice is hereby given under section 302 of the Calcutta Municipal Act III (B.C.) of 1923 that the Roads and Bustees Standing Committee of the Corporation in exercise of the powers delegated unto them in this behalf have considered it expedient to prescribe the alignment of a portion of Sanatan Sil Lane from west side of premises No. 3, Sanatan Sil Lane to meet the 12 ft. sanctioned alignment of the Corporation joining Biswa Nath Moti Lal Lane with Chaitan Sen Lane in Ward 11 to a width of 12 ft. under section 302 of the Act as shown on the plan.

Any person having any objection to the same should submit it in writing so as to reach the undersigned on or before Wednesday, the 9th April, 1941.

J. C. MUKERJEA,
Chief Executive Officer.

Central Municipal Office,
The 10th March, 1941.

Notice is hereby given under Section 308 read with Section 302 of the Calcutta Municipal Act III (B. C.) of 1923 that the Roads and Bustees Standing Committee of the Corporation in exercise of the powers delegated unto them in this behalf have prepared a scheme and plan showing the alignment of a 40 ft. projected public street from Chingreehatta Lane through premises No. 36/1, Tangra Road to Hughes Road, in Ward 18.

Any person having any objection to the same should submit it in writing so as to reach the undersigned on or before Friday, the 21st March, 1941.

A copy of the plan showing the proposed alignment may be seen in the office of the Chief Valuer and Surveyor of the Corporation between the hours of 11 a.m. and 2 p.m. on all working days.

J. C. MUKERJEA,
Chief Executive Officer

Central Municipal Office,
The 21st February, 1941.

BRITISH INDIA STEAM NAVIGATION CO., LD.

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates:—
10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.
Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

THE WEEK IN THE CORPORATION

A SHORT RECORD OF THE MORE IMPORTANT DECISIONS OF AND DISCUSSIONS AT THE CORPORATION MEETING FOR THE WEEK ENDING MARCH 21, 1941

Mr. J. C. Mukerjea's Re-Appointment As Chief Executive Officer

Corporation Re-Affirms Previous Resolution

A SPECIAL Meeting of the Corporation on Saturday, the 22nd March, 1941, re-affirmed its resolution of the 28th February, 1941, re-appointing Mr. J. C. Mukerjea, as Chief Executive Officer for a further period of two years from 1st April, 1941.

This was in reply to the communication from the Government of Bengal refusing to approve the re-appointment.

The meeting was convened on the requisition of thirty six Councillors where names appear on the next page.

Mr. N. C. Chatterjee moved:—

1. *"That the Corporation of Calcutta records its protest against the action of the Government of Bengal refusing to approve the re-appointment of Mr. J. C. Mukerjea as the Chief Executive Officer in terms of the resolution of the Corporation dated the 28th February, 1941, without assigning any reasons for such refusal."*

2. *"That this Corporation re-affirms the resolution passed by the Corporation on the 28th February*, 1941, *re-appointing Mr. J. C. Mukerjea as the Chief Executive Officer of the Corporation, for a further period of 2 years from 1st April*, 1941, *on his present pay and emoluments, and this Corporation directs that this Resolution be forwarded forthwith to the Government of Bengal, for approval under the proviso to Section* 51 (1) *of the Calcutta Municipal Act."*

3. *"That in the event of the approval of the Government of Bengal not reaching the Corporation on or before the* 31*st March*, 1941, *Mr. J. C. Mukerjea do continue as the Chief Executive Officer of the Corporation on his present pay and emoluments in terms of the said resolution of the Corporation dated the* 28*th February*, 1941."

Mr. Bidhubhusan Sarkar seconded the motion.

Mr. B. N. Roy Chowdhury moved an amendment which sought to substitute the first part of the motion by the following :—

"That this Corporation feels it its duty to request the Government of Bengal to revise their decision refusing approval to the re-appointment of Mr. J. C. Mukerjea as the Chief Executive Officer in terms of the resolution of the Corporation dated 28*th February*, 1941, *in view of the almost unanimous opinion of the Councillors and Aldermen in favour of it."*

The original motion of Mr. N. C. Chatterjee as amended by Mr. B. N Roy Chowdhury was accepted by the House, which rejected an amendment moved by Mr F. G. Watson seeking to re-appoint Mr. J. C. Mukerjea for one year only.

The names of the signatories to the Requisition are given below :—

(1) Messrs. N. C. Chatterjee, (2) Dhirendra Nath Ghose, (3) Bepin Behary Sadkhan, (4) B. S. Nahar, (5) N. N. Dalal, (6) M. L. Mackar, (7) Bepin Behary Ganguli, (8) Harihardas Chowdhury, (9) P. B. Khatick, (10) D. K. Majumdar, (11) Hriday K. Ghose, (12) Prafulla K. Dutt, (13) S. Sen, (14) Z. Ahmed, (15) Shamsul Huq, (16) Dejiban Banerjee, (17) A. Matin, (18) Md. Israil, (19) S. Hossain, (20) M. M. Burman, (21) S. K. Mitter, (22) M. K. Majumdar, (23) B. B. Sarkar, (24) S. A. Habib, (25) Jogesh Chandra Ghose, (26) Suresh Ch. Varma, (27) Jagannath Kolay, (28) Kshitish Ch. Chakravarty, (29) H. M. Yusuf, (30) A. L. Poddar, (31) Fakir Ch. Ghose, (32) H. S. Paul, (33) N. C. Paul, (34) Kalimuddin Chowdhury, (35) Sk. Baser Ali, and (36) Mohammed Jalil.

THE FIRST REQUISITION MEETING

The Corporation, on the 28th February, 1941, passed the following resolution *nem con* :—

That in modification of all previous resolutions on the subject, Mr. J. C. Mukerjea be re-appointed, under Section 51(1) *of the Calcutta Municipal Act, as the Chief Executive Officer of the Corporation for a term of two years with effect from the date of expiry of his present term of service* (1*st April*, 1941), *on his present pay and emoluments and on the existing terms and conditions of his service.*

In terms of the resolution of the Corporation as above, sanction of the Government was applied for under Section 51 (1) of the Act, to the re-appointment of Mr. J. C. Mukerjea as the Chief Executive Officer of the Corporation for a further period of two years from the 1st April, 1941.

The following reply was received from Government :—

Letter No. 442-M., dated the 13th March, 1941, *from the Secretary to the Government of Bengal, Department of Public Health and Local Self-Government, Municipal Branch.*

"I am directed to refer to your letter No. S.5064, dated the 1st March, 1941, and to say that Government regret that they are unable to approve, under proviso to Section 51(1) of the Calcutta Municipal Act, 1923, the re-appointment of Mr. J. C. Mukerjea, the Chief Executive Officer of the Corporation of Calcutta for a further period of two years from the 1st April, 1941".

Closely following on the receipt of the above letter, the following requisition over the signatures of Messrs. (1) S. A. Habib, (2) A. Matin, (3) H. Md. Yusuf, (4) Hari Sanker Paul, (5) B. B. Sarcar, (6) J. Kolay, (7) F. C. Ghose, (8) A. S. Nasker, (9) Prafulla K. Dutt, (10) J. C. Ghose, (11) Sudhir Chandra Ray Chaudhuri, (12) Kshitish Chandra Chakravarty, (13) I. B. Beed, (14) A. C. Mitter, (15) J. N. Mondal, (16) N. C. Paul, (17) B. S. Nahar, (18) Mrigendra Kumar Majumdar, (19) D. K. Mazumdar, (20) Bepin Behary Ganguly, (21) Mohan Lal Mackar, (22) B. B. Sadkhan, (23) P. B. Khatick, (24) M. A. Jubbar, and (25) S. K. Sarkar was received by the Mayor :—

"We understand that the Government has expressed its inability to approve the re-appointment of Mr. J. C. Mukerjea as Chief Executive Officer of the Corporation for a fur-

ther period of two years from the 1st April, 1941.

"This is a serious matter and affects the prestige of the Corporation. We therefore request you to call a Special Meeting under Section 58 (2) of the Act on Tuesday, the 18th instant, at 5-15 p.m. to consider the matter. If however you yourself call a Special Meeting for the purpose on the date and time mentioned above, this requisition need not be placed before the Corporation.

"As the time is very short and the matter is very urgent, we have been compelled to request you to call an early meeting on the date mentioned above."

In accordance with the above requisition a Special Meeting of the Corporation was held on Wednesday, the 19th March.

On the House assembling Mr. B. N. Roy Chowdhury raised a point of order that under Rule 8 of the Rules of Business a requisition meeting must be accompanied by notice of motion. If they looked into the present requisition, they would find no proposition which they might be called upon to discuss and so he submitted that this meeting was out of order.

Replying the Mayor said that he appreciated the point raised by Mr. Roy Chowdhury, but he had tried to understand the situation as best as he could. He felt that Rule 8 imposed a definite duty on the Mayor to call a meeting when he received a requisition and accordingly he called the meeting. But requisition meeting should have three elements : requisition, notice of motion and names of signatories. In this requisition there was no notice of motion. But the parliamentary practice was that they might discuss things without coming to decision just to understand each other's point of view. The Mayor said that his object was not to muzzle any discussion or any clarification of views, but for this unfortunate difficulty no definite decision could be taken by the House.

Mr. N. C. Chatterjee maintained that they were perfectly competent to move a substantive proposal which directly concerned the business mentioned in the requisition. The business was the refusal of the Government of Bengal to re-affirm the appointment of Mr. J. C. Mukerjea in spite of the resolution which had been unanimously passed by the Corporation of Calcutta. Mr. Chatterjee said that the requisition was valid.

Mr. Sushil Chandra Sen and Mr. Sudhir Ch. Ray Chaudhuri also maintained that there was some indication in the requisition as to what was their motion.

The Mayor held that in the requisition the notice of motion and the names of the signatories should be set out and he could not get out of that. That was why he sought a *via media*, and that was to discuss things to-day, by which they would be able to know what the signatories wanted.

Mr. N. C. Chatterjee said that they had already been treated like school boys by the Government and so he thought it was far better that they should have a proper requisition and proper meeting.

Eventually, it was agreed that a proper requisition be issued and that the meeting be fixed for Saturday March 22.

THIRTY-SIXTH ORDINARY MEETING OF THE CORPORATION OF CALCUTTA, HELD ON WEDNESDAY, THE 19TH MARCH, 1941

Sale And Purchase Of Securities

On the recommendation of the Finance Standing Committee it was decided to delegate the final power to enunciate the general policy of buying and selling securities including Calcutta Municipal Debentures to the Finance Standing Committee and that the final power to effect sale or purchase of individual securities, according to the policy to be adopted by the Committee, to the Chief Executive Officer.

Tax Defaulters

At the instance of the Finance Standing Committee the Collector was authorised to take such summary action as the Act empowers him to do, against Councillors and other influential gentlemen, who have defaulted payment of rates, unless the Corporation directs otherwise.

The list of defaulters as on 26th February, 1941, was placed before the Corporation for their information.

Mr. D. J. Cohen moved as an amendment that the Collector be directed to take action against defaulters irrespective of the fact whether the party concerned was a Councillor or an Alderman or otherwise.

The amendment was accepted and carried.

Calcutta Engineering College

On the recommendation of the joint meetings of the Estates and General Purposes and the Primary Education Standing Committees dated the 11th March, 1941, the recurring grants of Rs. 5,000 sanctioned in respect of the Calcutta Engineering College at 18, Jamir Lane, for the year 1939-40, was released, subject to the condition that the amount is to be spent for the maintenance of the College in consultation with the Education Officer and the Deputy Chief Accountant.

In reply to Mr. D. J. Cohen, who opposed the release of the grant, Mr. B. N. Roy Chowdhury said that the Institution has been placed on a sound footing and was being run on a proper line—

VACCINATION IS A SIMPLE OPERATION
WHY SHOULD YOU FEAR IT?

Mr. Hamoodur Rahaman, who had inspected the institution, said that it was supplying a great need. The Joint Committee of Inspection were thoroughly satisfied with the working of the institution. A Clock Tower had been made by the pupils of the College, and the clock, which kept perfect time, was unique of its time.—Mr. N. C. Chatterjee pleaded for the release of the grant and pointed out that adequate safe-guards had to be made to keep a check on the expenditure.

As stated, the grant was released.

Grants To Hospitals

The question of grants to hospitals, dispensaries and other institutions for 1940-41 was postponed for a week.

The Health Officer had reported that he had received 96 applications for grants to hospitals, dispensaries and other institutions. Of these, 12 were new applications. Among the new and old institutions there were 48 Allopathic, 30 Homoeopathic, 13 Ayurvedic and 2 Unani Institutions, and of the remaining eight—three had Allopathic, Homeopathic and Ayurvedic departments, four had Allopathic and Homoeopathic departments and one had Allopathic and Ayurvedic departments.

In view of the financial stringency of the Corporation no increase in the amounts of grants to those institutions, which have been receiving grants hitherto, or any capital grant to any institution have been sanctioned this year.

The Public Health Standing Committee in making their recommendations had to abide by the resolution of the Corporation dated the 2nd October, 1940, directing a reduction of 25 per cent. in the amounts of grants as sanctioned last year and left the final decision on the point in the hands of the Corporation.

GRANTS TO HOSPITALS

Sir Nilratan Sircar Disapproves The Cut

In the course of a settlement to the *United Press* in connection with the recent decision of the Public Health Standing Committee to reduce grants to various hospitals and dispensaries by 25 per cent. Sir Nilratan Sircar says :—

"This is the first time during the last 10 years that the Health Committee has recommended a drastic cut in the grants to all the hospitals and dispensaries. The Committee, to the surprise of every body has deviated from its traditions of the past as it has systematically been recommending increase in these grants from year to year. The proposed reduction of grants if given effect to by the Corporation at the fag end of the year will bring great hardship on the institutions, all of which usually receive these grants after they have fulfilled all the conditions attached to their respective grants during the outgoing year. Moreover, the economic difficulties due to the present war conditions have to be seriously considered. The cost of medicines and diet charges have gone considerably high. Government have gone so far as to arrange for special Dearness Allowances to their staff to enable them to cope to a certain extent with the general rise in prices. The patients in the Hospitals ought to get the benefit which is obtained by poor people outside. The Committee's decision at this critical time has therefore, to be deplored.

"I would, therefore, draw the attention of every individual Councillor and Alderman to the immense difficulty which these charitable institutions will have to encounter if the proposed reduction is given effect to and request every one of them to seriously consider this aspect and to be unanimous in sanctioning grants to be paid to all the institutions concerned on the basis of at least the last year's grants."

SMALL-POX IN CALCUTTA

Health Officer's Warning

Dr. S. N. Ghose, Health Officer, Corporation of Calcutta has issued the following under date March 20, 1941 :—

The public are aware that Small-Pox has at present broken out in an epidemic form in the city. Appeals and warnings were issued through the Press under my signature as early as in the months of November and December last year requesting the people to get themselves vaccinated, but it is a regrettable fact that there is still a large percentage of people (including a percentage of people who come to the city from the mofussil) who have remained quite unmoved and have not taken vaccination or revaccination for a pretty long time, making themselves easy prey to infection from this deadly and dangerous disease

It is all the more regrettable that many educated people who are expected to have sufficient sanitary consciousness to guide themselves and others do not and have not cared to vaccinate themselves and their dependants in time as a precautionary measure. I would like again to emphasise the fact that small-pox is a preventible disease and it can only be prevented by timely vaccination and re-vaccination. Statistics of the various cities of both East and West have revealed the efficacy of vaccination beyond any shadow of doubt.

Isolation of a patient is a very important factor in preventing infection. Whenever a case of small-pox occurs in a house, it is the bounden duty of the house-holder to get him isolated to prevent spread of infection. For treatment of patients about 200 extra beds were opened in the Campbell Hospital last month and opening of additional beds have to be arranged in accordance with the exigency of the situation. Two extra sheds are being constructed for the purpose. These are all at Calcutta rate-payer's money.

An extra staff of 81 male vaccinators and 29 female vaccinators were taken since December last and have been working since then to push on the work of vaccination.

The public are requested to bring to my notice any specific case of delay or dereliction of duty on the part of any vaccinator and I assure them that proper steps would be taken against the delinquents.

TUBERCULOSIS SANATORIUM FOR BENGAL

To Be Opened At Peshok

The Government of Bengal proposes to establish a permanent tuberculosis sanatorium at Peshok, in the Darjeeling District. This was announced by His Excellency Sir John Herbert when he presided over the annual meeting of the Bengal Tuberculosis Association at Government House, Calcutta on Monday last. His Excellency added that steps for the acquisition of land were already under way, and the necessary provision had been made in the Budget for the coming year.

The Corporation Budget For 1941-42 Adopted

Cut In Salaries Of Officers

THE Budget Estimates of Income and Expenditure for the Corporation of Calcutta as recommended by the Budget Special Committee were considered and adopted after they had been discussed for two days—at the Special Meeting of the Corporation on Thursday, the 20th March, and the adjourned Special Meeting on Friday, the 21st March, 1941, respectively.

The Chief Executive Officer's Budget Estimates for 1941-42, it may be recalled, was laid before the Corporation on the 10th February, 1941, and was referred to a Special Committee consisting of 26 members. The Special Committee held ten meetings and suggested certain modifications.

At Thursday's meeting Councillor Phanindra Nath Brahma (Deputy Mayor), who acted as Chairman of the Budget Special Committee, presented the modified Estimates and moved for the adoption of the Budget as also for the confirmation of their detailed recommendations, after which a general discussion on the recommendations followed.

The Estimates as modified by the Budget Special Committee showed that the year would start with an opening balance of Rs. 40,70,000. The receipts had been estimated at Rs. 2,59,50,000 and the expenditure at Rs. 2,55,88,000. The closing balance would stand at Rs. 44,82,000.

The Budget as presented by the Chief Executive Officer showed a small deficit of Rs. 76,000, though the closing balance in hand was nearly Rs. 40 lakhs.

The Budget Special Committee had wiped off the small deficit, reduced the revenue expenditure and correspondingly enhanced the closing balance by nearly Rs. 4,12,000.

[*The speech of the Chairman of the Budget Special Committee will be found published as a Supplement to this issue*—ED. "*C. M. G.*"]

The Adjourned Special Meeting on Friday decided to introduce a cut in the salary of the higher officers.

It was stated that if the proposed cut was effected, it would result in a saving of one lakh of rupees.

The cut will be at the rate of 25 per cent. on salaries above Rs. 2,000; 20 per cent. on those above Rs. 1,500: 15 per cent. on those above Rs. 1,000; 10 per cent. on those above Rs. 500 and 5 per cent. above those on Rs. 250.

A number of amendments to the Budget proposals were moved by Councillors, of which only two were accepted—the first relating to the cut in salaries of higher officers and referred to above and the second providing for a sum of Rs. 1,20,000 in the Loans Budget for 1941-42, for the scheme for the removal of all Pail Depots in the city and added areas. The rest were either withdrawn, ruled out of order or dropped. Only one was accepted by the Chairman of the Budget Special Committee providing for Rs. 5,000 for fitting up reserve tanks in all the Wards of the City at important junctions or for fitting up 1 inch tube wells for the supply of pure drinking water during the noon time when there is no pressure or supply in standposts.

GENERAL DISCUSSION ON THE BUDGET

At Thursday's Special Meeting after the Chairman of the Budget Special Committee had placed the recommendation of the Budget Estimates, he moved:—

(1) *That the Chief Executive Officer's Estimates of Income and Expenditure for* 1941-42 *as modified by the Budget Special Committee be adopted under Section* 94 (1) (a) *of the Calcutta Municipal Act as the Budget Estimates of the Corporation for the year* 1941-42.

(2) *That under Section* 94 (1) (b), *of the Act, the following rates, taxes and fees be levied for the year* 1941-42:—

(i) *Consolidated rate at* 19½ *per cent. plus* ½ *per cent. on account of Howrah Bridge Tax.*

(ii) *Dog Tax under Section* 178 (2) *of the Act at Rs.* 5 *per dog per annum.*

(iii) *License and other taxes as levied in the current year.*

SMALL-POX EPIDEMIC IN CALCUTTA
GET YOURSELF INCOCULATED

(3) That under Section 98 of the Calcutta Municipal Act, the total amount of loan to be raised in 1941-42 for capital works be fixed at Rs. 87,03,000.

Mr. Prafulla Kumar Dutta seconded the motion and congratulated the Chairman of the Budget Special Committee on his succeeding in balancing the Budget.

Mr. Debendranath Mukherji criticised the budget proposals made by the Committee. He complained of lack of principle guiding the Committee in considering the salaries of the superior staff. There must be, he said, some principle on which they should proceed to increase the cost of administration. The Committee had not taken into consideration the receipt side and the expenditure of the Corporation had been increased at random without any underlying principle. He suggested that salaries and establishment expenses should be curtailed in order that the Corporation might have a really balanced budget.

Mr. Md. Rafique also criticised the recommendations of the Budget Special Committee. He suggested various sources of income which could be tapped. He complained that there was considerable overlapping of the Corporation administrative work and there could be some savings in this direction. He suggested that a small committee should be formed to discuss those avenues which would bring income to the Corporation and to guard against the possible deficit of the Corporation finances in the next year.

Mr. Mrigendra Kumar Mazumdar while congratulating the Budget Special Committee, regretted that nothing had been done for improving the condition of the added areas.

Mr. Narendra Nath Dalal extended his welcome to the Committee's recommendations. He, however, pointed out to the immense difficulties undergone by the people in the added areas. They suffered most on account of good supply of drinking water. These areas were full of *bustees* and needed improvement in proper drainage. He pleaded for more funds for an all-round improvement of the added areas.

Mr. Homoodur Rahman severely criticised the budget provisions with regard to educational grants. He said that the budget was lacking in initiative and was worse than the one presented by the Chief Executive Officer. He felt that there was real need for economy in the top-heavy administration of the Corporation. He suggested that they should have approached the Government long before to levy education cess for introducing free and compulsory education in the city. They could also legitimately claim a good portion of the Motor Vehicles Tax from the Bengal Road Board Fund at the disposal of the Government.

Mr. Madan Mohan Burman who voiced a dissentient note said that the budget did not represent the views of the representatives of the rate-payers. Although the Deputy Mayor had stated that the existing scale of rates and taxes had not been increased the speaker found that the rate for the supply of filtered and unfiltered water had been increased with retrospective effect from last year.

Clarifying the budget position in the absence of Mr. W. A. Burns, Mr. S. A. Gray said that in order to raise a loan the Corporation must be able to show a case of recurring saving in expenditure and recurring income. The idea was that if they could show a reasonable case that they had cut down their recurring expenditure so as to make a reasonable assumption that that saving would continue, then they had a case for raising a loan. That recurring saving would provide the basis for raising a loan and the amount that would be thus raised would give the Corporation a spending capacity much in excess of their immediate needs.

Sir Hari Sanker Paul pleaded for the improvement of added areas for which, he held, a good deal of amount should be spent.

Mr. Mackertich John said that the Corporation was at present spending nearly Rs. 3,00,000 annually on rents for accommodation of primary schools, dispensaries and other Corporation institutions. But they were selling their own land annually to the value of nearly Rs. 4,00,000. He suggested that the money realized from sale of land should be set aside for the construction of buildings for the accommodation of primary schools and other institutions for which they now paid rent.

Mr. Syed Badrudduza said that an attempt had been made to balance the budget by patch work. Whether the Government would sanction the raising of the loan was a matter of question. Until they proved that the new work to be undertaken was of a capital nature they could not expect the Government sanction to raise the loan. He pleaded for the financial improvement of the Corporation by tackling other sources of revenues. They could increase the rate by 1 p.c. because they had not reached the maximum limit. He remarked that desperate situation called for desperate remedy.

Mr. Sudhir Kumar Chatterjee and Mr. Dhirendra Nath Ghosh also participated in the debate.

CUT IN THE SALARIES OF OFFICERS

At the Adjourned Special Meeting to consider Budget Estimates held on Friday, the 21st March, Mr. Debendra Nath Mukherjee moved :—

That a cut of 25 per cent. be made from the present salaries of the officers who get above Rs. 2,000; 20 per cent. from those who get above Rs. 1,500: 15 per cent. from those who get above Rs. 1,000; 10 per cent. from those who get above Rs. 500 and 5 per cent. from those who get above Rs. 150 in modification of all previous resolutions relating to the salaries and grades of all officers of the Corporation of Calcutta on account of its present financial conditions.

Seconding the amendment Mr. Homoodur Rahman said that they would have a total saving of a little over Rs. 1 lakh by a cut in salaries of higher officers. This would facilitate carrying out necessary projects of improvements in the city. He pleaded for the reduction of cost of administration.

Mr. Satish Chandra Bose moved by way of an amendment that the cut should be imposed up to the limit of Rs. 200. This was accepted by the mover.

Mr. Sudhir Kumar Chatterjee suggested that the matter should be discussed in detail by the Finance Standing Committee.

Mr. Sushil C. Sen while agreeing that there was room for retrenchment, maintained that Mr. Mukherjee had begun at the wrong end. To inflict a cut on salaries of officers when prices were soaring on account of the war would be, to say the least, inopportune. A better course would be to refer the matter to the Finance Committee with a direction to that body to consider how administrative costs could be reduced without causing hardship to Corporation officers. What was needed was a comprehensive scheme of retrenchment and not mere "cuttings and clippings."

Mr. N. C. Chatterjee spoke in the same strain, pointing out that neither the Government of Bengal nor the Central Government nor the Port Commissioners had reduced the salaries of their officers. He said further that the financial condition of the Corporation was not as bad as it had been painted. "We have established a borrowing capacity and we are going to raise a loan of Rs. 37,00,000 out of which we are going to pay Rs. 15,00,000 for Ward improvement works."

Mr. B. N. Roy Chowdhury said that all high officials of the Government were contributing to war funds and that was why no cut had been imposed on the salaries of Government officials.

Mr. Roy Chowdhury added that Hindu Mahasabha and Congress members had always complained that the Corporation's was a top-heavy administration, that the salaries of their officers were too high, and it was strange that they now opposed a salary cut.

Mr. W. A. Burns, opposing, said that the amendment did not make for the proper treatment of the Corporation staff. He maintained that no suggestion to reduce the pay of their officers should be made without the most mature deliberation. He did not think that the pay of the Corporation officers in general was too high. At a time like the present, salary cuts were not fair to the staff.

Mr. Narendra Nath Dalal said that he was opposed to such a motion on the ground that proper considerations had not been made in the present case.

Mr. Syed Badrudduza in opposing the motion said that the Government of Bengal in spite of a deficit budget did not introduce a pay cut. He remarked that if the pay cut was introduced it would shake the morale of the administrative staff.

The cut motion was adopted as amended by Mr. Satis Chandra Bose by a majority of votes.

FOR LONDON AIR-RAID VICTIMS

A Lakh For The Mayor's Fund

A tribute to the courage and fortitude with which the people of London are facing air-raids was paid by the Bengal Premier, Mr. A. K. Fazlul Huq, in the Legislative Council on Wednesday last when he presented to the House a token demand of Re. 1 for a supplementary grant.

He said that the demand of one rupee was made for the purpose of obtaining the assent of the Legislature to the payment of a contribution of one lakh of rupees to the Mayor of Calcutta's Fund for the relief of London air-raid victims.

The Premier pointed out that considerable savings were expected under the head of "Miscellaneous" in the current year to which the proposed expenditure was debitable. Although, therefore, no additional appropriation was required, the Government appreciated that the charge was of a novel nature and they thought it proper that the Legislature should be given an opportunity of discussing the proposal.

The Premier added that in sanctioning this payment, Bengal would pay her tribute to the "courage and fortitude with which the people of London are facing their terrible ordeal and would thereby range herself on the side of those nations which oppose aggression and violence as an instrument of policy".

EXPANSION OF PRIMARY EDUCATION

Government Refuse Contribution To The Corporation

The Government of Bengal have turned down the representation made by the Calcutta Corporation to make a contribution to the Corporation by way of helping it to further improve and expand primary education in the city.

The Government, it is pointed out by the Secretary of the Education Department, have been collecting data for amending the Bengal Primary Education Act of 1919 with a view to ensure the provision of adequate facilities for primary education in the municipal areas of the province and that pending final decision in the matter they regret that they are unable to reopen the question of making any further contribution to the Corporation for primary education in Calcutta.

The Corporation maintains that Government are not backing up the promises they made when the Corporation decided to introduce primary education in Calcutta. The last correspondence that the Corporation had with the Government on the subject was in March, 1939

CITY'S OFFICIAL PREMISES

Protective Measure

Government of Bengal have taken in hand protection of a number of essential official premises in the city against air raids as a part of protection to meet an emergency.

Already the protective operations have commenced so far as the Lalbazar Headquarters of the Calcutta Police are concerned. One method of giving partial protection to persons inside a premises is to build a wall either of brick or sand bags in front of openings of the building as a guard against flying splinters. This method is being adopted at Lalbazar and the walls that are in process of construction there will be of about eight feet. This will enable the essential staffs to carry out their duties during an air raid with a feeling of comparative security.

It is officially understood that other city police stations, the Fire Brigade Headquarters, certain hospitals and a number of other Government Buildings are included in this protective scheme and will be treated in the same way as the Lalbazar Headquarters are being treated.

Are we your advertising medium ?

Reaching every responsible person connected with the Corporation of Calcutta and other Indian Municipalities, and also to many abroad in distant and important parts of the world, the "Gazette" helps you to scale the buying wall which your salesmen cannot climb. Thus, a direct contact is established through the "Gazette" between you and the actual buyers of the innumerable things that are daily needed and procured for every municipality, far and near.

There is no waste, therefore, for the advertiser seeking to book these orders from the Municipalities when he puts "The Calcutta Municipal Gazette" to work for him.

We have further the pleasure of making it known that this "Gazette" has established itself in the unique position of the successful pioneer in Indian municipal journalism and, as a reliable guide in matters concerning health, hygiene and other interests allied to civic progress, is widely noticed and quoted by contemporaries in India and abroad.

Scientific And Technical Advisory Board

The Mayor Welcomes The Members Of The Co-ordinating Committee

MEMBERS of the Co-ordinating Committee of Scientific and Technical Advisory Board appointed by the Calcutta Corporation, met for the first time on Monday afternoon in the Mayor's room at the invitation of Mr. A. R. Siddiqi, Mayor of Calcutta.

It was decided that the Co-ordinating Committee would meet the members of the various Sub-Committees on April 4, when Dr. J. B. Grant, Director of the All-India Institute of Hygiene and Public Health, would explain to them the steps taken in the matter of public health and sanitation in the Phillipines, China and other countries, where he had been working on the problem of public health for years past.

ABDUR RAHMAN SIDDIQI
Mayor Of Calcutta

It was also decided that Sub-Committees should begin work in their own spheres almost at once and make a general survey of the task before them. When these Sub-Committees have prepared the outlines of their work, the Co-ordinating Committee will study them and decide upon the advice to be given to the Corporation.

The Mayor's Welcome

Mr. Siddiqi, in welcoming the members, stated that he had been congratulated by all and sundry for taking the initiative in establishing the Board and the members would be happy to learn that before going to jail and after his return from it, Alderman Subhas Chandra Bose was very anxious that the Board should be established. Mr. N. C. Chatterjee, the leader of the Hindu Mahasabha group in the Corporation, had also assured the Mayor of his wholehearted support and the European group were equally sympathetic.

That there were difficulties ahead could not be overlooked; these difficulties might be financial and on occasions even political but Mr. Siddiqi assured the Committee that the Corporation, as a whole, wished the Board every success and the ratepayers and citizens were very anxious that the Board should take matters in hand and make the city a better place to live in.

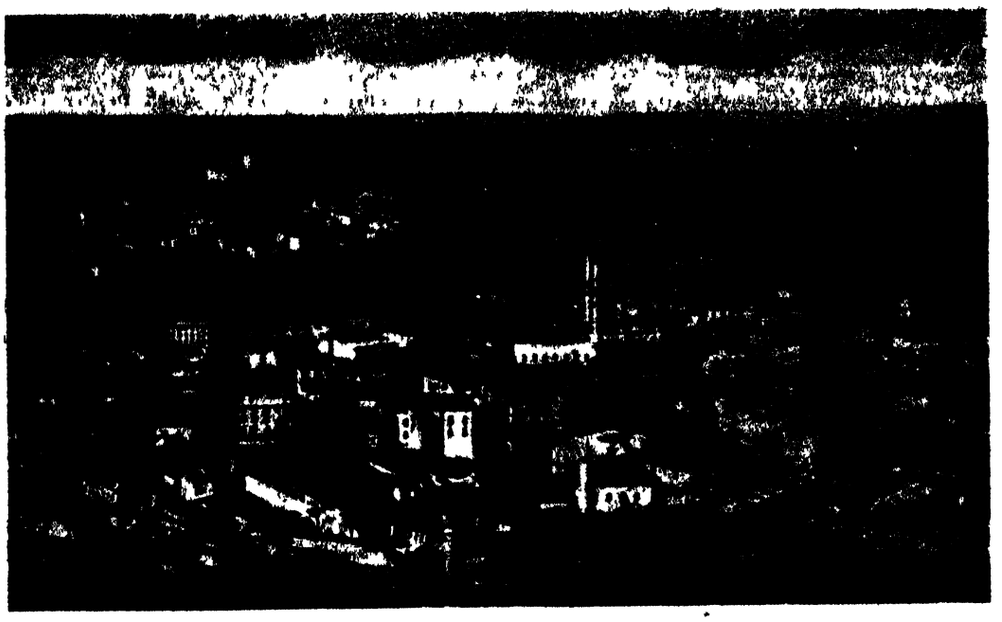
The Co-ordinating Committee is composed as follows :—

Mr. A. R. Siddiqi, (Chairman).
Dr. K. C. Chaudhuri, (Secretary).
Secretary, Calcutta Corporation, (Joint Secretary).
Dr. R. Ahmed
Dr. J. C. Ray.
Dr. Iyenger.
Mr. B. Ghosh.
Dr. B. C. Guha.
Dr. M. N. Saha.
Chairman, Mosquito Control Committee.
Chairman, Water Supply Advisory Board.
Dr. Bashir Ahmad.
Mr. S. C. Mitter.
The Chief Executive Officer.
The Health Officer.
The Chief Engineer.
The Education Officer, and
The Health Publicity Officer.

THE SCHEME IN DETAIL

The scheme, which was prepared by Mr. A. R. Siddiqi, (Mayor), is based somewhat on the lines of the Advisory Board which guides the activities of the London County Council.

The Board will work through Committees dealing with various aspects of the civic life of Calcutta. For the present nine Committees consisting of experts have been constituted.



Of these, the Committee for the Care of the Sick will go into the questions of hospital accommodation in Calcutta; isolation in infectious diseases; outdoor treatment; and provision of diagnostic laboratory service for medical treatment.

The Food and Nutrition Committee will consider matters relating to the supply, preservation, transport and distribution of pure foodstuffs in the city and the effective prevention of adulteration of any kind. This Committee, it is proposed should also consider the possibility of running community kitchens and community restaurants in accordance with modern nutrition principles both for school children and for the public.

The Education Sub-Committee will engage itself with the question of providing educational facilities to poorer children; and suggest means of improving the standard of education and providing technical and vocational education particularly through evening classes.

The Prevention Sub-Committee, it is suggested, should consider the whole system of preventive inoculation in the City, and suggest measures for its improvement and expansion.

(Continued on page 630).

ISTANBUL

THE City Of The Turks

By

VANGUARD

A PANORAMIC VIEW OF CONSTANTINOPLE

ONCE again Istanbul has become the cockpit of power-politics. Once again, it has drawn the attention of the whole world upon it. For, at its very gates have come the invader, this time not from the East, but from the West.

This city that Asia has placed on the tip of Europe has a history more romantic than that of any other in the world. Once a rival of Rome as the capital of a great Empire, Constantinople nurtured the Eastern Church, and became the centre of Christianity in the East. But a few centuries later, she changed her masters and became the outpost of Islam in Europe. The mighty Ottoman Empire, that cosmopolitan state, which, for many centuries covered the greater part of South-Eastern Euorpe, Western Asia and North Africa, was ruled by *firmans* issued from the Sultan's palace at Constantinople.

With the decline of that Empire, the importance of Constantinople did not wane. Only the nature of its importance changed. Though its power declined, its magnificence remained and with it remained the anxiety of the European Powers to control the diplomacy of the Sublime Porte. Turkey, never ceased to worry the diplomats of Europe since they were anxious to share the legacy of the "Sick man of Europe". Thus Turkey became involved in the cross-currents of imperialist rivalries, the Russian and the British, German, French and Italian. The last Great War brought her the chance to free herself from the wire-pullings of foreign powers and the man to do the job was Kemal Ataturk.

A Turning-Point

But the rise of New Turkey meant a change of fortunes for Constantinople. Istanbul, as she was re-named, no longer became the political centre of Free Turkey. As the champion of the oppressed peasantry of Anatolia, Kemal shattered the rotten fabric of the Ottoman Empire. During the War of Independence, he declared: "Henceforth Stambul does not control Anatolia, but Anatolia Stambul." The change of capital from Constantinople to Ankara was not a matter of convenience. It was something more. It involved the recognition of the principle that New Turkey would reflect the will of the people, and, as such, must be situated in the heart of the country. The rugged landscape of Ankara might not be so picturesque as the enchanting vista from Istanbul, but it portrays more faithfully the life of the Turkish Nation.

Change Of Capital

Considerations of a very practical character prompted the Kemalists to transfer the capital from Istanbul. Instead of being at the centre of the vast Ottoman Empire, Istanbul to-day is placed at the extreme north-western corner of the new map of Turkey. Though situated on an important international highway, the Straits Agreement of Lausanne, 1923, demilitarised the passage and kept it open in times of peace and war to foreign merchant and naval vessels. Hence, Istanbul became vulnerable, though by the Montreux Agreement of 1936 this condition was changed in Turkey's favour.

Besides, Istanbul was separated from the natural resources of the country and New Turkey having departed from her feudal past and bent upon developing the country, could not afford to have a capital at a great distance from the seat of its activities.

Not only is Istanbul away from the mass of the population from whom the Government derived its strength and power but at critical moments, is has become a point of insecurity owing to its international character and the presence of elements foreign to the nature of the Turkish people

Modern Istanbul

But Istanbul has not been reduced to a second class city. It is still one of the most well-known cities of the world, and the most celebrated Turkish city known to the outside world. Under the influence of its mild climate, the conveniences and luxuries of a relaxing life on the Bosphorous. Istanbul attracts the more prosperous section of the population. The President of the State spends many weeks each year in Istanbul and the city is frequently visited by members of the Government. The city is a study in contrasts, and in many reflects the [illegible]

still maintains the relic of the by-gone and harmonises it in a peculiarly attractive fashion all that is modern in western life. On the surface it is a city living on its past. Here, at first sight, the traveller from the West, comes to the East. And here the pilgrim from the East comes to his journey's end. The palaces with their windows and balconies, the mosques with their domes and minarets stand side by side with Leandar's tower and the modern buildings.

The streets are narrow and roughly cobbled, the muezzins calling the faithful to prayer: the shops are small with the squatting craftsman at work. But here too is the glittering shop-window offering the latest fashions from New York and Paris, the girls in skirts and youngmen in smart European dress. It is a veritable bewilderment for the traveller. In the palace of the Sultan, he will be a sightseer inspecting the relics of a fallen empire, and when he emerges he will be confronted by modern buildings that might belong to Hamburg or Lille.

Mercantile Centre

Istanbul is the mercantile centre of New Turkey. It is not only situated on one of the most important sea-routes of the world, but from the point of view of Turkey, it remains the link between the two seas and the most important gateway to Anatolia. All the important banking and commercial houses have their headquarters in Istanbul, though such is not the case with Ankara.

That is why Istanbul is still growing. Various great new enterprises were started and some of them already completed under the new regime. Private and public building activities may here be mentioned: extensive sewage works have been undertaken, the street car and telephone network developed, numerous blocks for residential purposes erected and new squares created. Roads and bridges are being improved and extended in an up-to-date manner. The water-supply and other public utilities are being re-organised, including ice-factories, flour mills, slaughter houses, etc.

Buying Off Foreign Concern

One of the obstacles in the way of progress under the old regime was the heavy financial liabilities of the Government to foreign concerns. Turkey, like Egypt and India, was at one time, a happy hunting-ground for European financiers. They would sink millions in the different enterprises of the country and force the government to guarantee a profitable return for their investments. An international financial control was established over the Ottoman Empire in 1881. Certain sources of revenue were put under this control, and more than half the revenue of the country was absorbed in the payment of interest on the foreign loans. But the total of foreign indebtedness rose higher and higher, until the whole economic life of the country was mortgaged. H. Feis, the author of *Europe: The World's Banker*, referring to the period after 1908, says:—

"An organised large-scale enterprise was dependent upon it and owned by it. The Turkish banking system was entirely foreign and foreign banks conducted the official business as well as private business. The railroad was financed almost entirely from outside as were irrigation works, ports and bridge construction, mineral exploitation and municipal public utilities."

For the builders of New Turkey, this was a serious problem. To free the country meant not only freedom from the out-worn shackles of Ottoman imperialism, but the financial yoke of foreign capital as well. And it redounds to the credit of Kemalite Turkey that foreign investments to-day are under governmental control and are not allowed to possess extra-territorial rights.

Muniripal undertakings still in the hands of foreign companies are gradually being acquired. This is particularly true of Istanbul, which at one time was also the seat of foreign capital. In 1935, a beginning was made with the French Quay Company, whose property was bought up by the State for £T 10,000,000. In 1936, the Belgian Telephone Company Concessions were re-purchased. The Derkos Water Supply Company was transferred to the city authorities. The Gas Works belonging to an English owner, have been purchased by the State. The antiquated Golden Horn Shipping Company, which was in financial difficulties, was forced to discontinue its activities in 1935 and was later taken over by the Muni-

ST. SOPHIA.

St. Sophia is the glory of Byzantine Art. Originally a Christian Church, first built in fourth Century A. D. it was converted into a Moslim mosque when the Turks conquered Constantinople in 1453 a minaret being erected at each of the four exterior angles of the building.

cipality which ran it at a profit, thereby indicating the productive possibilities of the undertaking when under national management.

Reconstructing Istanbul

Side by side with the building of New Ankara, out of the malarial valleys of old, Istanbul was also renovated. After an open competition, three architects were chosen, two French and one German, Agache, Lambert and Hermann Enlgotz. The work was however entrusted to the French Architect Proust, whose project is now being carried out. This combines the most modern improvements in technical, sanitary and traffic problems with due regard for the natural and historical beauties of the town.

Improvements

Interesting projects for the building of a Conservatoire, a modern theatre and a second iron bridge across the Goldern Horn were discussed for a number of years. Hans Poelzig, a German Architect, has designed the Conservatoire, while the theatre too has not been neglected.

But the most important of the three is the bridge across the Golden Horn. It is designed by a French engineer, Pijaud. It is being built at a cost of £T. 1,600,000 and ornamented with sculptors. This is the famous Ataturk Bridge. The old outer harbour has been enlarged on both sides and the scheme for a new harbour is also under discussion.

The drainage work of Istanbul was entrusted nine years ago to a German firm, but it was discontinued after some time. But the sanitation of the more densely populated areas has not been neglected.

Public Buildings

The State undertakes to protect the museums and places of historical interest. They are all kept in splendid condition. The old palace of the former Ministry of Justice, which was destroyed by fire a few years ago, is being rebuilt. The buildings are augmented every year from the inaccessible treasures of the old Treasury House. Thousands of visitors are attracted every year from all parts of the world, and this is helping a rapidly growing tourist traffic. A programme for systematic improvements and repairs for buildings of historical and cultural improvements has been drawn up by the municipal authorities in conjunction with the Government. The buildings of the Sublime Porte have already come under attention.

St. Sofia

We shall end our article on Istanbul with a reference to the famous mosque of St. Sofia for no description of Istanbul is complete without it.

Saint Sofia, as the oldest and most splendid monument of early Byzantine Art and a former Christian Church, has always attracted the interest of the civilised world. The building tells us the story of Istanbul's past in a nutshell. Beginning as the centre of Christian worship in the Byzantine period, it was turned into a mosque by the Islamic conquerors. But now it has been converted into a public museum by the radical policy of secularisation under Kemalist Turkey. A few years ago, while under repairs, the walls of the building revealed magnificent mosaics which had been formerly covered with paint. A specialist in the line, Professor M. Whitemore of the Boston Byzantine Institute, was appointed for the task of uncovering the mosaic. His work has brought to light the most surprising and wonderful specimens of ancient Byzantine mosaic art, glowing with brilliant colours.

This remarkable blending of two historic cultures for which St. Sofia stands really embodies the spirit of Modern Turkey and adds to the grandeur that is Istanbul.

—Scientific Advisory Board

(*Continued from page* 629)

The question of maternity and child-welfare of the City in all aspects is expected to be dealt with by another Committee.

The Sanitation Committee will deal with and suggest measures of improvement concerning the question of keeping streets clean, the system of collection, transport and disposal of refuse; the problem of drainage and river pollution and the question of *bustees* and suggest all measures concerning these.

The Physical Fitness and Recreation Committee will deal with the question of improving and using the public parks and the *maidan* for purposes of mass drills, gymnastics, etc., and suggest measures for the promotion of the health and joy of the children and school and college-going population.

It is proposed that the sugestions put forward and recommendations made by these Committees will be co-ordinated by the Scientific and Technical Advisory Board which will frame final proposals for consideration by the Corporation.

Sewerage—From Antiquity To Modern Times - II

(Concluded from the issue of 15th March, 1941)

LABORATORY TESTS FOR THE SEWAGE PLANT OPERATOR

[By Richard Pomeroy, *Chemist and Bacteriologist, Harbor City, California*]

Some operators have taken very seriously the matter of keeping records of their plants, and have obtained Imhoff cones, pH sets, thermometers, etc. A better understanding of the variety of the tests and what their results means is needed. Not fewer tests, but more intelligent tests should be made.

Records of plant performance should indicate when additional capacity is needed. Imhoff cones should tell the operator what removal is occuring in a primary sedimentation or Imhoff tank.

If representative samples of raw sewage can be obtained, tests once a week or even once a month for the average plant are sufficient. In most cases, it is almost impossible to get a true average sample of sludge pumped from a plain sedimentation tank. To assist in this case, the sludge should first be removed into a collecting tank after which the concentration and volume removed can be determined. Grease and sulfide tests are sometimes desired.

Gas meter readings should be made daily. Gas production per pound of volatile solids added is often used to rate the performance of digesters. Volatile acids in sludge liquor is a good test of digestion, but of no value in small, one-stage digesters. If the pH is below 7.0, the tank is too sour. When above 7.0, the test can be omitted as a routine. Nitrogen content is better to use than volatile content, where sludge is used for a fertilizer.

Sludge concentration tests may be occasional where the operating conditions are efficient, but an irregular discharge of industrial waste may require daily tests, if not more often. Tests for suspended solids in aeration tanks need be made only occasionally for control purposes. Dissolved oxygen content of 1 to 2 ppm. is sufficient, and when above 4 ppm. the air supply may be reduced in activated sludge plants. B.O.D. removal and suspended solids in the effluent are valuable tests.

THE COVINA SEWAGE TREATMENT PLANT

[By Adlof H. Koebig, Jr.]

The Covina Sewage Treatment Plant uses biological and chemical processes for treatment of the sewage from a city of 8,200. The plant is located in a tenacre orange grove with full grown trees. The plant provides wells for underground disposal of the effluent from the plant.

SHAW WALLACE & CO., CALCUTTA

The plant designed for 5,000 people required (1) odor control, (2) treatment to a high degree of stability to allow percolation in underground wells without contamination, (3) flexibility for primary, secondary, and complete treatment, and (4) good sludge digestion. Chemical flocculation, rapid sand filtration, sterilized effluent, odor control and a two-stage sludge digestion were factors in the plant.

Ferrous Chloride application is planned for odor control. Digested sludge is dried on open sludge beds. All electrical fixtures were made explosion-proof on request of the State Industrial Accident Commission.

Due to the laundry waste discharged into the sewers, the continuous operation of the complete plant has been required, as the turbidity of the laundry waste has been difficult to remove without final flocculation and filtration. The percolation wells average 65 feet in depth, and the rate of percolation has averaged 60 gallons per square foot per day. The water level has not exceeded 20 ft. in depth.

R. F. Goudey of Los Angeles considers, that the effluent from this plant to be the most clear and stable effluent of any permanent plant he has ever seen and that the Covina plant has met all expectations of the designer.

THE SEWAGE SITUATION OF LOS ANGELES, CALIFORNIA

[By Franklin Thomas, *Prof. of Civil Engineering, California Institute of Technology*]

Los Angeles is confronted with a condition that has become increasingly acute during recent years. The plan of relief proposed would be by progressive steps as the sequence of work is determined and funds are provided. The paper gives the population tributary to the North Outfall Sewer of Los Angeles as it traverses its way from its upper end in the San Fernando Valley to its outlet into the ocean at Hyperion, also the density of population in the several areas benefited thereby, and the amount of flow thus contributed. Reference is likewise given to the future population which will be tributary to the Hyperion plant from the city and outside areas.

To protect the beach frontage at Hyperion, the paper suggests that treatment plants in three widely separated sections may be installed—one along the Los Angeles river below Van Nuys, another near the river and adjacent to the industrial district southeast of and below the City of Los Angeles, and a third adjacent to the Baldwin Hills, the effluent from which might be discharged into Ballona Creek.

Prof. Chas. Gilman Hyde of the University of California recommends that lands for the three treatment plants should be immediately acquired by the city. A provision for the next three or four decades with a minimum of immediate expenditure is considered to be one that has the greatest merit. It is apparent that there is no single or simple solution of the problem of sewage treatment and disposal for this great metropolitan area.

POPULATION CONTROL WORK OF THE CALIFORNIA STATE DIV. OF FISH AND GAME

[By Paul A. Shaw]

As no interstate contracts exist, the California State Division of Fish and Game is limited to the following control methods: (1) Enforcement of Federal Laws, (2) Enforcement of State Laws, and (3) Injunctions or Private Damage Suits.

Under the Federal Law, where navigable water may be affected, action can be taken to prohibit the discharge of oil from vessels or refuse from vessels or shore plants exclusive of that flowing from streets and sewers in a liquid form.

The Public Health Act of the State and Section 481 of the Fish and Game Code provide means of pollution control. The Public Health Act is, however, weak in enforcement features, so that raw sewage from many cities is discharged into navigable waters without restriction. On the other hand, the Fish and Game Act restricts pollution Control of fish, plant life and bird life. In 1939, due to low stream flows, many fish in the Mokelumne River were killed after the winery season opened. The wastes from such industries and also those from celery packing plants have been subjected to control. Disposal of waste from the fruit and vegetable canneries in the Valley and Bay areas directly into State waters or through sewers thereinto is now subject to some control. Agreements between the State and the operators have been made to have such wastes disposed on land, thereby eliminating pollution of State waters.

In the fishing industries, the "stick water" is the principal pollution load after removal of the fish oil and meal in the reduction process. Recent studies show that the pollution from this source can be reduced 70 per cent. through a coagulation process using sulfuric acid. In the Bay district, the pollution from this source is equivalent to raw sewage from a population of five million during peak fishing days.

ELECTRICAL EQUIPMENT IN SEWAGE PUMPING AND TREATMENT PLANTS

[By Frank A. Short, *State Industrial Accident Commission*]

The National Electrical Code contains requirements as to electrical wiring and equipment in hazardous locations. The cause of these hazards are (1) Flammable liquid gas and vapors. (2) Combustible dusts. (3) Easily ignitable fibers. The Electrical Safety orders of the State Commission apply to sewage pumping and treatment plants. Explosions in various sewers and sewage plants in California are cited in the paper, also in other parts of the United States. As a result of damages and casualties from such a source, ordinances and regulations prohibiting the disposal of flammable liquids into sewers have been adopted by many cities, and their number is constantly increasing.

A survey of four years ago to determine the amount of flammable solvents discharged into

sewers in a California country by the cleaning and dyeing industry showed 860 gallons of free naphtha were so disposed in one day.

The Conference concluded its first day's session and re-assembled at a banquet in the Mirror Room of the St. Catherine Hotel. Following the banquet, the Conference had much pleasure in listening to its guest speaker, Dean W. Ballentine Henley of the University of Southern California.

THE MAINTENANCE OF SANITARY SEWERS SAN DIEGO

[By Byrl D. Phelps]

San Diego has 525 miles of sewers serving a population of 180,000. The Sewer Division has the work of maintenance of these sewers, also the matter of connections thereto. Maintenance problems at the outfall anchorage are caused by disintegration of the iron rails used for this purpose, which permitted sand to enter the sewer.

Settling tanks along the ocean become overloaded with sludge and its removal can only be done with the use of pumps or a hose to break up the solids. Odors at vent pipes have been a problem, partly overcome by the use of ferric chloride at the pumping plant. A vent disguised as a flag pole is an asset.

Carl M. Hoskinson of Sacramento brought out his experience in charge of the Sacramento sewers where the combined system is used. The disposal of sewage into the Sacramento River requires pumping into the current to avoid sludge deposits on sand bars. Coal tar enamels are used to prevent corrosion of metals in pumping plants. Fine screens to protect the pumps should not be carried to the point where the resultant screenings become excessive.

Following these papers on Maintenance, brief talks by several plant operators were given. These operators related their experience at the treatment plants both with and without the use of gadgets.

A. E. Fiscus of the Terminal Island plant of the City of Los Angeles considered that any plant is only an assembly of gadgets placed in proper sequence. At his plant, he has those gadgets which provide for sweep-timing, odor control, pump priming or degasing, level indicators for the decanters, gas control, and anti-electrolysis equipment.

The sweep-timing gadget caused a pump to operate only as sweeps in the 80-foot Dorr Sifeed approached the pocket, and then be inoperative until the next sweep approached. Odors from the clarifier were overcome by decking it over and installing burners furnished with gas from the plant.

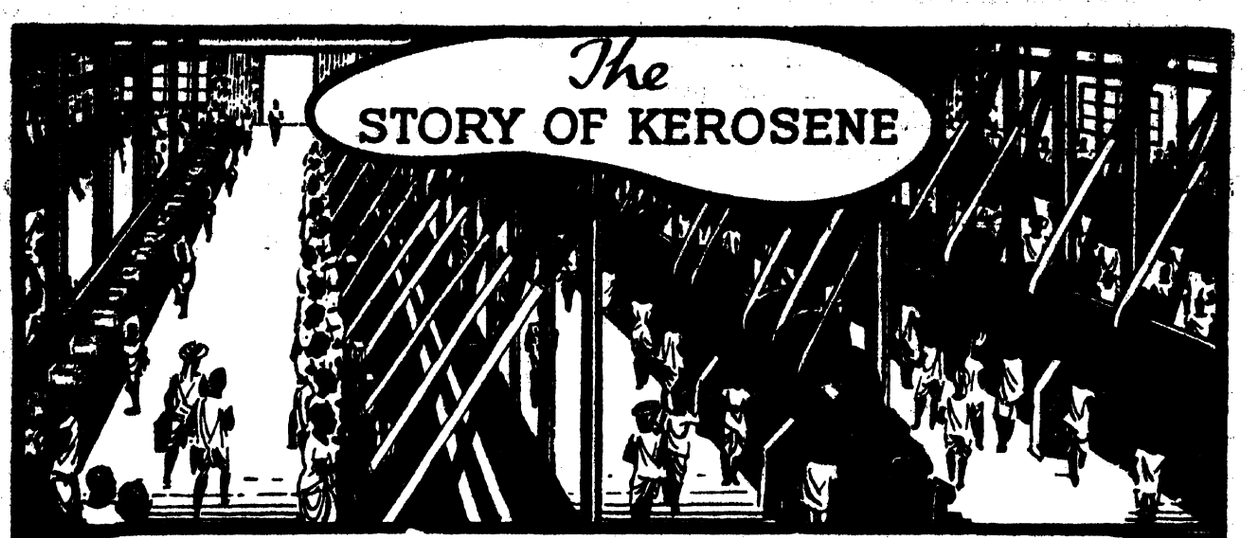
C. F. Tennant of the Los Angeles County Sanitation District stated that sludge beds afforded the cheapest and possibly the best method of de-watering digested sludge in this locality. The standard underdrained sand bed with no covering is the most common in use. Troubles are sand removed with the sludge, flies and odors.

R. D. Woodward of Laguna Beach stated that he has problems caused by the great fluctuation in flow due to the large influx of population during the summer and over week ends.

Verner C. Johnson of Covina has found out that, as was also found by A. E. Fiscus, a much thicker sludge could be removed from the clarifier by pumping only when the plow or sweep approached the hopper.

At Palo Alto, Harold L. May has had trouble with the excessive scum formed in the digester, due to cannery wastes. This situation was bettered by the installation of a screen at the cannery, but this screen with ½-inch square openings is ineffective in retaining tomato skins.

ANDREWS MEMORIAL FUND

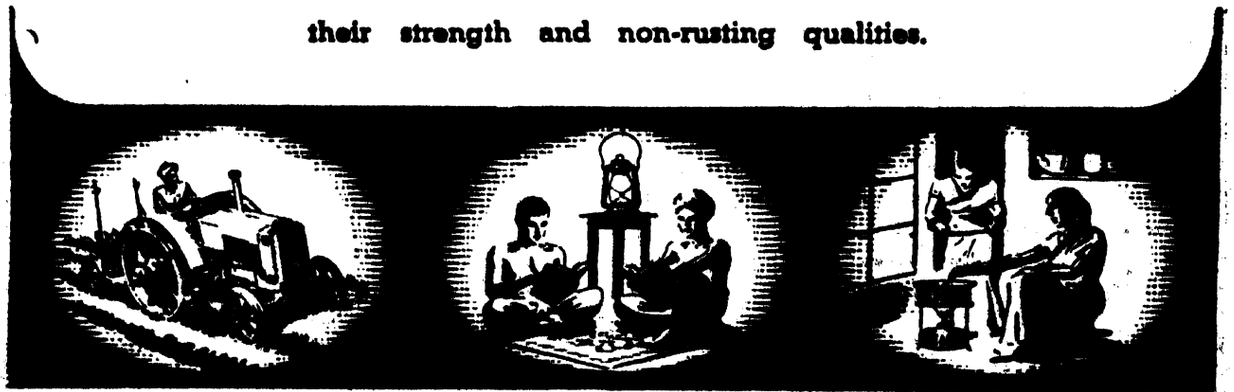


Gandhiji's Appeal

Mahatma Gandhi has issued the following appeal to the Press :—

"The handsome public response to the Kamala Nehru Memorial Hospital, though late yet not too late, prompts this appeal. Even as I had made that collection my special duty because of the promise made by me to Kamala when she went to Europe, as it turned out to meet death, so is incumbent on me the duty of collection for the Andrews Memorial. I might have failed in collecting for the Kamala Memorial but for the tireless labours of Dr. Jivraj Mehta, I have no counterpart to Dr. Jivraj Mehta for the Andrews Memorial collection.

The first anniversary of Deenabandhu's death will be soon upon us. I am too weak and too occupied to travel about for collections. What is, however, tantalising is the fact that the collection have not been coming promptly and spontaneously. Charlie Andrews was everybody's friend in need. He made no distinction between the high and the poor or Christians and non-Christians or Englishmen and others. He ungrudgingly assisted all who were in need of his help. He slaved night and day for humanity. He found his home and self expression in Santiniketan. Dr. Rabindranath Tagore was his *Guru* and friend. Living he was the chief collector of funds for Santiniketan. No more fitting memorial could, therefore, be conceived than that his home should never be in want and that it should have additional funds for expansion. Indeed, the *Gurudev* himself should command all the monetary help he needs. He has brought lustre to India. Many men have derived signal assistance from him and his institution. Their children are receiving instruction in Santiniketan. His art decorates many an Indian home. His poetry, his novels, plays and his art enrich the minds of thousands of boys and girls, men and women.



It is a problem why these two precious names have not brought forth spontaneous response. Why should there be special appeals made on behalf of a memorial which is its own compelling recommendation. A spontaneous response will delight Deenabandhu's spirit and put new life into Rabindranath Tagore. What answer have students and teachers, friends of labour and lovers of art to make? Among them they can produce the paltry five lakhs in a day. Will they produce the amount before the 5th April, the day on which Deenabandhu, that true friend of the poor, took sleep from which he never awoke?"

No. 2 TIN MAKING

The Kerosene tin plays many important roles in India. After serving as the principal receptacle for Kerosene, it is used again and again for a multitude of purposes.

Burmah-Shell manufacture their own Kerosene tins. A daily output of 80,000 four gallon tins and 7,500 one gallon tins is average and thousands of tons of Indian made tin-plate are used annually. The tins made by Burmah-Shell are well-known throughout India for their strength and non-rusting qualities.

CALCUTTA NEWS & VIEWS A Digest

NEW A. R. P. COMMISSIONER

Mr. A. S. Hands, I.C.S., Secretary, Agriculture and Industries Department, Government of Bengal, has been appointed A. R. P. Commissioner, Bengal Circle *vice* Mr. N. V. H. Symons, I.C.S., on leave.

CALCUTTA'S NEW CORONER

Mr. Azizul Haque, Barrister-at-law has, it is understood, been appointed Coroner of Calcutta in succession to Mr. A. C. Dutt, Barrister-at-law (son of the late Mr. R. C. Dutt), who is shortly retiring.

CHARCOAL-DRIVEN MOTOR VEHICLES

About a dozen public vehicles of which two are motor buses and the rest lorries, are running in Calcutta with charcoal as fuel. The *United Press* understands that orders have been placed for a few more engines to make the experiment on a comprehensive scale.

SAND BAG ORDERS

The Government of India have placed a further order for 27 million sand bags with the Indian Jute Mills Association, Calcutta, to be supplied in 8 monthly instalments.

NEW HIGH COURT JUDGE

The Hon'ble Mr. Justice Costello, KT . a Judge of the Calcutta High Court, at present on leave, having retired from service with effect from 15th March, 1941, the Governor-General has appointed the Honourable Mr. Justice Akram who was acting in the leave vacancy to continue to act as a judge of the said court, until further orders, in the vacancy thus caused, states a Press *Communique*.

COLLEGE OF PHARMACY IN CALCUTTA

The College of Pharmacy Committee, appointed by the Government of Bengal, has submitted its report to the Government.

The Committee which was appointed in January, 1939, with Sir R. N. Chopra, as Chairman, strongly recommends the establishment of a College of Pharmacy in Calcutta.

Members of the Committee include Dr. B. C. Roy, Sir U. N. Brahmachari, Professor B. N. Ghosh, Mr. P. Das and Dr. B. Mookerjee (Secretary).

"MAHAJATI SADAN"

At a meeting of the Mahajati Sadan Committee held at No. 1, Woodburn Park, on the 17th March it was decided to take steps to have the order, for attachment and appointment of Receiver made on the 12th March, by the Additional Chief Presidency Magistrate in respect of the leasehold premises No. 166, Chittaranjan Avenue (Mahajati Sadan), vacated and to have the attachment removed and a resolution to the effect was passed unanimously.

Mr. Sarat Chandra Bose, the Secretary of the Committee, was requested to do the needful in the matter.

OBSTETRIC CONGRESS

Dr. N. A. Purandre of Bombay will preside over the All-India Obstetric and Gynaecological Congress, which will begin in Calcutta on April 10. The Governor of Bengal is the patron of the Congress.

A Reception Committee has been formed with Dr B. B. Mukherjee as Chairman, and Dr. J. Chakraverti and Dr. P. C. Das, as Secretaries.

The Nawab Bahadur of Dacca, Minister of Public Health, Bengal, will open the Medical Exhibition to be organized in this connexion.

A Maternity and Child Welfare Exhibition, organized by the Calcutta Corporation, will be held simultaneously with the session of the Congress. Sir Mangaldas Mehta of Bombay will open this exhibition on April 11.

BENGALEE MOSLEMS AND THE CORPORATION

A deputation of Moslems waited on Nawab Bahadur of Dacca, Minister for Local Self-Government on Monday last and placed before him certain grievances of Bengalee Moslems, whom the deputationists claimed to represent, in regard to matters relating to the Calcutta Corporation.

The deputationists stated that they were suffering a good deal for want of proper representation of Bengalee Moslems on the Corporation and requested the Minister to fill the two nominated seats now vacant, by Bengalee Moslems.

The Minister, it is stated, gave the deputationists a patient hearing and promised to consider the matter.

The deputation consisted of the following :—Mr. Syed Habibur Rahman, Maulvi Musahibuddin Ahmed, Maulvi Nurul Huda, Maulvi Mohammad Osman Ali and Maulvi Latfar Rahman

PAGEANTS FOR DEFENCE LOANS

Floating pageants are to be organized by the Calcutta War Committee to popularize defence loans. These will be staged on the city's public tanks.

The pageants will take the form of huge decorated and illuminated swans or replicas of the Taj Mahal and other historic buildings in India, bearing the slogan "Buy India Defence Loans" in bold characters in English and in different vernaculars.

The authorities propose to start with the College Square and Cornwallis Square tanks, and have already applied to the Calcutta Corporation for necessary permission to use them.

Other tanks on which pageants will be staged are the Dalhousie Square tank, the tank on the Maidan opposite Lindsay Street and the tank by the side of St. Paul's Cathedral.

STUDENTS' CONFERENCE

The Fourth Session of the Bengal Provincial Students' Conference was held at the University Institute Hall on Saturday last under the presidency of Dr. H. C. Mukherjee, M.A.

About 500 delegates from different parts of the province, besides a large number of ladies participated in the deliberations.

In his inaugural address, Mr. Sarat Chandra Bose said :—"I hope, in organising themselves, the students will not overlook the paramount and overriding importance of unity. Unless they can present a solid and united front, all their idealism, all their fervour, all their ardent desire to serve their country and people will go in vain. They must resist internecine strife; I do not expect that there will be no differences of opinion over programmes and policies in an organization democratically organised. In fact, free expression of dissent is of the very essence of democracy. But in order to secure effectiveness of action, free choice must not be allowed to degenerate into disunity. Dr. H. C. Mukherjee said that differences of opinion between teachers and students were due "as much to the unwisdom of the authorities as to the unwisdom of the students."

CALCUTTA CUSTOMS AND TRADE DISCOUNTS

The way in which trade discounts are deducted by the Calcutta Customs authorities in assessing goods to duty on wholesale market price and the losses that the mercantile community particularly the importers in the City have incurred because of the current practice, had been brought to the notice of the Secretary, Central Board of Revenue, Government of India, in a communication addressed to him by the Committee of the Marwari Chamber of Commerce, Calcutta.

The Committee refer to the practice prevailing in Bombay, where the percentage of trade discount deducted by the Customs authorities when assessing goods to duty depends on the articles in question such as grey cloth printed cloth, or bleached cloth and point out that the Calcutta Customs authorities deduct trade discounts while assessing goods irrespective of the class at a flat rate, which, the Committee feel, is manifestly insufficient and unjust

The Committee request the authorities to make an inquiry into the matter and issue necessary instructions to increase the rate of discount so that the Calcutta piece goods market may not find any difficulty in competing with that of Bombay, and thereby check further diversion of a large portion of Calcutta's trade to Bombay, where importers and merchants enjoy better facilities so far as Customs affairs are concerned

THE BEGGAR PROBLEM

The urgent need for undertaking legislation to deal with the beggar problem in Calcutta was stressed by Dr. A. C. Ukil, speaking at the weekly luncheon meeting of the Calcutta Rotary Club at the Great Eastern Hotel on Tuesday last.

Dr. Ukil said that the Calcutta Rotary Club took up the question of beggar nuisance in the city in 1934 and studied the problem in all its aspects. They estimated that of a probable population of 4,000 beggars in Calcutta, 25 per cent. were lepers; 10 per cent. blinds; 5 per cent. paralytic; 5 per cent. suffered from miscellaneous diseases; and 5 per cent insane, deaf and dumb. Half the beggar population were found to be able-bodied. Only one-third of the total number belonged to Bengal, the rest coming from other provinces. The number of females was half of that of males.

After describing the steps taken by the Rotary Club to deal with the problem, Dr. Ukil said that a Vagrancy Bill was drafted at the instance of the Club. The Corporation of Calcutta approved the scheme outlined in the draft Bill as amended by its Beggar Problem Sub-Committee and was prepared to undertake proportionate financial liability with the Government. The general consensus of opinion at all the Conferences and Committees which considered the subject was that the Bill should be introduced as a Government measure.

In the course of the discussion that followed the Mayor (Mr. A. R. Siddiqi) referred to the various aspects of the beggar problem in Calcutta and said that if the Municipal Corporation, the Rotary Club and other organizations interested in this matter, approached it with courage and determination, there was no reason why it should not be solved at an early date.

The Nawab Bahadur of Dacca after stressing the difficult nature of the problem assured the Club that he would take early steps in the matter.

LIFE AND RELIGION

"Is religion a spent force?" was the subject of an address by Sir Sarvapalli Radhakrishnan at the Royal Asiatic Society of Bengal, Calcutta, on Saturday last.

Sir Radhakrishnan said that it was because religion was employed either as a method of escape from the jarring problems of the world as a weapon of defence of established interests, that it made little appeal to the adult minds of to-day.

The popular interpretations of such fundamental concepts as *maya* and *karma* and other worldly bias obstructed all efforts to wrestle with the problems of life with faith or confidence So the intellectuals were coming to believe that religion as practised to day was either an oppressive dream or an enervating drug And yet it was not possible for them to live without religion The spirit of man abhorred a spiritual vacuum If it lost the inspiration of true religion it accepted whatever it could lay its hands on—Communism Fascism, Hitlerism, humanism or the crudely pagan philosophy of mere sense of life

The need of the age was a living religion which did not require them to give up their intellectual conscience and at the same time, helped them to challenge the vested interests and rebuild the world on more equitable foundations

SOCIAL REFORM AND JOURNALISM

Eloquent tributes to the services of Mr. K. Natarajan, Editor, *Indian Social Reformer* (Bombay) in the cause of social reform in India were paid by several speakers on the occasion of his seventy-third birthday, at Calcutta on Sunday last. The meeting was organized under the auspices of the Bangiya Samaj Vijnan Parishat (Bengali Institute of Sociology) and was held at the Calcutta Dental College Hall. The Hon. Mr. Justice C. C. Biswas presided and there was a large and distinguished gathering.

Madame Sophia Wadia of Bombay, Editor, *Aryan Path* and *Indian P. E. N.* was the principal speaker.

The main characteristic of Mr. Natarajan's services, she said, was his assiduous and disinterested devotion to the cause he had taken up Social work in this country was one of the most difficult tasks and required not only an intimate knowledge but also a sympathetic heart. It was a task to reform and reshape, in which all the aspects of human understanding must play their part. Mr. Natarajan had all the

human touch which grew out of his love for the motherland. He took upon himself the task not only of a writer but also of an educationist and a teacher.

Madame Wadia also referred to the various difficulties of journalism in India where the masses of the people were illiterate. Any form of social work, she said, must reflect the aspirations of the masses and bridge the gulf existing between the illiterate villagers and the literate people of the towns and cities and try to bring them nearer to each other. They must also try to understand the past and yet not be dominated by it but apply the knowledge to the understanding of the present conditions. All this was also to be seen in the light of the conditions of the world at large, so as to bring about a new world where exchange of ideas and sentiments would give great inspiration to the service of social reform. This was the spirit in which Mr. Natarajan had been carrying on his work of reform and thus rendering a great service to the cause as well as the country.

Prof. Benoy Kumar Sarkar, Lieut. Col. A. C. Chatterjee, Professor Humayun Kabir, and the President (Mr. Justice C. C. Biswas) also spoke on the various aspects of the social reform and associated themselves with the tributes paid to Mr. Nataranjan.

Principal Dr. R. Ahmed of the Calcutta Dental College was "at home" to the guests.

GOVERNOR'S CONFERENCE

The Party Leaders' Conference convened by His Excellency the Governor of Bengal for effecting improvement in the communal situation in the province met for the third time on Tuesday last at Government House after a week's interval. Dr. S. P. Mookerjee attended the Conference for the first time.

It is understood Dr. Mookerjee apprised the Governor of the communal situation as he came to understand it from his tours in the province.

The Conference met again on Wednesday.

Among the subjects discussed were the communal riots that have recently taken place in Khulna and Dacca districts. Although full details are not yet known, the Conference was unanimous in its desire to express its regret that such occurrences should have taken place and its sympathy with the relatives of persons who have been killed and with persons who have been injured.

The Conference was assured by the Government that the local officers in the districts concerned were doing their utmost to restore normal conditions and appeals to leaders of all communities to co-operate whole-heartedly in the restoration of peace and harmony.

DEGREE EXAMINATION IN GEOGRAPHY

A degree examination in geography will be held for the first time in the history of the University of Calcutta this year at which about 50 students including four women are going to appear. The course was started in the University two years ago, and it is now proposed to introduce the subject in the post-graduate department also.

The syllabus for the study of the subject in the post-graduate department has been drawn up by a Committee consisting of Mr. P. N. Banerjee, Dr. C. S. Fox, Mr. K. Zacharia, Dr. H. Thomas, Dr. B. N. Mukherjee, Dr. S. P. Chatterjee, and Mr. D. R. Mitter. The Committee has tried to combine regional treatment with treatment through sections of the subject. Besides the four compulsory papers on geomorphology and climatology, principles of plant, economic and human geography, regional geography of India and adjoining countries with a fuller treatment of one small region to be prescribed from time to time by the Board of Higher Studies in Geography, a special subject, mentioned in the syllabus, will have to be read by the candidate.

The syllabus has earned the approval of many a well-reputed authority of geography among whom may be mentioned Prof. H. J. Fleure, F.R.S., of the University of Manchester, Prof. C. B. Fawcett of the University of London, and Mr. K. H. Kivig of Birmingham University.

While the Trignometrical Survey of India and the Meteorological and Agricultural Departments have expressed their desire to co-operate in the new move, the Geological Survey has already informed the University that it may employ some of the successful students in geography in its own Departments.

CIVIC NEWS FROM FAR & NEAR

INCREASE IN NAGPUR'S POPULATION

According to the provisional cencus figures, the total population of Nagpur District is 1,060,000, representing an increase during the last decade of 18 per cent. In the city of Nagpur an increase of 40 per cent. is shown, the population totalling, 303,483 as against 215,165 in 1981.

ASSAM MATERNITY BENEFIT BILL

The Select Committee on the Assam Maternity Benefit Bill has submitted its report. The Committee held two sittings under the presidency of Maulvi Abdul Matin Chaudhuri, Labour Minister, Assam, and all the members were present.

A principal amendment made to the Bill by the Committee whereby it has been laid down that the question whether a plantation comes under the Act should depend upon the number of women and not the total population. In the conditions of Assam, the Committee considers the minimum number provided, ten, will approximate to the criterion in the Factories Act.

BANGALORE MUNICIPAL BUDGET

Presenting the budget estimates at a meeting of the Bangalore Cantonment Municipal Commission the president, Mr. H. H. Carleston, referred to the municipality's war effort. During the past year they had given Rs. 8,000, including Rs. 1,000 for relief of air raid victims. The Municipal Commission had also invested Rs. 1,69,000 in defence loans.

Receipts from purely municipal funds in the revised estimates for 1940-41 were Rs. 11,08,782 and the expenditure Rs. 10,72,821, leaving a surplus of Rs. 86,461. In the estimates for 1941-42 the expenditure provided for from purely municipal funds was Rs. 11,01,258 against receipts of Rs. 11,10,710.

MADRAS CORPORATION BUDGET

The budget estimate of the Corporation of Madras for the year 1941-42 which was presented to the City Council show the total revenue estimates to be Rs. 79,894,770 as against an expenditure of Rs. 7,895,470. Of the closing balance Rs. 15,000 would be carried over to the statutory balance as required by the Act and the surplus of Rs. 4,000 would be utilised for any unforeseen expenditure during the year.

TRUST SCHEME FOR MADRAS CITY

The Madras Government will shortly appoint an officer of the Indian Civil Service as Special Officer to formulate proposals for constituting an Improvement Trust for the City of Madras similar to the one in Calcutta.

The officer will proceed to Calcutta and one or two other centres to study the constitution and working of the Improvement Trust there. Necessary legislation in this connexion will be enacted on the report of the Special Officer.

FOR COMBATING MALARIA

In pursuance of their policy to help the different municipalities in the Province in successfully combating malaria in their respective areas, the Government of Bengal have, it is learnt, sanctioned the payment of Rs. 11,070 to ten municipalities in different districts. The sum will be distributed as follows :—

Chandrakona Rs. 600; Comilla Rs. 1,500; Kushtia Rs. 1,000; Arambagh Rs. 2,000; Burdwan Civil Station Rs. 1,000; Gobardanga Rs. 700; Natore Rs. 1,120; Bhatpara Rs. 1,000; Santipur Rs. 1,000; and Serampore Rs. 1,150.

UPROARIOUS MEETING

Uproarious scenes marked the proceedings of the Sub-Committee appointed by the Coimbatore Municipality to inquire into the breakdown of water-supply of the city some time last month.

It is reported that there were heated arguments between the members of the Sub-Committee which led to confusion in which, it is alleged, some members were assaulted.

The police were called but by the time they arrived the commotion had subsided.

ROADS CLOSED

The Uttarpara Municipality, Hooghly, has adopted a resolution, closing no less than 88 roads to the extra-heavy lorry traffic on account of the fact, as the resolution states, that the motor tax grants of Rs. 800 and odds given to them by the Government proved inadequate to keep these roads in motorable condition. The new order, which has not, however, affected the portion of the Grand Trunk Road, running through the municipality, will continue until April 30 next.

BENGAL LOCAL SELF-GOVERNMENT

AMENDMENT BILL (1941) UNDER CONSIDERATION

In the Bengal Legislative Council on Wednesday, Sir Bijoy Prasad Singh Roy on behalf of the Nawab Bahadur of Dacca, moved that the Bengal Local Self-Government (Amendment) Bill, 1941, be taken into consideration. Mr. Humayun Kabir moved for circulation and after some discussion the House agreed to take the Bill into consideration.

The bill seeks to provide for a special machinery for the decisions of disputes relating to elections held under the Bengal Local Self-Government Act of 1885, and at the same time oust the jurisdiction of civil courts in respect of such disputes as had been done in the Act relating to the administration of the Local Self-Government Act in the province.

It is further proposed that the principles of the bill when enacted into law should apply to election which have already been held and in respect of which disputes were still pending in civil courts so that the new boards to which the elections have been made may come into existence and function without avoidable delay.

Letters TO THE EDITOR

[The Editor does not hold himself responsible for the views expressed by the correspondents]

Abominable Practice At The Burning Ghat

To THE EDITOR, "CALCUTTA MUNICIPAL GAZETTE"

SIR,—Whenever clothings and beddings of dead persons are thrown in the streets of Calcutta by householders and when those things are carried with the dead bodies to the Burning Ghats, the undertakers at once carry them away. These abominable things are then reported to be sold to the poor at cheap prices after washing. The Corporation should enquire about the truth of this rumour.

It is an insult to Calcutta that such disgusting transactions are allowed without sufficient check. Detectives should be employed from time to time to report the actual state of things to the Health Officer or his representatives.

The relatives and friends of the dead persons should see that all the belongings of the dead persons taken with them are burned to ashes in their presence.—Yours etc.,

AN OLD RESIDENT.

The 10th March, 1941.

THE WORLD OF BOOKS

CALCUTTA 1940 : *By John Barry with a Foreword by Amal Home, Editor, "Calcutta Municipal Gazette", The Central Press, 1, Dacres Lane, Esplanade East, Calcutta, pp.* 300. *Price Rs.* 3-8-0.

A satisfactory guide-book is a rare thing. For the writers of guide-books may themselves be misguided as much by their own tastes as by their sources. Historical and topographical accuracy is not so difficult to attain. But it is not always possible to check the temptation of educating taste and exciting curiosity. To be useful a guide-book has ever to remain a guide-book only—a familiariser of unfamiliar things. A poet or for that matter a man of taste is not the writer of the best guide-book. He may wax eloquent over a statue which you can never like; he may be so ecstatic about a temple or a mosque that he will forget to tell you where it is situated Mr. John Barry in his *Calcutta* 1940 steers clear of unnecessary enthusiasm as well as of confusing inaccuracy. It would be a very useful possession for the citizens of Calcutta no less than for its visitors. For it is a mistake to suppose that a guide-book is meant only for strangers, and that it has no use for the inhabitants of the city it talks about. A sojourner usually knows more about a city than its permanent residents. For the movements of a permanent resident are ever restricted by practical considerations. He seldom comes out of his house but on some necessity. So he is concerned only with the present and immediate value of things. A temple is important for him only as the abode of his god—he has no desire to know anything about its architecture and antiquity. To him the presentness of an object exhausts its whole interest; he takes no delight in localising it in time. To him things lose all their engaging distinctions in a night of utility and contemporariness. A foreign tourist on the other hand enters a city with some feeling with which one opens a book of romance. He travels in time and thought as well as in space. Whatever he looks at is full of reminiscences of far-off things; even a new building is invested with a constellatory importance. The date of an old monument sends him into a momentary ecstasy, he pores over the indistinct inscriptions of a tombstone to revive an old grief; everywhere he feels the unimaginable touch of time. An ideal guide-book helps imagination by acquainting us with the history of things. A great English writer of our day who is also a great traveller says that the best guide-book is one that is copiously illustrated. Mr. Barry's book contains quite a large number of pictures which are excellently reproduced. A perusal of this book would change this familiar city of ours into a world of unknown region and unexplored regions. And the blind shall receive the sight. For the city of Calcutta contains a rich and inexhaustible fund of historic places connected with the fate of expanding empires and crumbling principalities with the great institutions growing out of various representative ideologies, with personalities, who dreamed and perished in its bosom

Calcutta Associations & Institutions

DARIDRA BANDHAB BHANDAR

"KIRANSASHEE SEBAYATAN"

The Hony. Secretary writes :—

The public will be interested to know that through the benefaction of Mr. Sudhir Chandra Nawn of Messrs. B. C. Nawn and Bros., Ltd., the *Kiransashee Sebayatan*, an X'Ray Clinic named after the wife of the donor, has been accommodated at the Daridra Bandhab Bhandar's own building at 105/1, Raja Dinendra Street, Calcutta. The clinic will offer great facilities for diagnosis and treatment of the diseases of the lungs. The *Kiransashee Sebayatan* is going to be opened shortly but the task of maintaining and developing it rests on the generous public who should come forward with generous contributions towards its upkeep. There is ample room for expansion of the undertaking. Any contribution, however small, in this direction will be thankfully received by the Secretary at the registered office of the Bhandar at 12/5, Nilmony Mitter Street, Calcutta.

CORPORATION SCAVENGERS AND LABOUR UNION

A meeting was held on the 2nd March under the presidentship of Babu Manmatha Nath Chatterjee in Wellington Street (Square) to consider the grievances of the

FEW PRICKS CAN SAVE YOU FROM SMALL-POX
GET THEM IN TIME

employees. The following resolutions were passed unanimously :—

"This meeting requests the Corporation to come to a early decision regarding the Dearness Allowance to the staff as the prices of everything are going up daily.

"On the notice of the Secretary to the Corporation of Calcutta about 4,000 labourers who were engaged after the strike placed their cases before the Committee but nothing has been done yet for them. The number 4,000 is made up as follows :—

Road Watering cooly	...	...	1,500
Workshop employees	...	...	250
Carters ...	...	...	600
Methars and Dhangars	...	...	1,650

"This meeting congratulates the Chief Executive Officer on the extension of his service for 2 years."

SIR GURUDAS GIRLS' SCHOOL

Prize Distribution Ceremony

The Prize Distribution ceremony of the Sir Guroodas Corporation Free Primary School, Narkeldanga, was celebrated recently at the school premises under the presidency of Mr. Satyendra Nath Majumdar, *ex*-Editor of the *Ananda Bazar Patrika*. A varied and interesting programme consisting of music, recitations, action songs and dance was gone through, and the guests, who included many distinguished ladies and gentlemen, were particularly impressed with the very successful rendering by the girls of Rabindranath's "Lakshmir Pariksha".

A large number of prizes including no less than eleven silver and one gold medal donated by the generous members of the public were awarded for general proficiency as well as for good conduct, sewing, cooking, music, etc.

The President in a neat little speech congratulated the staff and the students for their academic success and expressed the hope that not only in studies but also in the excellence of their character, the girls of the school would distinguish themselves and would become worthy members of the households where their future activities would lie. The function terminated with a vote of thanks to the chair by Mr. Haran Chandra Banerjee.

GRANTS TO AIDED SCHOOLS

At a meeting of the Executive Committee of Nisuika Siksha Prochar Samiti under the presidentship of Mr. K. P. Chattopadhyaya the following resolution was passed unanimously :—

"This meeting of Teachers of Aided Schools requests the members of the Primary Education Committee not to reduce the grants of poor schools on grounds of economy. If necessary, the grants of Schools with large incomes, say above Rs. 5,000 or schools with other important sources of income, may be reduced to secure the necessary economy."

VITAL STATISTICS

HOWRAH MUNICIPALITY

Tender Notice

Separate sealed tenders superscribed (1) Annual Tender for Printing Meeting Papers, (2) Annual Tender for Printing Forms and Registers, etc., and addressed to the Chairman, are invited and will be received by the undersigned up to 2 p.m. on Tuesday, the 8th April, 1941, for executing printing works for this Municipality for the year 1941-42.

Each tender must be accompanied by a Cashier's certificate to the effect that Rs. 100 in cash or its equivalent in Government paper have been deposited as earnest money on or before Monday, the 7th April, 1941 at 2 p.m., which shall be forfeited, if the accepted tenderer withdraws his tender or when his tender has been accepted neglects or refuses to sign a contract at his own cost for the above works within a fortnight from the date of acceptance of his tender, and to deposit 10 per cent. of the tendered amount as security.

Samples of various forms, registers, etc., required to be printed may be seen and all other particulars including approximate annual requirements may be had at the office of the Store-Keeper between the hours of 2 and 4 p.m. on working days.

Tender forms and schedules can be had at the Stores Department of the Municipality on payment of Re. 1/- (Rupee One) per copy.

Tender in any other form will not be considered. The Commissioners do not bind themselves to accept the lowest or any tender or to assign any reason thereof. The Commissioners may also accept a tender in full or in part.

Tenderers will please state whether they have Linotype Machine.

J. C. DAS GUPTA,
Secretary.

Municipal Office, Howrah,
The 15th March, 1941.

CORPORATION NOTICES

To Contractors

Tenders are invited in duplicate for the following and will be received by the First Deputy Executive Officer on the date noted for each, up to 2 p.m. Each tender in duplicate must be enclosed in a sealed cover and superscribed—"Tender for....." For specifications and tender forms apply to the Keeper of Records between 11 a.m. and 3 p.m. on week days and 11 a.m. and 1 p.m. on Saturdays. Price Rs. 2 per set.

1. Supply and delivery of one electrically operated Headstock suitable for 42 in. dia. sluice valve and two 24 in. double flanged sluice valves for use at Tallah Pumping Station.

2. Cutting and restoring trenches in public roads for laying water mains during 1941-42.

3. Supply of Mother Binders during 1941-42.

4. Supply of Unani Medicines during 1941-42.

5. Supply of Disinfectants during 1941-42.

Tenders for 1 and 2 will be opened on 27th March, for 3 and 4 on 8th April, and for 5 on 18th April, 1941. The rates quoted in tenders for the above are to hold good for three months.

N.B.—All cases of delay over a fortnight in the execution of agreements in respect of works and supply of materials will be reported to the Committee and the parties will not be allowed to execute the agreements after that period without obtaining orders of the Committee.

In case a party deposits earnest money by cheque, he must deposit the cheque at least three working days before the date of opening of the tender.

The contractors should maintain an uniformity of their names and styles of business, appearing on various documents, *e.g.*, Treasurer's receipts, tender forms, agreements, licenses and bills.

Any deviation from this on the part of any contractor whenever detected, will render his tender liable for cancellation.

Where tenders are submitted by a Corporation, it should be signed by a principal officer of the Corporation or by an agent duly authorised in that behalf and be attested by a witness. Where it is submitted by a firm, it should be signed by the proprietor or one of the partners or by an agent duly authorised in that behalf by the firm and be similarly attested.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 19th March, 1941.

When you stop advertising, this is what you say in effect:

"We hereby notify everybody that we do not expect to do business any more."

Municipal orders do not wait. All the 12 months, the municipalities are buying equipment and supplies and the "Gazette" advertisement will bring you results just as well as it will in March.

Keep up your advertising every month in the year if you expect to do business all the year around.

Health should not be made to wait

S. K. CHAKRAVARTI, LTD.
Water-Works, Drainage and Plumbing Engineers
Mission Row, Calcutta

Sound Plumbing means health and longevity

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—
10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.
Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

A. QASIM,
Acting Supdt., S. S. Hogg Market.

Chronicle & Comment

Planning the Future Britain

The recent creation of a new Ministry of Works and Buildings in Britain under the charge of Lord Reith has, we find, called forth a good deal of popular interest in the post war rebuilding of English cities. This has manifested itself in letters to the papers, in leading articles, and in the speeches of Ministers. Lord Reith has been asked to report to the Cabinet on the methods and machinery required for the construction of town and county. The attitude of the British public towards thinking and planning ahead is, we are told by F. J. Osborn writing in the *Quarterly Review of the Gardon Cities and Town and Town Planning Association*, altogether more favourable than it was at a similar phase of the last war. In 1915 any discussion of the problems of social rehabilitation, let alone social progress, in the unforeseeable future, would have been regarded in England as a diversion from the war effort. Not until the third or fourth year of the war was such discussion generally considered tolerable. Not until victory seemed in sight were the first official steps taken towards a policy of national reconstruction. The explanation of this change of national mood in Britain to-day is accounted for by the visible fact that many buildings are being destroyed and will have to be replaced, and the obvious thought that preparations must be made for linking up this replacement with the renewal of slum-clearance and housing campaign interrupted by the war. Added to this is a passionate desire to get some good of a great disaster. "People find that they can sustain their dangerous and arduous duties in the present all the more resolutely if they feel that thought is being given to the creation of a better world in the future."

The discussion of the question in the British Press, we note, has widened out to the whole subject of the distribution of industry and population within Great Britain. Cities, it is pointed out, have grown to or beyond the limits of convenience and it is felt that it is not necessary, in any scheme of post-war reconstruction, to extend them or allow other cities to reach their size. All towns and cities should, it is held, be progressively planned or re-planned "so that their industries can be carried

SMALL-POX: YOU NEED NOT GET IT AT ALL
GET YOURSELF VACCINATED

on efficiently, and so that they produce, not chaotic mobs of unrelated individuals, but genuine social comumnities." The war has exposed the weaknesses of a monster London covering 448,455 acres and containing a population of 8,655,000 persons. Any plan of reconstruction, it is urged, must provide for a more balanced dispersion of industry and population, and for a great development of the agricultural life of England.

Public opinion in Britain now, it is evident, realizes the need of planning on a comprehensive scale and is ready to support a bold and imaginative policy under new auspices, undoubtedly the two chief experiences of the present war have brought the subject to a head—these being the evacuation of children from the east end and "the terrible evidences of neglect and poverty that they took with them into the clearly and wholesome atmosphere of the country cottage," and the other the destruction by bombing of those vast aggregations of small dwellings in the east end. In the latter case there has been a half-expressed sigh of relief that the Germans are doing for the English the clearance that they dared not tackle themselves! A great replanning of those sordid areas of physical and spiritual depression is, therefore, demanded, with "a far wider clearance of the slums than the devilish bombers are able to accomplish": and it is hoped that "no temporary inconveniences and no vested interests are allowed to stand in the way of its execution when the time comes."

PARTIAL TEST BLACK-OUT

Screening Street Lights

A partial test black-out was held in Calcutta on Friday last. The area affected by this test was that portion of Circular Road which lies between Beadon Street and Shambazar Street, running to a mile. The test also affected the houses and shops on either side of the road. The street lights, numbering about a hundred, were screened during the 45-minute "black-out" from 8 to 8-45 p m. as also the house and shop lights

Mr. A. S. Hands, A.R.P Controller, Bengal, interviewed by the *Associated Press* said *inter alia* :—

"The lighting restriction test which was carried out in the stretch of Upper Circular Road between Beadon Street and Shambazar to-night was with the object of investigating the possibility of obscuring the lighting on the streets in such a manner as not to interfere with normal activities and at the same time to prevent Calcutta being seen by approaching aircraft if the occasion arises."

TUBE-WELLS FOR CALCUTTA

Financial Help from Central Government

An assurance of financial help is understood to have been received by the Government of Bengal from the Central Government in working out the former's scheme for sinking tube-wells in the city of Calcutta for ensuring requisite supply of drinking water to the citizens if the present sources are disturbed in case of an emergency.

The scheme, as it now stands, provides for 2,000 deep and 500 shallow tube-wells for sewered and unsewered areas, respectively.

With the idea of starting the work very soon—the estimated cost being about Rs. 25,00,000—the Bengal Government are now collecting the materials necessary for the purpose.

London School Children.

London's compulsory education system has practically broken down under the *Blitzkrieg*. Though the London County Council had sent school attendance officers after parents and children alike, the average daily school attendance had been in recent months only 26,000. Half of London's grade schools, we are told, have been "battered into rubble" or commandeered for other uses. Those still open carry on with fewer hours of schooling, in crowded class-rooms, their lessons punctuated by air-raid warnings.

Many parents keep their children away, some for safety's sake. The most common parental excuse for non-attendance is the need to secure shelter space. By 9 every morning, swarms of "ferret-eyed, wax-skinned youngsters" line up with piles of bedding outside the tube shelters, waiting to go underground to hold the family 'pitch' till night fall. Inside they play on the long platforms of the underground station, keep an eye open for the chance to "steal" a better sleeping space. Said one boy chided for keeping away from school: 'School?' I've got to get the seats, ain't I? Ma goes home to do her work and sends me back to keep her place. Sometimes the women try to rush you. But they can't put it across me. I've em beat.'

The efforts of the Government and the Press have failed to speed the evacuation of London's remaining children. The mass transplantation reached a peak in October last, when 10,000 women and children registered in a single day, but then it dwindled. In a final attempt, London's big dailies wrote long, persuasive feature stories. The Ministry of Health issued thousands of publicity leaflets explaining "Why You Should Let Your School Children Go." Its advertisements asked: "Mothers are your children still in the danger areas?" Six hundred door-to-door canvassers drank thousands of cups of tea in thousands of kitchens, patiently explaining the reasons for evacuation. All told, about 40,000 more children were sent away, but the rest would not go. The President of the Board of Education, Mr. Herwald Ramsbotham, who had formerly served in India, threw up "compulsory evacuation of school children is politicaly and socially impossible."

Lahore City Corporation

Lahore can now boast of a full-fledged city Corporation. Three weeks ago the Punjab Legislative Assembly passed the Lahore Corporation Bill. There were certain contentious clauses in the Bill which evoked a long and somewhat acrimonious discussion. It was hoped that a compromise will be arrived at between the Government and the Opposition. But this failed. The contentious clauses were passed without substantial changes: No amendment was accepted by the opposition.

The contentious clauses related to provisions for the nomination of 15 Councillors out of a total of 68, the practical irremovability and the powers of the Chief Executive Officer of the Corporation who will be appointed by the Government, and an obligation imposed on the Corporation to levy a house-tax. The last is a totally novel constitutional device; for whereas it is usual for constitution-making authorities to burden the governmental institutions, they

create with certain duties, which involve obligatory expenditure, their own discretion about the manner in which revenue is to be raised is left unfettered.

The Act is silent about the system of elections which will be adopted. Constituencies will be framed by the Government, and the people will have to watch and see that they do not turn out to be "rotten boroughs." A wholly indefensible provision in the Act is the power the Government has secured to declare the election of any member void without proving any charges against him before a regularly constituted tribunal. And one of the Sections seeks to exclude the jurisdiction of the courts from a judicial review of the acts of the Executive Officer and of the Corporation is so manifestly opposed to all canons of good government that it has only to be stated to be condemned.

JADABPUR T. B. HOSPITAL

New Ward Opened

The Lady Mary Herbert opened the Khagendranath and Pramila Sundari Mitra Ward at the Jadabpur Tuberculosis Hospital on Wednesday in the presence of a large and distinguished gathering.

The new Ward has been constructed out of the contributions of Mrs. S. N. Mallick, wife of the late Mr. S. N. Mallick, C.I.E., who was the first non-official Chairman of the Corporation of Calcutta, for some time a member of the Council of the Secretary of State for India. According to the wishes of the donor, the Ward has been named the Khagendranath and Promila Sundafi Mitra Ward to perpetuate the memory of her deceased parents.

In asking the Lady Mary Herbert to open the Ward Dr. B C. Roy said in the course of his speech :-

"We are also glad to announce that the institution has received a gift of about 40 bighas of land at Fuleswar, on the river Hooghly, from Seth Jamunalal Bajaj of the Working Committee of the Indian National Congress The object of this gift is to enable the Society to form a nucleus for establishment of an aftercare colony for the patients who may be discharged as convalescents from this institution as well as from our Sanatorium at Kurseong. A scheme has been prepared and it is likely to involve an initial expenditure of about rupees two lakhs. We appeal to all to contribute their mite to bring the scheme into fruition

We take this opportunity of offering our deep sense of gratitude to the donor for her munificent gift for which she will earn the eternal blessings of those who will find shelter and treatment in the beds provided by her. We fervently hope that her noble example will be emulated by others."

The Lady Mary Herbert then performed the opening of the Ward and declared it open.

Progressive Cawnpore

We referred to the progressive character of the Cawnpore Municipal Board in a recent issue.

In the sphere of educational activities, the Board have not lagged behind any other municipality in the province and much progress have been made in this direction during the last decade. They were the first in the province to enforce compulsory and free primary education among the boys and girls of the city and they have now decided to enforce it among boys throughout the city. The city has 7 Arts and Science Colleges and one each for Commerce, Technology and Agriculture, besides about a dozen High Schools. The Board's expenditure on education amounted to Rs. 5,16,000 in the last financial year.

In respect of Medical Aid, the Cawnpore Municipal Board maintain 12 dispensaries of various denominations as well as those for Maternity and Child Welfare work. The Board also give grant-in-aid to about 40 other dispensaries of the city. They have also decided to build and maintain a sanatorium for patients suffering from tuberculosis and they hope to take up the work as soon as the land selected for it is acquired. They have already opened a clinic for patients suffering from tuberculosis.

The Board also provided a good system of lighting, roads, drainage and water supply. They are engaged at present in carrying out an extension scheme of the water works which when completed will ensure a continuous supply of water for 24 hours and to the highest building in the city. The scheme is likely to be completed within about six months.

VICTORIA MEMORIAL TREASURES

Underground Vault to be Utilised to Ensure Safety

The underground vault in the Victoria Memorial Hall will be utilized to ensure the safety of the valuable documents and relics stored in the Hall against a possible air raid

The vault which is approximately 1600 sq. yds. in area will, according to experts, provide space barely sufficient to accommodate the valuable treasures displayed in the Hall. But one formidable difficulty with which the authorities concerned seem to be confronted is that the underground vault does not appear to be damp proof enough to justify its utilisation immediately. Necessary steps are, however, in contemplation to make it suitable for this purpose in consultation with a well-known firm of Engineers and contractors of this city

SIR S. RADHAKRISHNAN

Leaves Calcutta University

Sir Sarvapalli Radhakrishnan, King George V Professor of Mental and Moral Science of the University of Calcutta has resigned his post from July 1, 1941, when he would join the Benares Hindu University as the Sir Sayaji Rao, Professor of Indian Culture and Civilisation.

Sir Sarvapalli has resigned his professorship of the University of Calcutta in order to be able to devote more time and attention to the Benares Hindu University of which he is at present the Vice-Chancellor acting in accordance with the wishes of Pandit Madan Mohan Malaviya and the Baroda Durbar This new appointment will not in any way, it is reported, interfere with his engagements at Oxford University and his duties as the Honorary Vice-Chancellor of the Benares Hindu University.

The Syndicate of Calcutta University which considered Sir Sarvapalli's resignation, on Friday and accepted it with regrets, expressed its appreciation of the scholarly contributions made by him to the University of Calcutta and has, it is understood, decided that he be appointed Professor Emeritus in Philosophy of the University.

THE WEEK IN THE CORPORATION

A SHORT RECORD OF THE MORE IMPORTANT DECISIONS OF AND DISCUSSIONS AT THE CORPORATION MEETINGS FOR THE WEEK ENDING MARCH 28, 1941

[The reports of the meetings of the Corporation appearing below are, in most cases, a summary of the proceedings.—Ed., "C. M. G."]

THIRTY-SEVENTH ORDINARY MEETING OF THE CORPORATION OF CALCUTTA, HELD ON THE 28TH MARCH, 1941

Grants to Hospitals

The meeting sanctioned the recurring grants for the year 1940-41 to the different hospitals, dispensaries, almshouses and charitable institutions in the city and the suburbs. The grants would be calculated on the basis of the amount of grant to each of the institutions sanctioned last year (1939-40).

The majority House voted nearly Rs. 6,00,000 as such grants, thus restoring the 25 per cent. cut imposed last October. The Public Health Committee had recommended Rs. 4,56,039.

The Mayor (Mr. A. R. Siddiqi) warned the House that its decision would have the effect of torpedoing the budget.

Discussion centred round the Committee's resolution that in modification of all previous resolutions of the Corporation on the matter recurring grants aggregating Rs. 4,56,039 (calculated on the basis of the amount of grant to each of the institutions sanctioned for last year, less 25 per cent. in each case), be sanctioned for 1940-41 subject to certain conditions.

Mr. N. C. Chatterjee moved as an amendment that in modification of all previous resolutions of the Corporation on the matter, recurring grants sanctioned for last year be sanctioned for 1940-41.

Mr. W. A. Burns invited the attention of the House to a little problem in arithmetic. If they were giving Rs. 300 to an institution and cut it by 25 per cent. the institution would receive Rs. 225. But if they increased the grant to Rs. 400 and imposed a cut of 25 per cent. they would be giving Rs. 300. All those increases, he remarked, were an indirect way of getting round the cut decided on in October last.

Deputy Mayor, Mr. Phanindra Nath Brahma pointed out that only the other day they with very great difficulty passed the Budget for the year 1941-42 with a borrowing capacity of only 87½ lakhs of rupees. If they now increased the grants they could not balance the Budget and their borrowing capacity would also be reduced. He would, therefore implore the House not to make any fresh pledges which they could not fulfil.

The Mayor said that if the House wanted to give the full amount without the cut, it might do so but it would unbalance the budget. Also, if the House wished to go back on its decision of October 2, 1940, it could do so.

Mr. Chatterjee's amendment was carried on a poll by 46 votes to 22, one remaining neutral.

The Mayor said that he could not congratulate the House on its going back upon their previous decision for imposing a cut in the grants.

Mr. N. C. Chatterjee pointed out that they had got one lakh more this year by realisation of municipal rates than they had expected.

The Mayor: If you have more money our borrowing capacity will increase. But we cannot torpedo our Budget in this way.

Mr. M. A. H. Ispahani, Leader of the Muslim League Group, said that their borrowing capacity would be reduced by 20 lakhs by the decision they had taken.

The question of grants to the following institutions for the year 1940-41 would come up for consideration at the next meeting of the Corporation:—Maharaja Cossimbazar Govinda Sundari Ayurvedic College and Hospital, Charmichael Medical College Hospital, Marwari Sanatorium, Tuberculosis and Cancer General Charitable Outdoor Hospital.

The following resolutions were adopted by the House in this connection:—

(1) That in view of the financial stringency of the Corporation as expressed in the resolution of the Corporation dated the 2nd October, 1940, no increase of the amounts of grants to those Institutions, which have been receiving grants hitherto, be sanctioned this year.

(2) That no capital grant be sanctioned to any Institution this year.

(3) That the Committee in making their recommendations abide by the resolution of the Corporation dated the 2nd October, 1940, directing a reduction of 25 per cent. in the amounts of grants as sanctioned last year; and leave the final decision on the point in the hands of the Corporation.

(4) That in view of the fact that no savings could be effected this year, through reduction in the amount of grant to any of the Institutions already receiving Corporation grant, apart from the reduction by 25 per cent. no new application for grant be entertained this year.

(5) That in modification of all previous resolutions of the Corporation bearing on the matter, the same recurring grant to each of the Institutions mentioned in the statement (with the exception of (a) to (d) the question of whose grant is still under the consideration of the Health Committee be sanctioned for the year

1940-41, subject to the conditions mentioned in column 9 of the List of Applications for grants for 1940-41, and also subject to further conditions mentioned in column 6 of the statement of grants.

(6) That the amount necessary to cover the excess over the budget provision for grants to Hospitals, Dispensaries etc., be appropriated from the Closing Balance under Section 95 of the Act.

Grants to Almshouses

The House next sanctioned Rs. 1,24,160 as grants to almshouses and charitable institutions with and without educational branches, for 1940-41.

In the case of grants also the Corporation decided not to impose a cut. No capital grant in respect to these institutions was sanctioned this year, nor any new application entertained.

Appropriation from the Closing Balance

Pursuant to a recommendation of the Finance Standing Committee, the meeting sanctioned (under Section 95 of the Act) the appropriation of Rs. 1,41,870 from the Closing Balance to different Budget items in order to meet the last year's unpaid grants to institutions (hospitals, almhouses, schools and libraries, etc.?

New Appointment

The recommendation of the Services Standing Committee appointing Dr. Abdul Mohid, Slaughter House Inspector, District II, as Sanitary Officer District II on Rs. 200 per month in the grade of Rs. 200—10—350 was confirmed.

Swinhoe Street

The administrative sanction accorded by the Works Standing Committee to the Engineer's revised estimate amounting to Rs. 54,000 for sewering Swinhoe Street was confirmed.

Councillor Cross Resigns

The House accepted with regret the resignation tendered by Mr. F. C. Cross of his seat as a Councillor of the Corporation on grounds of continued ill health.

The Late Mr. K. N. Sen

Earlier in the proceedings the Corporation adopted a resolution of condolence on the death of Mr. Khagendra Nath Sen, a well-known citizen of Calcutta.

Acharya Ray Jayanti

Exhibition At Corporation Commercial Museum

THE Chemical and Pharmaceutical Exhibition organised by the Commercial Museum of the Calcutta Corporation in celebration of the Jayanti (80th Birthday Celebration) of Sir Prafulla Chandra Ray was opened on Friday by Sir Nripendra Nath Sircar in the presence of a large and distiguished gathering at the premises of the Corporation Commercial Museum

Sir N. N. Sircar drew on this occasion the attention of the people to the appeal for funds issued some time back over the signatures of many prominent men for creating an endowment for scientific research—an object dearest to the heart of Acharya P. C. Ray.

The site of the exhibition covers an area of 8,000 square feet and stretches of rows have been erected where exhibits are kept in separate stalls. A large number of charts showing the comparative study of the different organic and inorganic chemicals and pharmaceuticals with datas of exports and imports from and into India have been placed round the Exhibition pandal. Besides a large number of chemical and pharmaceutical factories and laboratories both local and from outside, who have got their stalls, the participants in the Exhibition include the Imperial Institute of Sugar Technology, Cawnpore, U. P. Government Arts and Crafts Emporium, Government of Bengal Cinchona Cultivation, Mungpoo; Punjab Government Laboratory; Marketing Officer, North West Frontier Provinces; Madras Presidency College; Mysore Serum Institute; Indian Institute of Science, Bangalore; Forest Research Institute, Dehra Dun; Lac Research Institute, Ranchi, Calcutta University College of Science—Applied Chemistry and Botany Departments; Benares Hindu University; Calcutta School of Tropical Medicine, Pharmacological Department, Geological Survey of India, Government Test House, Alipore, Indian Museum—Industrial and Botany Departments and Botanical Garden, Sibpore.

Messages of good wishes which were read at the meeting were sent by Dr. Rabindranath Tagore, Pandit Jawaharlal Nehru, Dr. Rajendra Prasad, Sir Tej Bahadur Sapru, Sir Adeshir Dalal and Rao Bahadur Viswanath.

MR. J. C. MUKERJEA

In inviting Sir Nripendra Nath Sircar to open the function, Mr. J. C. Mukerjea, Chief Executive Officer, Calcutta Corporation said that this function had been organised to do honour to their grand old man of science who was entering into the 80th year of his life. When they talked of him their hearts naturally bowed down to him in reverence and affection. What had he not done for India in the realm of science? He had attempted to establish a position for India and Indians as scientific people. He had organised a band of scientists who had become well-known throughout the world.

Sir N. N. Sircar

In declaring the exhibition open Sir N. N. Sircar said that he considered it an honour to open the exhibition. When he came to think of having first come into contact with Acharya P. C. Ray, he remembered the days over half a century back when in the Presidency College he had the benefit of attending Acharya P. C. Ray's classes and lectures.

Sir Nripendra said he did not want to waste time by personal reminiscences, but he would like to recall a small incident to show the simplicity of Sir P. C. Ray. It was, he believed, in the 1896 when after having passed out of the University he was working for some months in helping Sir P. C. Ray in some of his experiments. On one occasion while in work of experiment flames burnt out a hole in the coat of Sir P. C. Ray which was hanging nearby. It did not matter to him very much, because the coat had already three holes and the addition of four did not really make very much difference instead of possibly increasing a little unnecessary ventilation.

When they talked or thought of Sir P. C. Ray they should remember the point that Sir P. C. Ray had realised the extreme urgency, necessity and importance of organising science and industry in the country long before others had done. He realised that unless they developed them, their country could not prosper in modern times. They could have no place in the comity of nations if they had still to depend on agriculture. They must have seen from the census returns how the population had increased, which was something about 400 millions. The pressure on the land was increasing in geometrical progression. It was obvious, therefore, that if they had to live and live fairly well and to hold their own with other nations there was no way out except to re-organise and develop science and industry in this country. If to-day they were absolutely sure of it, it must not be forgotten that none had contributed more to this appreciation than Sir P. C. Ray. His contributions did not consist in merely making speeches or offering advice but in practice hard work by devoting his life to a cause of which he was passionately fond.

In this connection Sir Nripendra referred to the appeal which was issued by many eminent persons from all parts of India as well as Indian States. It was an appeal for funds to create a fairly large endowment for scientific research. He thought the signatories were right in taking this to be an object which was dearest to the heart of Sir P. C. Ray.

Mr. G. L. Mehta proposing a vote of thanks to the chair, said that he would like to associate all Indian commercial bodies in putting their humble tribute to Sir P. C. Ray on this occasion. He said that even by a brief contact with Sir P. C. Ray they would derive inspiration from him.

Among those present were Hon'ble Mr. Justice C. C. Biswas, Dr. Meghnad Saha, Col. A. C. Chatterjee, Dr. A. C. Ukil, Mr. G. L. Mehta, Dr. Panchanan Neogy, Mr. Makhan Lal Sen, Dr. J. C. Chatterjee and Dr. H. N. Ray.

The Exhibition will remain open from 4-30 to 8-30 p.m. Admission is free. At 7-30 p.m. an educative Industrial film will be shown.

RABINDRANATH'S 80TH BIRTHDAY

Calcutta University to Celebrate

The University of Calcutta has it is learnt, decided to celebrate the 80th birthday of Dr. Rabindranath Tagore early next month.

This is believed to be the first occasion when the 'University' will be celebrating the birthday of a savant under its auspices.

BENGAL GOVERNMENT'S SUMMER EXODUS

The usual summer exodus of the Government of Bengal to Darjeeling will be considerably curtailed this year and the Departments concerned with Law and Order will remain in Calcutta in order that any possible development arising out of the international situation may be dealt with promptly and effectively.

Announcing this decision of the Government, a Press *communique*, states: "It is of the first importance that the Government should maintain the closest contact with business interests, the railways, public utility companies, the Calcutta Corporation and other authorities.

"The usual camp offices of the remaining Departments will, however, open in Darjeeling, as in other years, after the Easter Holidays."

CHOLERA IN CALCUTTA

Attacks And Deaths: Ward By Ward

Below is given the number of attacks and deaths from Cholera in Calcutta during the week ending March, 22nd 1941:—

Local Bodies And Public Utility Services

[By Jayraman]

(Concluded from the issue of 8th March, 1941)

III

NOW as to the Transport Services. During the first quarter of the present century, serious efforts were made by several District Boards in the Madras Presidency to construct railways as an advantageous alternative to roads. The Madras Government favoured the idea: they thought that it would go far "to solve the problem of how the advantages of the great railway systems of India are to be brought within reach of people who are now isolated therefrom", and that, in the near future, there would be "a net-work of local lines connecting at least every *taluk* with the great centres of trade and population." In the amendment of the Madras Local Boards Act 1900, the Boards were empowered to levy a special railway cess of three pies in the rupee for the construction of railways and tramways.

At present the only tramway service in the Presidency is provided in the Madras City by the Madras Electric Tramways Ltd., with an invested capital of £30,000 and a route mileage of 16 miles, 1 furlong and 31 yards in 1938-39. The tramways are used by large number of people, but are quite inadequate to meet the needs of a city which has spread far beyond the range of the present tramway system. The tendency of the rapid development of "Greater Madras" in recent years on the southern side of the city is accelerated by the new provision of cheap and speedy transport afforded by the electrification of the South Indian Railway for a distance of 18 miles outside Madras City. The bus-services help to serve the needs of cheap passenger transport within the city which the tramways could not meet, but the services are privately owned and, combined lack of capital and keen competition result in a marked lack of efficient organization.

Several Boards had eagerly taken advantage of this provision and had accumulated large funds for railway development. 275 miles of railway were opened at a cost of 110 lakhs of rupees and by the year 1920, there were schemes for the further construction of more than 900 miles, the accumulated cess amounting to about Rs. 150 lakhs.

But owing to a conflict of interests between the District Boards and the main line Companies which had to operate the lines on behalf of the former, and to differences of opinion between the Provincial Government and the Government of India in the selection of lines, progress grew slow and stopped. By 1912, only two Boards—Kistna and Tanjore—possessed open railways though as many as eleven District Boards levied the cess. With the commencement of the Great War of 1914-18, all new railway schemes were suspended and members of the Legislature proposed that the cess amount collected by the Boards might be pooled and more urgent and remunerative lines completed. After the War, the Government of India announced a new policy and the local railways raised objection to new lines and claimed compensation for loss due to the "short circuiting" of their lines. These experiences of twenty years together with many administrative difficulties resulted in a reaction against the development of railways by the local Boards and showed that motor transport is cheaper and more lucrative than railways for short-distance traffic: and the clause relating to the railway cess was removed in the Madras Local Boards Act of 1920. The accumulated funds have now almost disappeared and have been utilised in building roads and bridges, though even now a few Boards own and maintain some lines.

> The District Boards of Guntur, Coimbatore and Tinnevelly in the Madras Presidency at present possess open railway lines. In 1938-39, the railway line possessed by the Guntur Board (21 miles) earned a net profit of Rs. 0·86 lakh or 5·3 per cent. on the capital outlay. The line owned by the Coimbatore Board (25 miles) yielded a net return of Rs. 0·56 lakh (or 4·41 per cent. on the capital outlay) and the line belonging to the Tinnevelly Board fetched a net return of Rs. 1·37 lakhs (or 5·04 per cent.).

Recently a move has been initiated by many District Boards in the Madras Presidency that they should have the right to run passenger services on the District Roads. There has been a universal complaint that private bus services render irreparable damage to roads, that they are carried on irregularly and unsystematically, resulting in public inconvenience and discomfort, that profits derived from the use of roads should not be appropriated by private individuals and that the only remedy is the starting of motor services by the local bodies themselves. In the Coimbatore District, the Government recently allowed the District Board the monopoly (which has now been withdrawn) to run bus services between Coimbatore and Pollachi. The Railway running between these two places is owned by the District Board. The District Board expected to make a net profit of Rs. 20,000 on this route of 24 miles. The yield is certainly encouraging. But there are one or two disquieting factors.

The Coimbatore District Board recognised that if it owned its own fleet of buses it would not be possible to run the service at a profit. It therefore hired a fleet of cars complete with drivers at four annas a mile. The arrangement recognizes the virtues of a commercial company. The District Board recognised that departmental management would be uneconomic. In each district, it should be noted, there are profitable and unprofitable lines and it would be rash to come to conclusions from a single profitable line. The Coimbatore District

Board claims that if it is given the monopoly on all the routes in the District, it will make a net profit of Rs. 1 lakh by letting out the service on contract. But there are obvious flaws in such a proposition.

In the first place, the profit earned would be at the expense of the contractor who would in turn pass on the loss to the travelling public in the shape of the enhanced fares; secondly, the contractor may not employ sanitary and comfortable buses, and thirdly, he may pay starvation wages to his staff. In assessing the financial results of such a scheme, it would be necessary to work out, first of all, the profits and losses on the different routes to arrive at the gross profit; then to fix economic fares in consultation with railways where the services are running parallel, finally to prescribe minimum comforts and conveniences and wages for the employees. It should not be forgotten that the underlying idea of public ownership of public utility concerns is not profit but efficiency of the services, more comforts, and ultimately less charges.

The scheme which looks ideal from several points of view is the constitution of a Provincial Board of Transport on the lines of the London Transport Board. In 1933, the London Passenger Transport Board was constituted to take over the various transport undertakings and interests other than main railway lines in a defined area. The duty of the Board was 'to secure the provision of an adequately and properly co-ordinated system of passenger transport, while avoiding the provision of unnecessary and wasteful competitive services.' The Government of India, through the Railway Board, may well venture on such a scheme; even a partial emulation of the methods of the London Passenger Transport will provide the Province, not only with an efficient and well-organised transport service but also give adequate financial relief to the local authorities, especially District Boards, which are hard pressed for funds for the maintenance of roads since the abolition in 1931, of their fruitful and increasing revenue from tolls. The Transport Board may be constituted with capital subscribed by Government, the Railways and the Local Bodies, and a return of 4 to 5 per cent. may be guaranteed. The net earnings after the payment of this dividend should be distributed on the basis of the mileage in each District. Such a venture, if wisely administered, would give Rs. 50 lakhs to the districts in a few years time. Government finances may also be relieved of the present road subsidies.

IV

IN fact, the solution, from an economic and administrative point of view, lies on the formation of a series of Public Corporations or Boards, on a Provincial basis, to direct and manage Public Utility Services as in England, South Africa and many other countries. The method of managing Public Utilities by a Central Board, being ultimately responsible to the people but freed from interference in the day to day administration of business, has now become a widely accepted principle of modern Public Administration. After 1920 there has been a definite tendency in Western countries, especially in England, to adopt the principle of Public Utility management by Public Corporations in many spheres, in Electricity, Broadcasting, Transport, etc. In London, for example, the County Council suffers from all the disabilities attached to local bodies in the management of Public Utility Concerns. But, though the Public Utility Services are not owned by the London County Council, separate authorities (on which the County Council is represented) control these services. The Metropolitan Water Board, the London Passenger Transport Board, the Port of London Authority, etc., are the *ad hoc* bodies with which London is familiar. The experience of England and other Western countries strengthens the case for Corporation or Boards on similar lines here also, as conditions in our Country demand such an organization and as we are also in a limited way familiar with such bodies, *e.g.*, the Railway Board, Port Trusts, etc.

The most serious drawback of such an *ad hoc* body, according to Dr. Robson, is that 'there is no method of co-ordinating its work with related activities carried out by other bodies.' 'The services of a great modern city,' reminds the author, 'are becoming more inter-related every day and even their efficiency is determined to no small extent by the degree of co-ordination that is attained.' Strong as the objection is, the fact that Parliament in England has in recent years reverted to *ad hoc* bodies is a testimony to their proved efficiency, and in so far as these bodies must be confined only to the Public Utilities and must work only within the powers allotted to them, their constitution and powers might always be changed and controlled so as to serve best the interests of co-ordination. Moreover, larger regions would be more economic than smaller, and hence it is that we feel that the Public Corporations to manage Public Utilities should be constituted in our country on a provincial scale, equipped with appropriate power to promote the regional outlook upon other services which would be provided more efficiently and cheaply by large scale provisioning and arrangements different in type from those which now exist. This will avoid over-lapping and make co-ordination possible.

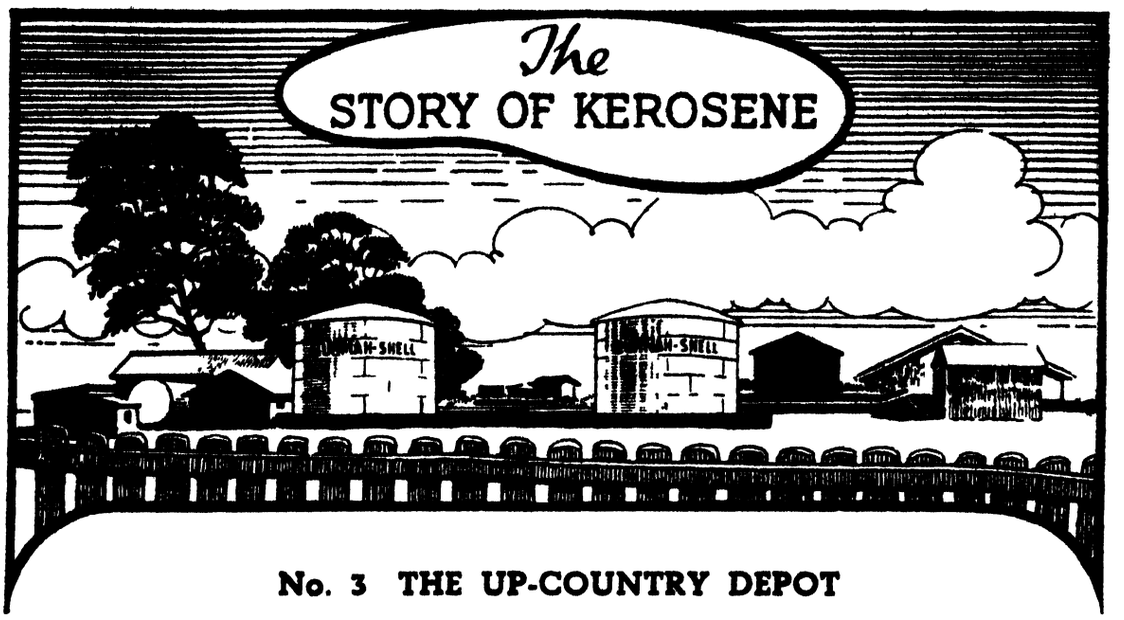
The foreign experts who came to assist the Indian Central Banking Committee, however, took a different view and were of the opinion that only an All-India Corporation must be considered. But, for the following reasons, Provincial Institutions are more suitable: (1) Medium-sized industries and Public Utilities suffer from inadequate finance more than the bigger organised industries, and a central institution is hardly fitted to undertake the financing of such types. (2) Local Utility Concerns may be able to draw capital more easily from local areas if there be an institution in a Province for rendering financial help to industry. (3) Under the present constitution, industry is a 'Provincial Subject' (as opposed to the Federal Sphere) and any financial assistance to public industrial institutions depends on the Provincial Governments. These important practical considerations leave almost no choice in the matter. But if Provincial Banks are to be started, the dangers of their being allowed to finance all kinds of industry, instead of confining only to Public Utilities, are very great.

Hence the only way out is the establishment of Provincial Industrial Corporations. However, instead of an All-India Industrial Corporation, there is a case for a Central Association, in which the various Provincial Corporations may combine to discuss matters of common policy, inter-provincial co-ordination, co-operation of power schemes, road-rail co-ordination, etc.

But the primary condition of success is the character of the administration and the chief executive staff. The Board or Corporation should consist of competent men whose only title to appointment should be their business ability and experience. Government must possess the power of appointing one or two directors to ensure that nothing is done that will lead the Corporation into disaster. But it is not necessary to grant the Government directors any veto; it is unlikely that the other directors will refuse to follow the advice given by the official directors if it is sound. Government may, however, have the support of the Board by taking up a certain portion of its share capital. A further measure of State assistance by guaranteeing the debentures of the Board for a period of five or ten years will also be justified. As the financing of public utility services is the most important task of the Board, deposits, if received from the public, should be for long periods, say, two years or longer. A State-aided institution along these lines is the one and only solution for the problems confronting Public Utilities. Local authority management or even Government departmental management, not to speak of private ownership, is neither an economic nor a desirable position.

While this prespective remains fundamental, it should, however, be applied with sufficient flexibility to meet the practical financial conditions of local authorities. Throughout the country there have been extraordinary financial needs due to the depression and, lately, due to the war, and they will continue indefinitely for the future. The lack of funds has been the main problem of local bodies, while the demands on their various services have been increasing. Consequently, the prospect of profits from public utility concerns like Electricity and Transport Services (*e.g.* Bus Services) is alluring; and since even when the constitution of a Provincial Public Corporation materialises, subordinate authorities would be required to manage the utility concerns in the districts, although they may be under the supervision and control of the Board, well-managed local authorities might well initiate public ownership on the basis of immediate profits subsequently developing a long range programme of gradual rate reductions and stimulation of consumption. They could thus preserve substantial net earnings for general municipal purposes, and at the same time, enable the community to realise the economic and social advancements which were dependent on low rates. For example, local authorities, which have been depending extensively on profits from their electrical undertakings, cannot make an immediate shift to sharp rate reductions. They should adopt a somewhat long-range programme of gradual rate reduction and positive stimulation of consumption. During a period of five years, they can bring rates down and push consumption to much higher level without sacrifice of net earnings. This course applies only to those local bodies which are already owning and managing electric and other utility concerns. Even in the case of larger municipalities, the right to purchase the concerns at the end of a stipulated period may be reserved to themselves whenever they enter into contract with private interests for the supply of utility services. But it should be remembered that while the Public Utility Service should contribute to the general municipal support along with other business, it should not be used as special medium of tax collection. Its public justification depends fundamentally upon its promotion of community advancement, rather than as a means of taxation. This applies to private as well as public systems. Every contract in respect of utilities to be entered into by local bodies should, therefore, be subject to the approval of the Government.

V



A DISTINCTION has to be drawn between public Utilities properly so-called, such as Electricity and Transport Services, and the so-called Remunerative Enterprises, such as markets, land-development, cart and bus stands, etc. The services of the former category have pronounced national aspects and should therefore be administered on a national (Provincial) scale by public institutions competent to manage them. The enterprises of the latter category are purely local in character; each of them has specific local benefits, and costs are very much affected by local needs and local conditions. Moreover the administration of such services does not involve much of technical skill or of great financial out-lay, as in the matter of the Public Utility Services proper. Thus the municipalization of such enterprises as cart and bus-stands, land-development, tree-planting, is not merely desirable but necessary, because if left to private enterprise, they are likely to harm citizens.

It should be remembered that these are perhaps the most satisfactory sources of local revenue. The payments are not taxes but definite payments for value received. A man who wants a stall in a market has no objection whatever to pay a reasonable price for it: he would much sooner do so than not have the facilities for selling his goods. These payments, therefore, avoid the most objectionable feature of all taxation, *viz.*, the unwillingness to pay. A real effort to develop these resources by local authorities will not only be in their financial interests but also provide increased amenities to the public.

But such activities have not received as yet the attention they deserve.

> In 1938-39, the total net revenue from remunerative enterprises for all the 82 Municipalities in the Madras Presidency amounted only to Rs. 18·46 lakhs and for District Boards only Rs. 14·95 lakhs.

No. 3 THE UP-COUNTRY DEPOT

The problem of ensuring a regular supply of Kerosene throughout India is very considerable. Of major importance in the smooth-running organization is the up-country Depot. Each of these Depots stores sufficient quantities of Kerosene to meet any possible demand from the area it serves.

It is due to the large number of Depots situated at selected points that Burmah-Shell is able to supply Kerosene to the people of India with machine-like regularity.

Burmah-Shell has sunk vast capital in this important link in the chain of distribution which starts at the Company's Seaport Installations and ends in 600,000 villages.

Viruses Affect Men And Animals Alike

By
DR. MORRIS FISHBEIN
EDITOR
"Journal Of The American Medical Association"
AND OF
"Hygiea": The Health Magazine

THE term "virus" is an old Latin word meaning poison. Poisons were known to the ancients, who described the poison that is found in the pustules of Small-pox and who related that the virus of a snake was responsible for the death of Cleopatra.

For centuries it has been known that some diseases were caused by viruses, which were different from bacteria. Small-pox, for instance, existed in China as early as 1700 B.C., and was responsible for great epidemics after 1,000 A.D. The virus disease called yellow fever has been known since early in the seventeenth century. Now it is generally believed that influenza, which has existed for many centuries, is also caused by a virus.

Incidentally, viruses not only affect men but animals and birds, as in the case of foot and mouth disease, parrot fever and different conditions called pox. Plants, too, may be affected by viruses; in fact, the loss to the potato industry from virus disease is said to be as much as ten million dollars. Viruses also affect sugar, beats, sugar cane and cotton.

With the development of new types of mechanical apparatus it has become possible to measure viruses by means of X-ray photographs and to detect their presense by magnetic lenses. Thus we have found that some viruses are destroyed by alchohol, while others are resistant. There is one plant virus that can be kept in alcohol for six months and still retain the power to infect. Some viruses die when they are dried but the virus of tobacco mosaic will remain infective for years on dried leaf tissue. Irradiation with ultra-violet light will destroy bacteria and some viruses, but the viruses can stand far greater exposure to ultra-violet rays than can the bacteria.

The scientists have also studied the viruses from the chemical point of view. When the viruses are taken out of body away from their host, they appear to be protein substances. They have, however, the power to grow and reproduce themselves.

The philosophers argue much as to whether or not the viruses live or are non-living. Indeed modern experts are inclined to the view that they fall in the transition stage between the living and non-living, possessing characteristics of both types of material.

LATEST IN MEDICINE

PEOPLE who make museums of their stomachs are no longer extraordinary in medical science. Enough cases have now occured so that it has come to be merely a question of determining how many unusual items the swallower of strange materials can collect before he has to have an operation for their removal.

In a case just reported by Dr. P. H. Wheeler of Vermont, a 43-years old railroad telegrapher, who had been committed to an institution for mentally defective persons, was found to have swallowed 1900 different foreign bodies, which collected in his stomach and which weighed more than 2¼ pounds when they were removed.

The material included 440 pieces of glass and 277 metallic bodies, comprised of wires, pins, needles, open safety pins, nails, a bottle cap, some pieces of barbed wire fence and a few razor blades Altogether he had to have three different operations on his stomach because of his collection.

On a previous occasion there had been removed 69 narrow staples, 24 wide staples, 21 pieces of glass, one pencil lead and a collection of 72 open safety pins, hairpins, needles, pins, tacks, pieces of safety razor blade, a piece of a hacksaw blade and screw. Sometimes normal people get the habit of

SMALL-POX IN CALCUTTA:
HAVE YOU TAKEN THE "SAFETY" MARK?

swallowing unusual items, most frequently swallowing pieces of hair with the eventual development of a hair ball in the stomach. This is called a bezoar.

* * * *

EVERY year 5,000 people in the United States die from the effects of severe burns. Most authorities are now agreed that many of these deaths could be avoided by adequate replacement of the fluid material of the blood which is lost when there are extensive burns of the surface of the body. A recent review suggests that rapid action is necessary if life is to be saved.

The fluid material from the blood which is lost must be replaced by a transfusion of bolod plasma. This helps to maintain the circulation and to relieve the concentration of the blood. It is also desirable to give such people a high protein diet. In some instances it becomes desirable to inject amino acids, which are the essential protein substances, directly into the blood. Skin gratifying is frequently required to replace the tissue that has been destroyed.

* * * *

THE old argument as to whether or not the skin and hair grow after death is answered by the American Medical Association. The death of the body as an organism occurs when the heart, lungs and brain quit working. However, individual cells may apparently live for some time afterward. As a matter of fact, skin and bone from the bodies of people who have recently died have been successfully transplanted to living persons.

It is a popular superstition that the hair and nails continue to grow after death. Medicolegal authorities differ in the acceptance of this evidence. One man reported in 1862, that he was present at the exhumation of a body which had been buried for four years. He said that hair protruded through the openings in the casket and that the deceased, who had repeatedly been shaved before burial, had hair on the head measuring 18 inches, beard 8 inches and hair on the breast from 4 to 6 inches long. Modern scientific authorities are doubtful of the veracity of this story.

Modern opinion is convinced that the growth of hair and nails in a dead human body does not occur to any measurable degree after death of the body as a whole. Apparently the skin and soft tissues may shrink so as to lead to slight extrusion of hair above the surface of the skin, giving the appearance of growth after death. The shrinking of the skin and soft tissues may cause the fingernails to appear longer and cause the face to seem to have hair, even though it was shaved immediately after death.

* * * *

ANALYZING the incidence of Appendicitis and death from this condition, Dr. L. Rumbold of Rochester, New York, says that the campaign to prevent people with a sudden pain in the lower right side of the abdomen from taking cathartics has hardly been successful because the incidence of a history of this kind in cases which have been operated on in the last few years is just as great as the incidence in cases seen between 1925 and 1930.

The chief factors in saving the lives of patients have been better post-operative care, and, he believes, improved surgery, including immediate closing of the wound except when there is an abscess. Thus any improvement in the mortality rate from appendicitis is due to general improvement in surgical care rather than to any new knowledge which has recently been developed concerning this subject.

—Local Bodies And Public Utility Services

(*Continued from page* 673)

Conservation of municipal lands, public roads and road margins so as to make them yield income has also not received the attention they deserve. Tree planting affords another source. But, notwithstanding periodical circulars from Government, arboriculture has remained a negligible service. Even village *panchayats* may do much to preserve in tact all "Communal" areas against appropriation by rich and influential persons. Bigger municipalities would serve public health, if they organized well-run dairy farms on the out-skirts of the city to supply bottled milk under hygienic conditions.

The question of municipal trading should be examined by experts with a view to its extension. A sound capital programme is a conditional precedent for the success of such schemes. But we observe invariably the total absence of this business ability in local authorities. Hence the need for separate public bodies like Public Corporations.

To conclude: while I feel that local authority management of important Public Utility Services such as Electricity and Transport Services is not desirable, and could be conveniently entrusted to separate semi-autonomous Public Corporations backed by the State, we feel equally strongly that local authorities should augment their income by embarking upon the smaller remunerative enterprises such as markets, land development, etc. The *ad hoc* Public Corporations should be confined to Public Utilities proper; there is a danger in the undue multiplication of such bodies and the existing services attended by the local bodies like education, health, sanitation, etc., should neither be provincialised nor entrusted to separate *ad hoc* authorities, as it would mean cutting at the very root of Local Self-Government. What is required is a wiser control and guidance from the Government. Local bodies should try and be vested with full powers, to prevent over-lapping, and various other extravagances and to reduce local scarcity. The basic idea should be to administer the services with a primary regard for the interest and welfare of the nation as a whole, thereby displacing the narrower and idiosyncratic outlook of many separate local administrations.—

Air-Raid Shelters

LONG before the war began much thought was given by engineers to the type of protection from air raids in the shape of shelters best suited to the possible actual needs in war. Out of this, considerable controversy arose, and it cannot be said that the issue is satisfactorily settled yet. Let us realise at once that what engineers may evolve and be capable of providing, there is always policy to be considered apart from mere technique of construction, and policy in such matters is the prerogative of Government. Engineers may give the authorities the best possible advice, but the last word rests with those who have to take various other factors into consideration, including the question of costs, since there are few willing to spend their own money on shelters without compulsion. Most people have no reserves to allow of any such undertaking out of their own resources. This does not apply to industrial establishments, on which the obligation falls to provide adequate protection for the personnel engaged in them. But there is always the duty of Government to protect the civil population, and in carrying out this onerous task the authorities do not always see eye to eye with their technical advisers. It is not our purpose to go into the reasons why this should be so: rather are we concerned in this article with the lessons to be learned from aerial warfare up till now. In this country we have so far escaped actual warfare of any kind, but it would be foolish in the extreme to refuse to take precautions on this account. In fact our authorities do not let the matter rest unheeded.

The experience of the *blitzkrieg* over Great Britain has given us new data for the consideration of the best type of shelter consistent with maximum safety. In so far as industrial undertakings are concerned, the underground shelter accommodating about 40 to 50 workers still holds the stage. It is clear, however, that the same considerations cannot apply to congested areas of civil population. It would often be an impossible task to provide safe underground accommodation for very large numbers, even if we were to ignore the cost. In a place like Calcutta, for instance, taking into consideration the nature of the ground, such a thing would be technically impossible. This is not to say it cannot be done elsewhere. If we take London as an example, the existence of tube railways and other tunnels makes it possible technically and financially to provide bomb-proof underground shelters for considerable numbers. The same holds good for many other places, but it is quite obvious that no uniform policy in this respect can be laid down, but that individual circumstances and features must guide action. It is undoubtedly true that most technical difficulties can be overcome by engineers, but at what cost? And impossible costs are a burden sufficient to counter balance any number of other advantages.

Deep underground shelters are not the final remedy, however. If daylight raiding only was to be provided for, the effect of a powerful fighter force taking the air to prevent it would be sufficient to make deep underground shelters quite unnecessary. Complications arise from the introduction of night bombing. In congested areas of population the latter forces drive people to shelter for the whole night, which raises the question of sleeping facilities and other amenities. Only in underground or big surface shelters can the problem be tackled with any degree of success. This is abundantly proved by the action the London authorities have taken in constructing new galleries from the existing tubes in some cases and in supplementing these surface shelters to accommodate 500 to a thousand men, women and children. It should be made clear, however, that at best only a portion of the population be dealt with in this way. A vital necessity in such an emergency is to achieve the maximum degree of dispersal of population by removing women and children and such men as are not actually engaged on useful work to the wide spaces of the countryside. When only the essential population is left, the whole problem becomes easier of solution.

In the countries mainly involved, such as England, the official policy had been from the very outset to rely on the dispersal of the population by removal, in the now famous Anderson Shelter in the case of England, in street shelters small enough to hold no more than fifty, in specially strengthened basements, etc. None of these provide absolute safety, although the Anderson Shelter, so easily erected in the garden or backyard of any house provided a degree of safety quite unexpected by many. Still, none of these are of any use against a direct hit. Against blast and splinter only, nothing more was really required. Even with night bombing it is noteworthy how small the casualties are by comparison with what might have been expected during prolonged bombing. But the necessity to stay in the shelters whole night considerably complicated the question, since sleeping bunks and other urgent conveniences necessary for health are almost impossible in small shelters. In addition, it is natural that people should be seeking absolute safety, and this rules out everything except deep underground shelters and those on the surface fully bomb-proof. With the increasing size and power of bombs used by aircraft, it is doubtful whether absolutely bomb-proof surface shelters are technically possible, although there is powerful opinion to suggest that it is possible. An independent Committee in England, consisting of engineers, architects, doctors and scientists, has made a special study of actual conditions arising out of the aerial *blitzkrieg* over London and other big cities and controversy now rages round the demands of this Committee. It is worth stating what its recommendations are.

It should be noted at first that the object of this unofficial body was at the very outset to force as far as possible the provision of absolutely safe shelters for the greater part of the population. As was stated earlier in this article, it is one thing for experts to recommend certain action and quite another for the authorities to carry that out. There is often a vast gulf between the two. The recommendations, desires and demands of this Committee must be viewed, therefore, in this light, always allowing for the many things Government has to take into consideration before doing anything. The Committee came to the conclusion that the present methods and manner of aerial warfare as practised by the Nazis demand the *construction of large and really bomb-proof shelters of the tunnel or "deep" type or built on the surface.* In the case of the latter, sufficient concrete and steel to make them absolutely safe. As indicated, the British Government has already gone some way in the provision of underground shelters through the medium of the tubes in London and elsewhere, but does not favour the general construction of large bomb-proof shelters. We cannot attempt to analyse all the factors influencing Government policy in this respect, but it should be noted that if for the time being there is no official acceptance of all the Committee desires steps have been taken in the direction of underground shelters. From this the authorities here ought to draw their own conclusions as to the nature of the precautions we have to take here. The problem is not the same here; and it is for engineers to make a study of the possibilities in so far as the big cities in India are concerned. Until victory is won we must realise that the threat is there and we must neglect nothing to provide maximum security for the population in advance. From what is taking place elsewhere we must learn.—*Indian Engineering.*

CALCUTTA NEWS & VIEWS A Digest

IF CALCUTTA IS AIR ATTACKED

In pursuance of the recent notification of the Government of Bengal a pair of slit trenches, the first of its kind in Calcutta, has been dug just on the northern front of the Octerlony Monument for the safety of the passers-by caught out in the open during an air attack.

The Government of Bengal are taking all steps for the preservation of old and valuable official records in case of an actual air raid.

This information is revealed by a letter addressed by the Government to the University of Calcutta, enquiring as to what steps the latter is going to take for the safety of its records in case of an air attack.

The letter states that though the Government are not building any bomb-proof shelters for the accommodation of their records during the period of a possible air raid in the city, they are adopting some other measures to meet any possible emergency.

A. R. P. WARNINGS

The Government of Bengal are undertaking intensive A. R. P. propaganda with a view to educating the public in precautionary measures which they should adopt in the event of an emergency.

A series of leaflets and posters are to be issued and some pamphlets are also being printed and will be distributed shortly. These give detailed information which will be useful to the public.

The first warning leaflet just issued draws the attention of the public to the possibility of incendiary bombs being dropped on Calcutta and tells them what to do in such an eventuality.

The leaflet runs as follows:—

Fire Warning.—Prepare now for what may happen in an air raid. Thousands of incendiary bombs may be dropped on Calcutta. One may fall in your house. Do not be afraid of them. They will not explode or hurt you if you do not throw water on them. They just burn away. In the first minute they throw out a lot of sparks which will set fire to things in the room.

Do all you can to put these fires out before they spread.

Do not be afraid of the bomb; it is harmless after the first minute except for its heat. Do not use a chemical fire extinguisher on the bomb itself; it may generate poison gas.

Have some buckets of water always ready so as to put out any small fires that are caused and some buckets of sand or earth and a shovel with which you can smother the bomb as soon as it stops spluttering.

Clear the roofs, top rooms and lofts of as much inflammable material as you can, certainly of curtains, mat, carpets or anything that is not essential.

Shut all doors and windows if you can; this will do much to prevent a fire spreading.

This is a Government warning: do not disregard it.

EMERGENCY TUBE-WELLS

An assurance of financial help is understood to have been received by the Government of Bengal from the Central Government in working out the former's scheme for sinking tube-wells in the City of Calcutta for ensuring requisite supply of drinking water to the citizens if the present sources are disturbed in case of an emergency.

The scheme, as it now stands, makes a provision for 2,000 deep and 500 shallow tube-wells for sewered and unsewered areas, respectively.

With the idea of starting the work very soon the estimated cost being about Rs. 25,00,000—the Government are now collecting the necessary materials for the purpose.

SCREENING STREET LIGHTS

The decision to screen the city's 6,571 electric and 19,249 gas lights as an air raid precautionary measure was taken at a recent Conference between the Government of Bengal and the authorities of the Calcutta Corporation.

As an experiment, it is proposed to screen the lights on Upper Circular Road between Shambazar and Beadon Street. When these lights, numbering one hundred are screened, an order will be issued requiring all house holders on either side of this stretch of road to black-out" their houses for about half-an-hour on one evening so that certain tests of traffic control can be carried out. To assist both pedestrians and traffic during this period it is proposed to put white paint on the kerb on the either side of the road and also on all islands, lamp posts, water hydrants and the like.

While the experiment will cost about Rs. 400, the screening of all the lights in the city will entail an expenditure of about Rs. 1,08,280 on the Corporation.

FOOD SUPPLY IN EMERGENCY

The only thing that can be done in Calcutta to ensure a supply of foodstuffs in case of an emergency, or actual air raid, would be to stock absolutely necessary articles such as rice, *dal*, salt, *atta*, *ghee*, potatoes, mustard oil, kerosene oil, in sufficiently large quantities in the Hogg Market, the College Street Market and the Entally Market where safe rooms may be available and can be utilized for the purpose, free of rent.

This suggestion is put forward by the Calcutta Corporation in a letter to the Government of Bengal on the subject. The letter says that giving effect to their scheme would require a very large amount of money and adds: "The Corporation of course is not in a position to provide this money, nor has it the power to spend money in such a way under the Act." The money will probably have to be found by the Government.

Arrangements will also have to be made for the supply of coal. Regarding the supply of vegetables, eggs, meat, fish, etc., the Corporation says that these articles generally come from neighbouring villages and special arrangements will have to be made for securing them from those places. Adequate supply of lorries and police guards, would also be needed.

"MAHAJATI SADAN"

Prayer To Vacate Attachment Order

Before Khan Bahadur Wali-Ul-Islam, Additional Chief Presidency Magistrate, Northern Division Police Courts, last week-end, a joint petition on behalf of Mr. Sarat Chandra Bose, Secretary, "Mahajati Sadan" and Mr. Nripendra Chandra Mitter, Secretary, "Subhas Congress Fund" was moved by Mr. P. C. Bose, Bar-at-Law instructed by Mr. Chunilal Dutt, Advocate, praying *inter alia* that the order for attachment and appointment of the Receiver in respect of the premises 166, Chittaranjan Avenue should be vacated and the claim of the petitioners be allowed.

The Magistrate passed the following order :—

"Fix 29th March, 1941, for hearing. Show it to the Public Prosecutor in case he wanted to oppose the petition on behalf of the crown".

The application stated *inter alia* that in July, 1938, Mr Subhas Chandra Bose applied to the Corporation of Calcutta for the lease of a plot of land in Calcutta so that with funds raised from the public a structure might be erected where a lecture hall, library etc., would be founded for the benefit and use of the citizens of Calcutta In his application to Corporation Mr Subhas Chandra Bose stated that a sum of Rs 30 000 already collected for the "Subhas Congress Fund" and other sums to be collected later would be utilised for the purpose The resolution passed by the Corporation in this matter as also the terms of the lease, the application stated, would show the purpose for which lease of the said plot had been granted

The structure was thereafter started the application stated, with the funds contributed by the public to the "Subhas Congress Fund" under the management of a Committee of which Mr Sarat Chandra Bose was the Secretary.

It was also stated that Mr Subhas Chandra Bose did not contribute any thing to the Fund himself and all money so far spent, came from the said "Subhas Congress Fund" Mr Subhas Chandra Bose had no beneficial interest in the property and he was a mere trustee and was acting not on his own behalf but on behalf of the public

DAY OF PRAYER

In accordance with the wish of His Majesty the King-Emperor, Calcutta, in common with the rest of the British Empire, observed on Sunday last as a National Day of Prayer. Thanksgiving and Intercession Services were held in churches of various denominations and special prayers were offered in many temples and other places of worship.

GOVERNOR'S CONFERENCE

The Party Leaders Conference at the Government House, was held on Saturday last again. Among the members Mr. Sarat Chandra Bose, who had left for Dacca the previous night, did not attend.

The main subject for discussion, it is understood, was the riot situation in Dacca, where from all available reports, the situation had been brought under control. Dr. Shyamaprasad Mookerjee, who had returned from Dacca yesterday (Saturday afternoon) attended the Conference and apprised the Governor and other members of the Conference of latest situation there.

Other prominent persons present included Mr. A. K. Fazlul Huq, Mr. H. S. Suhrawardy, Sir B. P. Singh Roy, Mr. M. B. Mullick, Mr. J. N. Basu, Mr. K. Sahabuddin, Mr. Kiron Shankar Roy, Mr. Nalini Ranjan Sarker and Mr. Hem Chandra Naskar.

The Conference met again on Tuesday.

BENGALI LITERATURE AND FREEDOM MOVEMENT

Mr. Profulla Kumar Sarker, Editor of the *Ananda Bazar Patrika*, delivered an interesting lecture on "Contribution of Bengali Literature to Nationalist Movement" at the Women's College on Tuesday last. Girl students of different colleges in the city were present.

Mr. Sarker said that side by side with the constitutional movement of the Congress and even before that, Bengal possessed an under-current of freedom movement. Bengal's poets, literateures and missionaries had kept this current flowing They had prepared the field for half a century and keeping this field in the background, Sri Aurobindo, Bipin Chandra Pal and other leaders preached the ideal of complete independence in later years. These two currents of the nationalist movement had mingled and formed the great stream of the Swadeshi movement, which had flooded the country. Bankim Chandra was the keystone of the arch formed by the Poet Rangalal on one side and Sri Aurobindo on the other. Bankim Chandra's ideal found its expression and form in Vivekananda. The great Swami was a volcano of patriotism. In every line of his writings the ideal of selfless work and service to humanity found clear expression and countless selfless youths of Bengal jumped into the field of activity being inspired by that ideal. The speaker further said that the contribution of Bengali literature to the nationalist movement was extraordinary. For this the whole of India was indebted to Bengali literature. In the opinion of the speaker this literature was one of the best in the world.

CASE AGAINST PREMIER

Mr. S. M. Murshed, Counsel for Mr. A. K. Fazlul Huq, Premier of Bengal, showed cause before Mr. R. Gupta, Chief Presidency Magistrate, on Saturday last (March 22) as to why a process on a charge of defamation should not be issued against Mr. Huq on the complaint of Mr. Phanindra Nath Mookerjee, Advocate practising in the Calcutta Police Courts, in connextion with a statement of Mr. Huq, published in newspapers on March 2, making certain allegations against Hindu lawyers, professors, etc., with regard to census operations in Bengal.

Counsel prayed for the issue of a process against Mr. Huq.

Orders were passed on Wednesday last (March 26) dismissing the complaint by Mr. R. Gupta, Chief Presidency Magistrate, Calcutta.

The Magistrate, referring to the question as to whether a complaint like the present one could, in law, be entertained said that he had had the advantage of hearing very interesting and helpful arguments from Mr. Murshed, counsel for the opposite party (Mr A K Fazlul Huq) and Mr S N. Banerjee, counsel for the complainant (Mr. P N. Mookerjee).

In the course of his judgment, the Magistrate said that "a number of cases bearing on the question before me were cited and discussed. From a reading of these cases, it appears to me that the principles laid down by the courts in England and in India are uniform and clear.

"As I have been able to understand them, these principles in effect lay down that when the whole of a very large class of persons has been defamed, no individual can file a complaint for defamation Nor can such action lie if an unspecified and indefinite number of persons out of a large class have been defamed unless the individual who wants to file the complaint can show that the defamatory words were really intended to apply to him."

STUDENTS CONDEMN DACCA RIOTS

Condemnation of the Dacca riots was voiced and an appeal for restoration of inter-communal harmony and amity was made at a meeting of Hindu and Moslem students held at Sraddhananda Park, Calcutta on Monday evening. Mr. A. K. M. Fazlul Quader Chowdhury, General Secretary All-India Moslem Students' Federation, presided.

The meeting suggested the formation of joint peace squads by Hindu and Moslem students who would go round the affected areas and other places and preach the message of goodwill and harmony between the communities.

It was decided to open a fund for the relief of both Hindu and Moslem victims of the riots, and the meeting appealed to the public for funds.

THE LOUD-SPEAKER NUISANCE

Is a loud-speaker or any such electrically operated means of producing loud noise in the city of Calcutta or in other municipal towns of the province a 'menace'?

Government of Bengal, it appears wants to be satisfied if it is actually a 'menace' and in that case whether the existing powers enjoyed by municipal bodies are adequate enough to control the operations of loud-speakers.

So far the city of Calcutta is concerned the Bengal Government has drawn the attention of the Corporation authorities to Section 585 of the Calcutta Municipal Act which provides for a remedy in case the operation of the loud-speaker and other electrically operated means of producing loud noise in Calcutta actually amounts to a 'menace' within the meaning of Section 3(47) of the Act.

The Government of Bengal has further requested the Corporation to favour it as early as possible with the views of the Corporation as to whether the specific provision in the Calcutta Municipal Act are adequate for purpose of control of loud speakers etc., or whether it would be desirable to undertake legislation to provide for greater powers of control over these means of producing loud noise.

The Chief Law Officer of the Corporation in this connection has intimated the Estates and General Purposes Committee of the Corporation that the existing provisions of the Calcutta Municipal Act are not adequate for the purpose of these instruments. But whether they should at all be controlled or not is a concern for the Corporation and is to be decided after consulting the views of the citizens

SATYANANDA ROY MEMORIAL

Calcutta Corporation Inter-School Sports

The Satyananda Roy Memorial Committee under the auspices of the Calcutta Corporation Inter-School Sports Association held its First Annual Sports at the Mohanbagan Ground on Tuesday morning (25th March) It was a complete success More than two hundred boys and girls of the Primary Schools participated in the finals of the different events with keen competition right through A large number of school children were present to encourage the competitors Among others present were the Deputy Mayor Mr. Phanindra Nath Brahma, the Chief Executive Officer Mr. J. C. Mukerjea, the First Deputy Executive Officer Mr. Sailapati Chatterjee and the Education Officer Dr. A. Barua and Councillor Krishna Chandra Ghose and others graced the occasion with their presence. Messrs. Nirmal Sinha, D. N. Guin, B D. Chatterjee, Abu Yusuf, Dr. Saumotha Dutt and Miss Sarala Chakrabarti acted as judges. The girls of Jatiya Juva Sangha played the band Owing to the generosity of Councillor Kabiraj Satyabrata Sen, the competitors could be treated to light refreshments after the sports The following gentlemen of the Education Department of the Corporation, Messrs. Probhat Chatterjee, Sailendra Kumar Bose, Naresh Das and Baidyanath Mandal were all attention to the guests. The success of the function was mainly due to the indefatigable labours of Mr. Jibanchandra Chakravarty, the Hony Secretary of Satyananda Memorial Sports Committee

The School Champions were Mirzapur Street School (boys section) and Cornfield School (girls' section) Individual championship among the girls was won by Rashemara Khatoon of the Jainuddy Mistry Lane School Mr S. N Banerjee, Bar at Law presided

The trophies and prizes were kindly distributed by Mrs. J. C. Mukerjea. The vote of thanks were given by Mr. J C. Mukerjea, the Chief Executive Officer who kindly declared Wednesday and Thursday (26th and 27th March) as holidays for the successful termination of the sports

CORPORATION CO-OPERATIVE CREDIT SOCIETY LTD

New Loan Policy

The following rules adopted at the meeting of the Board of Directors held on March 12, 1941, writes Mr U N. Bose, Hony. Secretary to the Calcutta Corporation Co-operative Credit Society :—

In modification of previous resolutions, the following rules shall hold in regard to the regulation of the grant of loans to members and realisation of the same from them :—

1. The amount of loan to be granted to a member shall be decided according to the following scale :-

(i) Length of permanent service below 6 months—No loan. (ii) Members having put in permanent service for three complete years—Amount of loan shall not exceed 15 times of salary. (iii) Members having put in more than 3 years' permanent service—(a) Amount of loan shall not exceed 20 times (b) in special cases of urgency loans not exceeding [illegible] of salary of a borrower may be sanctioned on the vote of a majority of 2/3rd of the Directors present at a meeting and voting for the same.

Note :—An employee of the Corporation will be considered to be in permanent service from the date on which he begins to contribute to the Corporation Provident Fund.

2. The maximum of monthly instalments of principal of a loan sanctioned shall be as follows :—

(i) For members drawing a monthly gross salary upto Rs. 250—1½ per cent of principal. (ii) For members drawing a monthly gross salary from Rs. 251 to 500—2 per cent of principal (iii) For members drawing a monthly gross salary above Rs 500—3 per cent. of principal.

3. The grant of loans will be subject to the furnishing of sureties as specified below :—

(i) Loans below Rs. 1,000 repayable within one year—One surety. (ii) In all other cases—At least 2 sureties. (iii) The above rules regarding furnishing number of sureties are ordinarily subject to the proviso (a) that the maximum liability that may be incurred by a member as a borrower and a surety shall not exceed 60 times of the gross salary, it being understood that in special circumstances, the Secretary is authorised to accept sureties above the usual maximum (on furnishing sureties of approved merit) after due consideration of the joint and several liabilities of the sureties offered in such cases, and (b) that in case of a female borrower, a male surety should be furnished by the applicant whenever a loan exceeds Rs. 1,200.

4. (i) The existing procedure of depositing of balance towards one-third of an existing loan in cash for reborrowing purposes shall be discontinued (ii) Reborrowing shall not be allowed before deduction of 6 regular instalments of an existing loan from the salary of the borrower.

5 In case of a borrower who is 50 years of age or above, the amount of loan to be granted and the amount of instalment to be deducted will be so determined that the entire amount of the loan is paid off before his normal date of retirement from the Corporation service provided, however, that in determining the amount of loan to be sanctioned and the percentage of monthly instalements repayable in such cases, the Board may take into consideration the value of the shares held by a member.

6. One-sixteenth per cent (i.e, one anna per hundred rupees) is to be deducted from each loan towards the Sinking Fund which would be non-refundable and would be maintained as a set off against any Bad and Doubtful Debts.

LEGAL INTELLIGENCE

APPEAL BY BANK

(Before Mr. Justice Mukherjea and Mr. Justice Biswas)

NATIONAL BANK OF INDIA LIMITED—APPELLANT

vs.

THE CORPORATION OF CALCUTTA—RESPONDENT

This was an appeal preferred by the National Bank of India, Limited, against the decision of the Small Causes Court Judge at Sealdah, dismissing the appeal of the bank.

It appeared that the appellant bank preferred an appeal before the Small Causes Court Judge, Sealdah, against the assessment of premises No. 17, Alipore Road, by the Corporation of Calcutta under Section 127 (b) of the Calcutta Municipal Act which contemplated the case of a house not erected for letting purposes and not ordinarily let. It was contended that the proper section under which the premises should have been assessed was Section 127 (a) of the Act, which contemplated the case of a premises erected for letting purposes or ordinarily let.

The facts of the case were that the appellant bank purchased the premises from the Official Trustee of Bengal in 1920. Before the purchase the National Bank of India was a tenant in it at a monthly rental of Rs. 600 and the Manager of the bank continued to reside there even after the purchase. Before the purchase the premises were assessed under Section 127 (a). The next assessment was made in 1932-33 and the premises was assessed under Section 127 (b). (Premises not for letting purposes). No appeal was preferred against it. In the re-assessment in the year 1938-39, the appellant bank objected and contented that the assessment should be made under Section 127 (a).

The contention of the appellant bank was that the occupation of the premises by the Manager of the bank was the occupation of a tenant and not a servant and in support of it the case of 4, Theatre Road which was the house occupied by the Commissioner of the Presidency Division and which had been recently decided by the High Court, had been cited.

The Small Causes Court Judge found that from the facts of the present case it appeared to him that the premises should have been assessed under Section 127 (a) and not under Section 127 (b) of the said Act. But when the bank presented itself before the Corporation both as owner and occupier of the premises it could not now say that assessment should have been made under Section 127 (a). The bank preferred no appeal against the re-assessment of 1932-33 though the assessment was made under Section 127 (b) and allowed itself to be recorded as owner and occupier of the premises and the bank could not now say that it was not the occupier but its Manager was the occupier as a tenant. The judge accordingly dismissed the appeal of the bank. Against the decision the present appeal was preferred, on the ground amongst others that court below erred in law in holding that the conduct of the bank in course of the revaluation of 1932-33, must compel it to accept the same method of valuation of the premises in suit in 1938-39.

The Court admitted the appeal.

Mr. Basanta Kumar Mukherjee appeared for the appellant bank.

CORPORATION NOTICES

To Contractors

Tenders are invited in duplicate for the following and will be received by the First Deputy Executive Officer on the date noted for each, up to 2 p.m Each tender in duplicate must be enclosed in a sealed cover and superscribed—"Tender for ....." For specifications and tender forms apply to the Keeper of Records between 11 a.m. and 3 p.m on week days and 11 a.m. and 1 p m on Saturdays Price Rs. 2 per set.

1 Supply of Mother Binders during 1941 42.

2 Supply of Unani Medicines during 1941 42.

3. Supply of Disinfectants during 1941 42.

4 Cutting and restoring trenches in public roads for laying water mains during 1941 42

Tenders for 1 and 2 will be opened on 8th April and for 3 and 4 on 18th April, 1941 The rates quoted in tenders for the above are to hold good for three months.

N B—All cases of delay over a fortnight in the execution of agreements in respect of works and supply of materials will be reported to the Committee and the parties will not be allowed to execute the agreements after that period without obtaining orders of the Committee

In case a party deposits earnest money by cheque, he must deposit the cheque at least three working days before the date of opening of the tender.

The contractors should maintain an uniformity of their names and styles of business, appearing on various documents, *e g.*, Treasurer's receipts, tender forms, agreements licenses and bills.

Any deviation from this on the part of any contractor whenever detected, will render his tender liable for cancellation.

Where tenders are submitted by a Corporation, it should be signed by a principal officer of the Corporation or by an agent duly authorised in that behalf and be attested by a witness. Where it is submitted by a firm, it should be signed by the proprietor or one of the partners or by an agent duly authorised in that behalf by the firm and be similarly attested

M. RAY,
Offg. Secretary to the Corporation.

Central Municipal Office,
The 26th March, 1941

Time Extended.

Re : Registration of names as contractors for Petty Plumbing and Petty Improvement Works for the year 1941-42.

The date for receiving applications for registration of names as contractors for the following has further been extended. The applications for (1) and (2) below will be received by the Second Deputy Executive Officer upto 2 p.m. on the 22nd April, 1941, instead of on the 31st March, as previously advertised

(1) Petty Plumbing and House Drainage Works of the Corporation for the year 1941-42

(2) Petty Improvement Works (other than petty plumbing and house drainage works) of the Corporation for the year 1941-42

BHASKAR MUKERJI,
Secretary to the Corporation

A. QASIM,
Actg. Superintendent,

S. S. Hogg Market,
The 18th March, 1941.

CORPORATION NOTICES—*Contd.*

Carriage and Horse Tax Etc.

1st Half-Year, 1941-42

Owners and persons in charge of carriages, jinrickshaws, racehorses, horses, ponies or mules, are hereby informed that Section 167 (1) and (2) of the Calcutta Municipal Act, 1923, requires that a statement showing the number of vehicles and animals owned or kept in their charge, together with the tax payable, should be forwarded to the Municipal Office before the 1st May, 1941. Printed forms of such return may be obtained on application to the License Officer at the Central Municipal Office It is further notified that failure to forward such return entails liability to prosecution and to a fine of Rs. 20 Persons, who, for the sake of convenience, prefer to make payments of taxes on the spot, may pay such amount as may be due, to the Inspector, when he calls; he is authorised to receive money and grant license then and there Claims for remission of tax on carriages on the ground that they were not used, will not be entertained after the 30th June, 1941.

Registration of Carts.

The half-yearly registration of carts under Section 183 of the Calcutta Municipal Act, 1923, for the current half year begins on the 1st April, 1941. Owners of carts, including hand-carts, which are not used for the conveyance of human beings, should get them registered without delay. The fee payable for registration of every cart shall be Rs 4 An additional charge of one rupee shall also be payable in each case for the number-plate to be affixed to the cart.

Cart Drivers' Ticket

Under Section 187 of the Act, drivers of carts are required to carry (exposed to view) a ticket granted by the Corporation bearing the registration number as driver

Tax on Dogs

Under Section 173 of the Act, a tax at five rupees per annum is payable for every dog kept in Calcutta and the owner or person in charge is required to forward to the Municipal Office before the first day of May a list of dogs owned by him or in his charge and at the same time pay to the Corporation the tax payable in respect of every such dog. On payment of the fee, a license will be issued for the current year and a number ticket will be provided to be kept attached to the collar or otherwise suspended from the neck of the dog. Any dog which has no number ticket so attached or so suspended runs the risk of being seized or destroyed

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—
10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.
Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

The Week In The Corporation

Last Corporation Meeting Of The Year

Four Requisitions Disposed Of

THE last meeting of the Corporation for the year 1940-41 which was held on Monday, the 31st March was a Special Meeting. This meeting was preceded by four other Special Meetings called on requisition.

Of these four Special Requisition Meetings the first requisition was withdrawn, the second requisition was referred to the Finance Standing Committee, the third was ruled out of order by the Mayor (Mr. A. R. Siddiqi), while the fourth fell through for want of requisite support.

SMALL-POX: YOU NEED NOT GET IT AT ALL
GET YOURSELF VACCINATED

C. E. O.'s Appointment

The proceedings of the Special Meeting which followed four Requisition Meetings referred to above were held up by the discussion of the question relating to the re-appointment of Mr. J. C. Mukerjea. The discussion will be found in a Supplement to this issue. The House adopted the following resolution in this connection :—

"That in the present emergency and in the face of the legal impasse, Mr. J. C. Mukerjea do continue to act as Chief Executive Officer subject to the powers delegated to him and by him re-delegated to his officers until a statutory meeting is called to submit a fresh proposal to the Government.

The resolution was carried by 39 to 28 votes.

Watering Of Streets

A Requisition signed by Alderman H. C. Nasker and Councillors Madan Mohan Burman, Z. Ahmed, S. C. Varma, M. K. Majumdar, G. D. Mohata, S. K. Sarkar, A. L. Poddar, J. N. Mondal, Md. Israil, A. Matin, H. Md. Yusuf, N. C. Paul, B. K. Banerjee, J. C. Ghose, B. B. Sarcar, A. S. Nasker, J. N. Kolay, A. Mukherjee, S. K. Chatterjee, Prafulla K. Dutt and K. Choudhury tabling a motion "that the Executive be directed to resume the watering of streets, roads and lanes as before twice or thrice every day immediately by expert and experienced watering men who had worked previously," was withdrawn by the signatories on the assurance of the Mayor that he would see that the object of the motion was carried out.

Cut On Officers' Salaries

The consideration of the following motion tabled by Councillors N. C. Chatterjee, B. B. Sarcar, S. K. Mitter, Hari Har Das Chowdhury, A. L. Poddar Prafulla K. Dutta, M. L. Mackar, N. N. Dalal, D. Mazumdar, J. C. Ghose, Dhirendra Nath Ghosh, B. K. Banerjee, Provanshu Kumar Sett Satyabrata Sen and Krishna Chandra Ghose was postponed until a detailed report on the matter was received from the Finance Standing Committee, which was requested to submit it within a month :—

"That the resolution of the Corporation, dated the 21st March, 1941, imposing a cut on a graded scale on the salaries of the officers and employees of the Corporation drawing a salary above Rs. 250 per month, be rescinded and the matter be reconsidered and that no action be taken until the motion is finally disposed of."

District Health Officer, District IV

The following requisition signed by Councillors Naresh Nath Mookerjee, A. L. Poddar, M. L. Mackar, Harihar Das Chowdhury, B. Ganguly, N. C. Paul, F. C. Ghose, Debjiban Banerjee, M. K. Majumdar, H. K. Ghose, J. N. Mondal, Satish C. Bose, D. N. Mukerjee, Kshitish Chandra Chakravarty, D. Mazumdar and B. B. Sarcar, tabling the motion given below was ruled out of order by the Mayor :—

"That the resolution of the Services Standing Committee No. I, dated the 12th March, 1941, appointing Dr. M. U. Ahmed, District Health Officer, District IV in the senior grade superseding the claims of the senior District Health Officer II, Dr. S. N. Das, who has been working in the senior grade for nearly 9 months in the permanent chain of Dr. S. N. Ghose appointed Health Officer, be revised and re-considered and that effect be not given till the matter is finally disposed of"

[*Note by the movers* :—

It is a case of supersession and it contravenes the Rules passed by the Corporation. Besides, the resolution passed by the Services Standing Committee on the 12th March, 1941, is illegal and *ultra vires*, as this resolution has been passed neither rescinding nor modifying the previous resolutions of the said Committee dated the 1st December, 1939 and 20th July, 1939.]

Assistant Sanitary Officer, District III

The next requisition signed by Councillors N. C. Chatterjee, D. Mazumdar, D. N. Mukherjee, Sushil C. Sen, Bepin Behari Sadkhan, Hriday K. Ghose, B. B. Sarcar, M. L. Mackar, B. B. Ganguli, K. C. Ghose, Dhirendra Nath Ghosh, P. B. Khatick, M. K. Mazumdar, S. K. Mitter, B. S. Nahar, Hari Har Das Chowdhury and Hamoodur Rahman had tabled a motion seeking to revise and rescind the appointment of an Assistant Sanitary Officer in District III, in place of Dr. Ram Bhattacharji (dismissed) made by the Services Standing Committee No. II on 24th March, 1941, and to re-consider the matter pending which no letter of appointment was to be given. The requisition fell through for want of a seconder.

HOLIDAY

On account of Easter Holidays, there will be no issue of the "Gazette" on the 12th April, 1941. The Market Prices current will, however, be issued on that day and will be available at Municipal Markets.

The next issue of the "Gazette" will appear on the 19th April, 1941.

Grants To Free Libraries

The question of grants to Free Libraries in Calcutta was considered and the following resolutions were adopted :—

(1) *That in modification of the Corporation resolution dated the 2nd October, 1940, the 25 per cent. cut in grants to Libraries be not enforced this year and that the grants as sanctioned in the previous year be continued this year also.*

(2) *That in view of the present financial stringency no Library should be given any increased grant or capital grant this year.*

(3) *That the grants to Libraries (aggregating Rs. 52,330) as recommended by the Estates and General Purposes Standing Committee and as shown in column 15 of the list, be sanctioned for the year 1940-41.*

(4) *That under Section 95 of the Act, a sum of Rs. 12,800 be appropriated from the closing balance to meet the excess over the Budget provision for grants to Libraries.*

Grants To Certain Hospitals

A grant of Rs. 57,000 (equivalent to last year's grant) to the Carmichael Medical College Hospital was sanctioned for the year 1940-41, subject to the usual conditions.

The question of making a grant to the Govinda Sundari Ayurvedic College and Hospital for the year 1940-41, was referred back.

Grants To Primary Schools, Etc.

The question of sanctioning grants-in-aid to primary schools and primary departments of post-primary and secondary schools for the year 1940 41 was considered and the following resolution was adopted *inter alia* :—

* * * *

(5) *That grants to primary schools and primary departments of post-primary and secondary schools as recommended by the Primary Education Standing Committee and as shown in the last column of the lists, be sanctioned for the year* 1940-41.

(6) *That a Councillor, preferably a Ward Councillor do represent the Corporation on the Managing Committee of the institutions which are in receipt of a grant of Rs. 400 or more.*

(7) *That the amount required to cover the excess over the budget provision under B. I. 82-B (a)—Grants to primary schools—be appropriated from the closing balance under section 95 of the Act.*

(8) *That it be a direction to the Chief Executive Officer to take into strict account the provision of Section 88-A of the Calcutta Municipal (Amendment) Act, 1933, before the grants to the individual institution are actually disbursed.*

MR PULIN BEHARI MULLICK'S BEREAVEMENT

We deeply regret to record the death of Dipti Mullick (Dolly), daughter of Mr. Pulin Behary Mullick, M.L.A., Councillor, Corporation of Calcutta. She passed away on the 24th March last. She was born on November 17, 1935. She was a meritorious student of the Binapani Girls' High School We offer our condolences to Mr Mullick and the members of the bereaved family

If Calcutta Is Air-Attacked

Protection Of City's Essential Services

THE necessity of formulating definite schemes to meet emergencies arising out of damage to the water mains, sewers, drains, pumping stations etc., in Calcutta in the event of an actual air raid on the City is stressed by the Government of Bengal in a communication addressed to the Calcutta Corporation

The Government urge that arrangements should be made at once for the collection of necessary materials and spare parts and for the formation of repairing squads to be available wherever necessary They also urge that proper arrangements should be made for the removal of night soil after an air attack particularly from areas where there are service privies.

The Government have requested the Corporation to communicate to them without the least possible delay such action as it may decide to take in the matter.

The Government communication points out the immediate necessity of formulating definite schemes for the protection and maintenance of the Pumping Stations, mains, sewer and water-supply in the city in the event of an emergency arising out of damages to these executive services as a result of an air raid.

The Government further points out that in the event of damages to the water-mains, sewers, drains, pumping stations etc., in Calcutta it will be necessary to take immediate steps for their prompt repair. Arrangements should, therefore, be made for the collection of necessary materials and spare parts and for the formation of repairing squads to be available whenever necessary. It is also essential, adds the Government communication that proper arrangements should be made for the removal of night soil after an air attack, particularly from areas served by service privies.

The Government also discusses the question of strengthening the Calcutta Fire Brigade so as to enable it to deal effectively with fires that might be caused by air raids.

As no fire-fighting arrangements was possible without an adequate supply of water, the Government have requested the Corporation to see to it that all tanks in public squares and elsewhere, belonging to the Corporation, might be made accessible on all sides to the fire engines and the water tanks might also be placed at the disposal of the Fire Brigade for obtaining the necessary supply of water in case of a break-down of the existing pumping stations

The Government also have addressed a communication to Corporation requesting it to supply them with a complete list of technical and non-technical hands in its employ in different departments.

TRENCHES DUG

At the instance of the Government of Bengal, the Corporation has, started the work of digging out squatting trenches in different parks and public places in the city.

To begin with, one sample trench each in five principal parks, namely, Deshabandhu Park, Sradhananda Park, Tallah Park, Park Circus, and Deshapriya Park will be dug. When this is approved by the authorities, the work in the other parks and public places in the city, numbering about one hundred, will be taken up. Each park will be provided with half-a-dozen trenches.

STOCKING FOOD SUPPLY FOR EMERGENCIES

The only thing that can be done to ensure supply of foodstuffs in case of an emergency or actual air-raid would be to stock absolutely necessary articles such as rice, dal, salt, atta, ghee, potato, mustard oil, kerosene oil, etc., in sufficiently large quantities in the S. S. Hogg Market, College Street Market, and Entally Market where safe rooms may be available and can be utilised for the purpose, free of rent.

This suggestion is put forward by the Calcutta Corporation in a letter to the Government of Bengal in regard to the question of maintenance of adequate food supply in the city and suburbs in case of an actual air-raid or emergency.

Such stocking of food, however, it is pointed out, "will require a very large amount of money which will have to be found if such a stock has to be maintained," the letter points out, and adds "the Corporation of course is not in a position to provide this money, nor has it the power to spend money in such a way under the Act. The money will probably have to be found by the Government, but it will certainly provide all possible facilities for stocking the necessary foodstuffs, if money is forthcoming."

Supply Of Coal

It is further suggested in the letter that arrangements will also have to be made for the supply of coal which is as much necessary as the foodstuff.

Regarding the supply of vegetable, egg, meat, fish, etc., the Corporation expresses the opinion that these articles generally come from the neighbouring villages and special arrangements will have to be made for securing them from those places. Adequate supply of lorries, provision of police guards, etc., will have to be made to meet the special requirements in case of actual emergency.

Municipal Markets

The Corporation have pointed out to the Government the Municipal Markets supply only a very small fraction of the food consumed by the public of Calcutta. There are other big private markets over which it has very little control. These markets supply the main requirements of the citizens. In fact, all the main roads of the city have the appearence of markets and the Corporation has got no power to confine the retail business within the markets, either Municipal or private. The dealers in the Municipal Markets, who are mainly retail dealers, get their supply of foodstuffs from the *Aratdars* inside the city. It is probable that in case of an emergency of air-raid there will be a great scare amongst the public and many of these wholesale dealers would leave the city in panic. The actual foodstuffs inside Municipal Markets, if they are not replenished from outside *Aratdars*, will hardly last a couple of days.

PREMIER'S CALL TO PUBLIC

The possibility of Bengal, particularly Calcutta and neighbouring industrial areas, being subjected to air attack was the subject of a broadcast talk by Mr. A. K. Fazlul Huq, the Premier, from the Calcutta station of All-India Radio.

Because so far India had not been the target of direct enemy action it did not mean that the country would never have to face aerial bombing, he emphasized. "It is not my intention to cause undue panic but I consider it my duty to utter a note of grave warning to my countrymen against any complacency", he said. "It is absolutely essential that we should, with the smallest possible delay, be prepared as far as possible for every emergency."

"We are often asked", he continued, "what the Government of Bengal are doing about active defence measures. It is not for me to enter upon a discussion of this subject: the matter is one for the Central Government. I may be permitted to say, however, that the Government of Bengal are in close touch with the authorities responsible for defence. I am sure that nothing that is practicable will be left undone.

Plan For Trenches

"At the very beginning let me make one thing perfectly clear. There is no protection whatever against a direct hit by a high explosive bomb. It is well-known that in spite of most elaborate precautionary measures extensive damage to property has been caused and toll of human life taken in the cities of Great Britain by enemy bombs registering direct hits. Calcutta and other threatened areas in Bengal are at a disadvantage, compared for instance, to London. In London the underground railway tunnels and cellars provide excellent deep shelters during air-raids. It is obvious that similar shelters cannot be provided in Calcutta.

"In conclusion let me take this opportunity of once again drawing the attention of the public to the seriousness of this problem of passive air defence

2,500 Tube-Wells For Calcutta

India Government To Bear Entire Expense

The Government of India have, it is learnt, agreed to bear the whole expenses, amounting to Rs. 16,00,000, to be incurred by the Government of Bengal in sinking tube-wells in different parts of the city for ensuring requisite supply of drinking water to the citizens in the case of the present sources being disturbed by any possible air-raid on the city.

The scheme, formulated on this connection by the Calcutta Corporation at the instance of the Government of Bengal, provides for 2,000 deep and 500 shallow tube-wells in sewered and unsewered areas in the city, respectively.

or A. R. P. and to emphasize that your protection and the protection of your family must, in large measure, depend on you taking certain necessary precautions. You can yourself do much to minimise the risk to yourself and to those dependent on you. From now on there will be a steady flow of Press Notes, leaflets and posters telling the public what to do before, during and after an air-raid and drawing their attention to literature on the subject. The instructions that will be given should be carefully studied and followed. Every detail given will be important. Your co-operation will be a definite contribution to the winning of final victory. I am confident that you will not fail."

For London Air-Raid Victims

Bengal Assembly Grants A Lakh For The Mayor's Fund

BY 113 votes to 37 the Bengal Assembly on Monday, the 31st March, passed a token demand made by the Premier (Mr. A. K. Fazlul Huq), in connection with a proposal to contribute Rs. 1,00,000 to the fund inaugurated by Mr. Abdur Rahman Siddiqi, Mayor of Calcutta (1940-41), for the relief of London air-raid victims.

In placing the "demand" before the House, the Premier explained that it was proposed to make the grant out of savings under the head "Miscellaneous" in the current year.

The "demand" evoked considerable controversy, the opposition maintaining that the grant could not be made out of the provincial revenues under Section 150 (1) of the Government of India Act, 1935.

It was pointed out that under that section no burden "shall" be imposed on the revenues of the Federation or the Provinces except "for the purposes of India or some parts of India" and that by no stretch of imagination the grant asked for could be construed to be "for the purposes of India or some parts of India."

"GESTURE OF GRATITUDE"—Says The Mayor

Mr. A. R. Siddiqi, Mayor of Calcutta (Coalition—Moslem Chamber of Commerce) said that the proposed contribution constituted a gesture of gratitude on the part of the people of Calcutta towards the people of London. The present Lord Mayor of London as well as his predecessors had always come to the assistance of India whenever this country had suffered from any calamity. Therefore when innocent women, children and others were being murdered, it was only an act of gratefulness on their part to make this gesture of goodwill and sympathy to them.

Despite the cries of the Congress and the League, the whole of India had gone to the assistance of Britain. Their boys were fighting magnificently in Africa. London notwithstanding the ordeal that she was going through had been sending various articles for the comfort of Indian troops. Was it too much, he asked, to send in return Rs. 1,13,000 to London for the relief of air-raid victims?

> *Let London know that there were hearts in Calcutta which beat in unison with those in London in the matter of the suffering of its civilian population among whom were included many Indian men, women and children.*

Speaking on behalf of the Government, Hon. Mr. A. K. Fazlul Huq pointed out that they had consulted legal opinion and members of the Cabinet were fully satisfied that this expenditure came within the purview of Section 150 of the Government of India Act.

The Hon. Speaker (Sir M. Azizul Haque) said that the question of interpretation of the Section was not free from difficulty. Pending a decision of the courts to the contrary, he held that the motion was in order. In his opinion such a grant would be for the purposes of India "for the simple reason that they were merely reciprocating the feelings of humanity which other countries had done.

ABDUR RAHMAN SIDDIQI
Mayor of Calcutta

The Leader of the Opposition, Mr. Sarat Chandra Bose, said that the Premier had stated that he had taken legal opinion on this subject. He (Mr. Bose) wished that the Premier had vouchsafed

to the House the name of the lawyer who had given the opinion because so far as legal opinon was concerned much depended upon the person consulted.

He and his party had no quarrel about the humanitarian aspect of the proposal. He would be glad if all sections of the House and the community contributed from their own resources not Rs. 1,00,000 but lakhs and lakhs for the relief of air-raid victims. But the question before the House was a limited one, namely, whether the proposed contribution was legal. In his opinion the purpose for which the contribution was proposed to be made was entirely foreign to section 150 (1). He warned the House that on a constitutional question humanitarian considerations did not arise.

Mr. Nalini Ranjan Sarker, ex-Finance Minister, maintained that it would be a dangerous precedent to create to make such a grant out of the provincial revenues.

Mr. Sasanka Sekhar Sanyal, Chief Whip, Bengal Congress Parliamentary Party, moved a cut motion to discuss the "principles underlying the contribution."

Following a debate lasting two hours the cut motion was negatived by the House by 121 to 41 votes and the grant asked for by the Chief Minister was sanctioned by 130 to 87 votes, as already stated

Chief Executive Officer's Powers And Functions

The Circulars

The circular of the Chief Executive Officer referred to in the discussion at the Corporation meeting on Monday relating to his appointment as also the subsequent circulars issued by him are given below

(I)

Powers and functions delegated or re-delegated by me as Chief Executive Officer to different Officers of the Corporation are hereby withdrawn.

(Sd.) J. C. MUKERJEA,
Chief Executive Officer

Dated the 31st March, 1941.

(II)

CORPORATION OF CALCUTTA
Secretary's Department,
The 2nd April, 1941.

It is hereby notified for general information that the Chief Executive Officer's circular dated the 31st March, 1941, by which he withdrew the powers and functions delegated or re-delegated by him as Chief Executive Officer to different officers of the Corporation is hereby *cancelled*. A note of the Chief Executive Officer in this connection will be circulated later

By order of the Chief Executive Officer,
(Sd.) B. MUKERJI,
Secretary.

(III)

CORPORATION OF CALCUTTA,
Secretary's Department,
Dated the 1st April, 1941.

Secretary,

The Corporation yesterday directed that I should continue as Chief Executive Officer till the matter is again considered by them in the manner laid down by rules, and I also passed an order revoking my order withdrawing delegations and re-delegations subject to the condition that the powers and functions previously delegated or re-delegated should be exercised under my supervision. The order of withdrawal of powers and functions had been passed by me for the reason that I did not wish to place the Departmental Heads or myself into difficulties. The exercise of powers involved responsibilities and during my absence Departmental Heads might get involved in trouble because of the uncertain situation.

I have been expecting Government approval to the Corporation decision of yesterday, but this has not yet been received. My idea has never been that the Corporation work should be at a standstill and in this view I directed verbally some of the Departments that approached me to-day, to carry on in the usual manner. The public should not be put into any difficulties. I wish to inform all the Departments in writing that the order has already been withdrawn by me as stated by me in the Corporation, so that any doubt that they may have may be set at rest. The work should proceed as usual and the powers and functions exercised in the normal manner in anticipation of proper sanction. No inconvenience should be caused to the public. Please circulate this amongst different departments.

(Sd.) J. C. MUKERJEA,
Chief Executive Officer.

LOCAL SELF GOVERNMENT AMENDMENT BILL

SECOND READING IN COUNCIL

The second reading of the Bengal Local Self-Government Amendment Bill, 1941, was concluded in the Bengal Council on Wednesday last.

The Bill seeks to provide for a special machinery for the decisions of disputes relating to elections held under the Bengal Local Self-Government Act and at the same time oust the jurisdiction of Civil Courts in respect of such disputes as has been done in Acts relating to the administration of Local Self-Government in the province.

The Bill further proposes that when enacted into law, its principles will apply to elections which have already been held and in respect of which disputes are pending in Civil Courts so that the new Boards to which elections have been made may come into existence and function without avoidable delay.

The House was adjourned for the third reading of the Bill.

The Beggar Problem In Calcutta

Mayor's Scheme For A Central Home For Vagrants

THE establishment of a receiving centre in the city from where vagrants, after examination by the medical officer may be distributed among the central vagrants' home proposed to be run somewhere on the outskirts of the city and the existing institutions dealing with the problem is recommended by the Mayor of Calcutta, Mr. A. R. Siddiqi and Dr. R. Ahmed, in their report on the financial implications of the draft Vagrancy Bill, now under consideration of the Calcutta Corporation.

They suggest that, to begin with the "Refuge", an institution for orphans and destitute may be utilized as the proposed receiving centre.

According to the last census, the approximate number of beggars and vagrants in the city was about 5,000. When the proposed Act comes into operation it may be expected that 25 per cent. of these will leave the city or be repatriated It may further be calculated that the able bodied among them would be absorbed in the labouring population of the city and in mills, docks, railways, the Corporation of Calcutta, Improvement Trust, and other employing agencies as also in domestic service.

This will leave, on a rough calculation, a balance of about 2,500 to be taken care of. About 2,000 of these may be distributed primarily among the five institutions namely, the Refuge, the National Medical Infirmary, the Cobra Leper Hospital, the Salvation Army and the Khadim-ul-Ensan Society and among any other agencies that may be found to be suitable. The balance of about 500 could be taken care of in the proposed Central Vagrants' Home. These 500 will it is contemplated, be those who are decrepit, old, infirm and generally incapable of doing any manual work. The problem thus resolves itself into making provision for 500 vagrants in the proposed home.

In giving an approximate estimate for a vagrants' home on the outskirts of the city for 500 beggars, they suggest the construction of five sheds and of an administrative block. These are estimated to cost Rs. 1,35,000 (land Rs. 50,000, buildings Rs. 80,000 and equipments, Rs. 5,000). Recurring expenses which will have to be incurred annually in this connexion, have been calculated to be Rs. 57,940 (salary of staff, Rs. 12,940 and medicines Rs. 45,000).

They also suggest that half the capital expenditure and half the recurring expenditure should be borne by the Government and the other half by the Calcutta Corporation.

It is pointed out that the institutions among whom vagrants will be distributed from the proposed receiving centre will have to be helped with money, which will not exceed Rs. 11,000, taking into calculation the money which will be collected through public charities and through the labours of capable vagrants. An annual grant of about Rs. 25,000 each by the Government and the Corporation, making in all a total of Rs. 50,000 should meet the requirements of the case admirably.

As regards the proposed board of guardians who will run the central home, the report suggests that the duty of the board would be to approach philanthropic and charitably inclined persons to help them in the work of relieving their city of its beggars and vagrants. Hindus and Moslems are accustomed to feed beggars on religious and other auspicious occasions. If there are no beggars to be fed, this form of charity should become a large source of income to the board.

AN OATH FOR OUR CITY FATHERS

"We believe in Our City, in the spirit of her institutions, and in the principles of freedom of thought, equality of opportunity, and sense of individual responsibility, for which she stands: and as an expression of our gratitude to those who have wrought to give us this priceless heritage, we pledge to these free institutions our allegiance and loyalty in times of peace as well as in hours of peril, and we will do all in our power to aid Our City to reach the goal visioned by our forebears."

An Advertising Opportunity

No more worthy motive could exist for publishing a weekly like "The Calcutta Municipal Gazette" than that it educates the public to greater civic consciousness.

That we have been successful, to a certain extent, is shown by the steadily increasing circulation, prestige and the advertising volume of "The Calcutta Municipal Gazette."

The Indian Municipalities buy hundreds of products in rather startling quantities. The "Gazette" represents an advertising opportunity for participation in the immense purchases made by them.

If you sell a product useful to Citizens, Municipal Councillors and Civic authorities, you will find here a market worth cultivating.

We suggest your including the "Gazette" in your next advertising programme.

MATTERS EDUCATIONAL

Education After Schooling

IN our ideas of education we have to steer clear of two dangers—on the one hand, of regarding indifference to economic considerations as the hall-mark of sound education and on the other, of regarding training for a job as in itself a sound education. For, the former tends to keep the system of education out of relation to the real needs of the individual and of society, while the latter is apt to aggravate the very problem which it seeks to solve. In India the relation between education and economic security has been consistently misunderstood in the past and the fact that employment depends far more on the needs of employers for particular kinds of ability than the possession of such ability by individuals has never been adequately appreciated. The reason for the serious and large-scale misunderstanding is not far to seek. The economic security of youth in countries like Britain, it was thought, was due to the nature of the training; the fact that by far the larger part of effective education in such countries was in response to the demand for particular kinds of training was altogether overlooked. And to-day when we have found that commercial education and technical training have failed, as, indeed, they were bound, to solve the problem of unemployment, we do not proceed to correct our erroneous ideas of the relation between training and security, but turn to altogether new notions of economic life and revive old blunders in new forms. The system of vocational education, which is the essence of the Wardha Scheme, is, indeed a repetition of the fallacious idea that the individual can be sure of making a living in the work for which he was trained in school. There is no assurance, and in the present conditions there cannot be any, that there will be an effective demand for the training so provided. The system of education in countries like Great Britain or the U. S. A. grew up not not only under the care of the great educationists from the universities, but also from the pressure of demand from the industries and from big business. The educational problem in India is rendered difficult by the absence of a similar pressure from the economic life of the country. On the other hand, our economic problem has complicated the educational problem by confronting us with the skeleton of unemployment from the national cupboard. There is no walk of life or kind of training in which a state of glut is not sure to be reached within a short time. And when the stem is so withered, all branches of higher education have necessarily a sickly growth.

The solution does not, therefore, lie either in a neglect of higher education or in taking vocational training from the plane of modern industry and business to the level of arts and crafts, but in realising that the system of education cannot by itself solve the problem of employment, unless it is aided by the deliberate economic policy of the State or by favourable economic forces of a natural kind. It is certainly within the power of the State to initiate a comprehensive economic policy and enable educationists to provide the necessary technical training in appropriate quality and quantity. But in the absence of natural economic forces, it is best for educationists not to complicate their tasks by directing their attention to obviously intractable parts of their whole problem. By confining their attention to those parts of the problem, which are under their control, they will neither render the task of the future more difficult nor affect the quality of the education they provide for.

The primary difficulty in all questions relating to education is that one is tempted to be too ambitious or too narrow-minded. The ambitious overlook the fact that the years spent at school and college are but a fraction of the life of the individual, that the building of the complete individual, is done, if at all, in middle age and that nothing is gained by entertaining exaggerated ideas of juvenile learning or training. The narrow-minded, on the other hand, do not realise that a few years of scholasticism or apprenticeship can do but very little for the comfort and happiness of the pupil. Education is best, when it is frankly regarded as but a beginning in fitting the individual for life, in the acquisition of the knowledge, faculties and qualities necessary for material competence, self-content and spiritual satisfaction. Thus there

---

PHOTOGRAPHS AND PLANS OF FACTORIES

Precautionary Measures Adopted

The desirability of taking all precautionary measures against the possibility of materials, such as photographs and plans of factories and installations passing into unauthorized hands, is stressed by the Government of Bengal in a circular letter to the various chambers of commerce in the city.

The letter states that for an enemy intending to carry out air attacks, much valuable information can be found in photographs, particularly, those taken from the air, blue prints of lay-out plans, large scale sketches, etc., and this material is frequently used in peace time by commercial undertakings for demonstration or advertising purposes.

It is considered that every installation of importance to the national war effort is a potential target for air attack, and effective steps should be taken to withhold from the enemy, or any potential enemy, information calculated to assist an attacking air-craft crew in finding its way to its target, in recognising it and in selecting its vulnerable parts.

are common points in the education of all, regardless of the differences in profession, calling or vocation or in the degress of attainment. At the start the budding poet and the scientific genius in the making, the factory hand and the village swain all have to be equally engrossed in the three R's. There is a minimum of lettered education which is common to all in the stages of primary and secondary education. There is, no doubt, deviation into many channels when the secondary school is neared or passed. The majority are unable any longer to neglect the call of economic life. Many fit into some hereditary calling or craft. A few pass into some technical institution or other. A large number pass into the portals of the university and disperse finally into the various professions and careers or into plain unemployment. We may leave the last mentioned out of consideration. But on the assumption that nobody suffers complete unemployment, we ought to recognise that the nature and purpose of education tend to regain the unity which they had at the start, when all alike were engrossed in the three R's. What reading and writing are to the little ones, the reading of newspapers and the listening-in to broadcasts are to the grown-ups. A strong civic sense, a capacity for amusement and enjoyment, love of drama, music, pictures, love of books according to each one's tastes and attainments, a capacity for appropriate unselfishness, for taking the long view, for the broader outlook, these again are common to all men and women who wish to invest life with some meaning.

Unless the scope of education is narrowed down to mere schooling between the ages of five and twenty, a system of national education must meet the educational needs of all individuals at all stages of life. It is because the Education Minister cares little for the mental development of the grown-ups, overlooks the educational value of leisure and of amusement or entertainment, exposes the mind of the average citizen to all the obnoxious influences of sinister demagogy or unscrupulous commercial publicity that political life is sickening and democracy well-nigh impossible. To neglect the education of grown-ups by failing to provide the average citizen the facilities and the incentives for mental development in adult life, is to open the flood-gates of interested propaganda. The library movement, the radio, television programme, popular lectures, university extension, insistence on the limitation of working hours, all these are the legitimate concern of the educational authorities.

The more advanced countries of the West have all the equipment necessary for the continuance of education through adult life and middle age. But the facilities for such education are provided as amenities on a commercial basis, and in obedience to the motive of private profit. There is no conscious or deliberate educational purpose behind them; they become, therefore, the instruments either of propaganda or of flippant amusement. And yet propaganda and amusement are only the debasement of the two main modes of education in adult life or middle age. Propaganda is the means of training people to think, though only on predetermined lines. And the aim of amusement is to develop and satisfy the capacity for enjoyment and happiness. If education could follow the methods of propaganda and of amusement and avoid the dangers of uniformity and flippancy, every citizen would become a cultured individual and the task of educating the people would become progressively lighter. For, the worst handicap in the education of juveniles is the environment of elders with little education and crude minds and harmful propensities. And the best schemes of national education in India are bound to fail in the absence of efforts to improve this environment of elders.

In the West, the importance of checking propaganda and refining amusement is now widely recognised. But here in India, we have to institute and organise these modes of adult education. That is necessary not only from the cultural point of view, but also from the economic standpoint. If education is not to founder on the rocks of unemployment and economic chaos, the productive efficiency of the people and the rationalisation of agriculture and other basic industries have to be accomplished in the shortest time possible. It is inconceivable that these tasks can be accomplished without pressing the cinema and the radio into the service of the nation. The Government of the future is bound to do it. But much more will be gained, if the educational significance and purpose of this work are frankly recognised from the start and expert educationists are asked to take a hand in it.

But the point we seek to emphasise is that the diversity of aptitude, knowledge and training required for the various vocations and professions should not be allowed to obscure the fundamental identity of equipment which all men and women require to secure individual happiness and social progress. The content of primary education, learning in the middle and secondary schools, a minimum of knowledge of physical and social sciences, in early years, and in the later, interest in public affairs, discrimination, capacity to resist interested propaganda, capacity for reflection and enjoyment, these are common to all. In other words, though individuals may branch out into varied callings and different professions, the roots of primary education, the sap that flows all through, the beauty of the foliage and the colour and fragrance of the flowers at the top, these are common to all the branches. That, we believe, expresses the fundamental unity and essential identity of the aim and purpose of education; and obsessions about economic security which rests far more on others than on the educational authorities, can only deflect and debase education. To vary the familiar saying about not seeing the wood for the trees, one might, in regard to the problem of education, fail to see tree for the branches.

C. S. P. C. A.

Premier's Tribute

A tribute to the good work being done by the Calcutta Society for the Prevention of Cruelty to Animals was paid by the Premier, Mr. A. K. Fazlul Huq, in the Bengal Legislative Assembly on Thursday, when replying on a debate on the working of the Society.

The debate was raised on a cut motion in respect of the Budget demand for Rs. 7,19,000 for the Veterinary Department.

General Article

Beggar Problem And The Vagrancy Bill

[By Dr. A. C. Ukil, M.B.]

BEGGING is one of the most ancient professions in the world. Martin Luther's "Book of Vagabonds and Beggars" (1529), gives a vivid description of the various types of beggars in Europe in the 14th Century. Lepers and persons suffering from loathsome diseases, the maimed and the blind, including healthy persons who could successfully simulate these physical defects, evoked the sympathy of charitably disposed people. The abuse continued in Europe until economic and educational progress was sufficiently advanced and the operation of the Poor Laws and organised charity could be mobilised to check the evil. A succession of Acts passed between 1601 and 1930, have practically controlled the problem in England.

In India, religious mendicants have been entitled to the generosity of wide-hearted householders from very ancient times. Big centres of population and religious fairs and festivals attracted them in large numbers. Professional beggars, who take advantage of their physical disabilities, real or faked, are attracted to the large and rich population of these centres to ply their trade. The growth of transport facilities and the slackness of the authorities (it is stated that over 3,000,000 ticketless passengers utilised the railways for travel in the year 1939-40,) have accelerated the movement of such population from one place to another and from one province to another. These shrewd beggars play on the kind sentiments of our Indian population, who have not yet sufficiently appreciated the benefits of organised charity, and thus thrive unmolested in every locality, in the absence of suitable legal and institutional measures undertaken to check the evil. What is reprehensible is that beggar *Sirdars* in towns exploit the physical disabilities of beggars and their children to carry on commercialised begging. It is believed that private charitable endowments for feeding the poor in Calcutta represent an annual expenditure of Rs. 3 to 4 lakhs, without hardly any arrangements for organised relief on a planned basis.

Beggars are members of our society but are seldom owned by it as such. The sight of a homeless wandering beggar, however dismal, often moves us to pity but we have become so inured to their ways of life that it seldom occurs to us to improve or enquire into their lot. When we find them obstructing the roads and foot-paths and when they molest the passers-by, we send at most a letter to the newspapers and resign ourselves to our inert condition. We do not stop to think that professional beggary involves not only problems connected with public health, such as the dissemination of infection by beggars suffering from leprosy and other contagious diseases particularly when they move about freely in thickly populated parts of the town, use public latrines and water taps and foul the foot-paths of the important thoroughfare, but also those connected with the care of the blind, the paralytic, the infirm and the insane, the deaf and the dumb. We do not look back to think that the continuance of the evil not only degrades the able-bodied beggars but it propagates the evil to the new generation, for it must not be forgotten that one-third of the total number of beggars in Calcutta have been born and brought up in this city and are thus entitled to claim as much civic privilege and attention as any of us. The appointment of the Pickford Mendicant Committee by the Government of Bengal in 1920, was the first indication of the desire of the citizens of Calcutta to remove the blot, but years rolled on and nothing was done.

The Rotary Club of Calcutta took up the question in 1934, and studied the problem in all its aspects. They estimated that, of a probable population of 4,000 beggars in Calcutta, 25 per cent. were lepers, 10 per cent. blind, 5 per cent. paralytic, 5 per cent. suffering from miscellaneous diseases and 5 per cent. included the insane, deaf and dumb. Half the beggar population were found to be able-bodied. Only one-third (or roughly 1,500) of the beggar population belonged to Bengal, the rest came from other provinces. The number of females was half of that of males.

The problem was first discussed at a Conference of the citizens of Calcutta presided over by the then Mayor of Calcutta, on the 6th February, 1935, or a little over six years from now. A number of voluntary institutions offered to undertake the care of different categories of beggars—diseased, infirm and able-bodied and males, females and children—which considerably lightened the capital and recurring expenditure involved in the scheme. It was suggested that leprous beggars might be sent to a leper colony, diseased and infirm beggars to a hospital and infirmary, child beggars (who should be segregated from adults) to a school and able-bodied beggars to an industrial centre, after being first sorted out at a Receiving Centre.

It may be pointed out that attempts to solve a portion of the problem will not help to solve it at all. The public health portion of the menace will perhaps be relieved if all the beggars suffering from contagious diseases are removed from the streets. Although this is the most urgent relief in order of precedence, the removal of the paralytic, the insane, the invalid and the deaf and dumb is no less important. Unless the children of the professional beggars are removed from their baneful environment, the perpetuation of a successive generation

SMALL-POX IN CALCUTTA:
HAVE YOU TAKEN THE "SAFETY" MARK?

of beggars will not be prevented. It will thus be seen that all parts of the scheme are more or less inter-linked with each other and that efforts to solve a part of the ploblem, instead of the whole, will be fraught with possibilities of failure.

The total cost of the scheme was estimated to be Rs. 100,000 for capital (construction and equipment) and Rs. 100,000 for annual recurring expenditure (food, clothing and medical charges)—a modest figure considering the magnitude and complexities of the problem. This expenditure is likely to be reduced to a lower figure when the expected charitable endowments are forthcoming. To obtain the necessary funds for adequately financing the scheme, the Calcutta Corporation at one time suggested, to which some of the Chambers of Commerce agreed, the levying of a 12½ per cent. tax on trade licenses and a small charge on application for the sanction of building plans. This proposal is worthy of consideration and may be further explored.

After working out the problems of accommodation and care of vagrants, it was found out that existing legal machinery would not be able to meet the situation and that suitable legislative changes were needed to effectively cope with the evil. With the help of eminent jurists, leaders of Assembly groups and administrators, a Vagrancy Act was, therefore, drafted. The legal proposals mainly related to investing the Police with special powers to arrest and place the beggars before a Magistrate who could compel them to be sent to an appropriate institution; the punishment of vagrants for disobeying rules; the punishment of the employers of child beggars; the repatriation of extra-territorial beggars and the arrest and deportation of persons found to live on the earnings of a beggar or beggars. It was expected that, once the laws were enforced, those making a living out of the beggar's proceeds would give up their habit and that many able-bodied beggars would seek regular employment. It was realised that the law must include the restriction of the immigration of vagrants into the local area from outside, otherwise as soon as one set of beggars was dealt with another would pour into the town, particularly in times of failure of crops or famine. It was also realised that the law should provide for the appointment of a Board of Guardians and for the institution and management of a fund, out of contributions from taxes, private donors, statutory bodies and Government, for carrying out the purposes of the Act. The draft Act has been revised twice by the Rotary Club and thrice by the Calcutta Corporation and I am glad to say that, in its present form as modified by the successive Beggar Problem Sub-Committees of the Calcutta Corporation, is a satisfactory piece of legislation admitting of application within the budgetary capacity of the Calcutta Corporation and the Government. The Calcutta Corporation, I am glad to find, is agreeable to contribute not only half the capital and recurring expenditure of the scheme but also to run a Vagrants Home for 500 beggars in the outskirts of the city, with appropriate contributions from the Government. The Government must, however, agree to run the machinery indicated in the Act and to bear the cost of repatriation of extra-territorial beggars.

The Corporation of Calcutta approves of the scheme proposed in the Vagrancy Act, as amended by its Beggar Problem Sub-Commitee and is prepared to undertake proportionate financial liability with the Government, but it rightly feels that "legislation for setting up proper machinery for dealing with this class of population and for providing stringent measures for the repatriation of at least those who do not belong to the Province must go hand in hand with provision of accommodation." The general consensus of opinion at all the conferences and committees on the subject is that *the Bill should be introduced as a Government measure*.

In order to draw the attention of the Government to the necessity of taking up the Bill at an early date following steps were taken: (1) A deputation waited on His Excellency Sir John Anderson, the then Governor of Bengal, on the 14th January, 1936, when His Excellency complimented the members on the businesslike manner in which the proposals were drafted, wrote a Foreward to the brochure on the subject published by the Rotary Club of Calcutta and assured the deputationists that early steps would be taken in the matter. The Government of Bengal forwarded the scheme to the Corporation of Calcutta in February, 1937. Since then the Calcutta Corporation has formulated definite proposals and has intimated the Government about the necessity of introducing the Bill as a condition precedent to putting the scheme into effect. (2) copies of the above brochure were circulated to all members of the Legislative Assembly. (3) Several joint Conferences of the leaders of Assembly groups, Chambers of Commerce, representatives of the Calcutta Corporation and representatives of the charitable institutions who are prepared to co-operate with the scheme have been held. (4) A sustained Press publicity has been carried out as a result of which there is now a general desire in the community to see the evil removed, and lastly (5) several deputations of representatives of the Rotary Club, Chambers of Commerce and Assembly members have waited on the Hon'ble Ministers concerned, the last being on the 28th August, 1939, apparently without success.

The various charitable institutions such as the Refuge at Bowbazar, the National Infirmary at Manicktola, the Gobra Leper Hospital, the Salvation Army, the Khadem-ul-Ensan Society and the Vagrants' Home proposed to be started by the Calcutta Corporation, under the guidance of the Board of Guardians contemplated in the scheme have all offered to co-operate with the scheme in taking charge of the entire local beggar population in these institutions. It seems, therefore, that no further progress is possible unless the Government introduces the Bill and thereby earns the gratitude of the citizens by removing this civic blot from the premier city in India.

VACCINATION NEVER KILLED A MAN
SMALL-POX HAS KILLED MILLIONS

The All-India character of the evil was pointed out by the 2nd All-India Local Self-Government Conference held at Calcutta on the 29th December, 1939, which emphasized the need for legislation on an All-India basis. It is believed that when Bengal had shown the way, other provinces which are already alive to the necessity of checking the evil, would come forward to co-operate in bringing forward a comprehensive piece of central legislation. This, however, should not deter the Bengal Government in proceeding with the proposed Vagrancy Act, as success is bound to ensue, as has been demonstrated in the case of the Goonda Act and like measures.

We do not anticipate any adverse criticism of the Vagrancy Act from religious bodies. The Pickford Committee, which met twenty one years ago, thought that both Moslem and Hindu religious opinions were generally sympathetic towards the proposed legislation. The Rotary Club of Calcutta has recently tried to ascertain the present position in this matter. From enquiries made, it appears that the religious divines of both communities are prepared to lend their support to the proposed legislation.

Along with these measures, a good deal of *educative work* will have to be undertaken to induce the average citizen to satisfy his generous instincts to relieve the sufferings of the beggars by placing his contributions in the hands of the Committee of Management or Board of Guardians, which undertakes to deliver organised charity on his behalf. If this is done, it is anticipated that the necessary funds for the consolidation and expansion of the co-operative institutions will be forthcoming. The Rotary Club, I venture to suggest, will have to undertake this task of education in co-operation with other organisations even when the law is enacted and the various institutions are established. It may be hoped that with the law in force and a better training of the public mind, there will be a progressive diminution of vagrancy in the community.

The Honorary Secretary of the Rotary Club in his Bulletin for the last week, has described the Rotary Club's efforts, in solving the Beggar Problem in Calcutta as its baby. He thinks that the baby, in the absence of the Vagrancy Bill, is suffering from "infantile paralysis" and that it can only be resuscitated by applying the "iron lung" of legislation. I can tell him that the apparatus is in the hands of Rotarian Nawab Bahadur of Dacca (who holds the appropriate portfolio in the Ministry) and that unless the apparatus is made available the baby may die. May I, therefore, on behalf of the Rotary Club and the citizens of Calcutta, appeal to the Bengal Ministry to pilot the Bill at an early date in the interests of Calcutta's civic life and thereby earn the gratitude of its citizens?*

ALL-INDIA MEDICAL REGISTER

Dr. B. C. Roy's Proposal

The provision of an All India Medical Register was among the proposals referred to by Dr B. C Roy in his presidential address at the meeting of the Medical Council of India on March 21 He said this was one of the three proposals of the Council forwarded to the Government of India, from whom, however, no intimation had been received as to their views

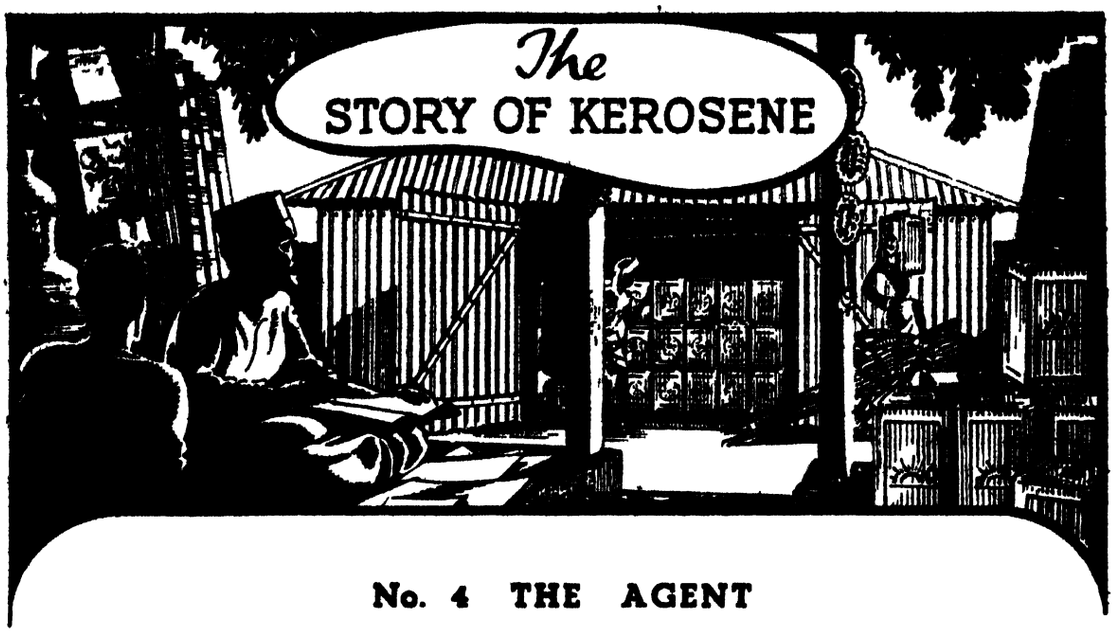
The first of the three proposals was the Council's resolution to discontinue the system of indirect reciprocity, that is to say, reciprocal recognition of medical degrees of other countries through the General Medical Council.

Secondly, the Council recommended to the Government to set up a reciprocity board for the purpose of facilitating reciprocity between India and various countries comprising the British Commonwealth of Nations, as also for the purpose of removing by mutual discussion any difficulties in the way of establishing reciprocity with these countries and maintaining the same once it was established

Thirdly, the Council agreed to recommend to the Government to alter the Act in order to provide for an all-India medical register on which names of all persons who held qualifications mentioned in schedule I to the Act, and of those who were on the provincial medical registers up to a certain date, would be included: and in order to ensure a uniform standard of medical education registrable by the Indian Medical Council, the Council also recommended that the Central Government should ask the provincial Governments either to abolish medical schools for licentiates or raise them to the university standard.

Dr. Roy said that the Burma Government had intimated their decision not to enter into any scheme of reciprocity with India except through the General Medical Council. The executive committee had taken up the matter to ascertain India's constitutional position with regard to this decision.

The Council accepted the resolution of the executive committee regarding the retrospective recognition of the Andhra and Patna medical degrees.



The next meeting of the Council will be held on December 28, 1941, at New Delhi.

No. 4 THE AGENT

Probably the most important link in the chain of Kerosene distribution is the Agent. He is responsible for distribution throughout the area that he covers. It is an essential part of his duties to ensure that every dealer in his district is regularly supplied and where necessary he must arrange for hawkers and bottle wallahs. Burmah-Shell Kerosene Agents are merchants of high standing and they are respected throughout India for the valuable part they play in the life of the community.

Through their own staff of Inspectors, Burmah-Shell keep watch to ensure that all the links in the chain of distribution—which starts at the Company's Installation and ends in 600,000 villages—are functioning with efficiency.

Small-Pox In The United States

By
DR. MORRIS FISHBEIN
EDITOR
"Journal Of The American Medical Association"
AND OF
"Hygiea": The Health Magazine

IN those States in which there are laws requiring vaccination of all children before they go to school, small-pox has practically disappeared. In contrast, there continues to be small-pox wherever the laws do not make vaccination compulsory. There are 18 States which have a population of more than 42,000,000 people in which vaccination is compulsory. In these States there are about 280 cases of small-pox every year; that means one case of small-pox for every 200,000 people.

In 14 States each town or local community can decide for itself whether or not there should be compulsory vaccination. In these 14 States there is a population of about 88,000,000 people but they have 1,292 cases of small-pox each year, about seven cases for every 200,000 people.

Finally, there are 22 States in which vaccination is not compulsory in any form. In these States there are 44,000,000 people who have about 6,048 cases of small-pox every year, which makes about 28 cases for every 200,000 people.

Certainly these figures should be sufficient to indicate that vaccination against small-pox does protect and that if there is any single procedure in modern medicine that ought to be compulsory for everyone, it is vaccination against small-pox. The health record of the United States is not a good one as far as regards this one disease. We have with Russia the unenviable distinction of having more small-pox than any other country in the world, unless it be India. Fortunately, there has been a progressive change in the type of small-pox that is seen in the United States, a change from a large proportion of severe cases with a relatively large number of deaths to a greater proportion of mild cases with few deaths.

In the Eastern part of the United States, small-pox seems practically to have vanished because it is in this portion of the United States that the laws have enforced vaccination and given to the people adequate protection. Most of the cases reported in the past ten years have occurred in the North Central and North-Western sections of the country.

A comparison just made of the twenty-year period from 1900—1920 with the period from 1920—1940 indicates a drop from 750,000 cases in the first twenty-year period to 700,000 cases in the second twenty-year period. However, 75 per cent. of the cases which occurred in the period from 1920—1940 occurred during the first ten years. Moreover, the number of deaths dropped from 11,435 in the period from 1900—1920 to 5,337 in the period from 1920—1940. Of these deaths 90 per cent. occurred in the period from 1920-30.

These figures are even further testimony to the usefulness of intensive vaccination against small-pox because the effects of compulsory vaccination will be felt increasingly as more and more States realize the importance of widespread vaccination of all of the people.

Farming With Sewage

War-Time Work For Food Growing

[By Eric Hardy, F.Z.S.]

THE war-time need to grow more food finds an economical use for sewage in those sewage-farming methods which in recent years had come to be looked upon as "old fashioned." The sewage farms will play an important part in the agricultural policy. In the post-war years the tendency of British agriculture was to neglect corn and arable farming, and turn the land more and more to grass for dairy and poultry farming, in neither of which capacities was the sewage farm at all suited to compete with the ordinary farms. Now that dairy farming and stock-raising has seen a setback to make room for the more urgent expansion of corn growing and the cultivation of roots and greens to replace former imports, the sewage farm can again figure as more than a makeshift adoption. Sprinklers and settling tanks, for all their peace-time advantages are dangerously vulnerable to air damage in a congested, built-up area. Serious consequences might follow immediately upon the destruction of a modern sewage farm by aerial bombs unless sufficient land were available for use as settling and filter pools.

The main war-time value of sewage farming is to produce formerly imported animal foods like oats, and greens, potatoes, and roots for human consumption. Oblivious of any danger of spring and summer drought, and of a great deal of the cost of manure, it is, nevertheless, faced with a greater problem in weed control. Persicaria, or "redweed." chickweed, and mayweed are amongst the crop weeds rapidly increased where sewage is utilised.

Sewage sludge from the sedimentation tanks may be ploughed into agricultural land as a more useful purpose than conveying it out to sea in specially constructed ships to dispose of it. If this sludge is enclosed in jute canvas and compressed into solid cakes, the latter may be transported for manure any distance. There is a shortage of organic manure for both farm and garden, and the reduction in stock necessitated by the war-time corn growing will further aggravate this shortage. No sewage sludge that can be used for manure should therefore be wasted. The clarified liquid from the tanks may also be used, but it lacks much of the value of the sludge.

Even in its simplest, sewage farming may consist of nothing more than allowing crude sewage to run out on to a field, banked around the sides, percolating through into the brooks, and rivers, and later ploughing into the soil the deposits. A large area may thus be worked in rotation, and it should be remembered that owing to the large proportion of vegetable matter in the human diet, sewage of human origin is particularly rich in its

manurial value. A frequent method of cultivating root crops on sewage farms is to lay out long rows of ridges separated by furrows into which the sewage flows. The seedlings or young greens or roots are first transplanted into the ridges and then, when they are established, the sewage percolates through to their roots. This is very suitable in spring and summer when root crops tend to dry out on certain soils.

Quick-growing green fodder, comfrey, rye grass, peppermint, cabbage, kohl-rabi beet, mangold-wurzels, and carrots are generally amongst the most successful crops for sewage land. But all market-garden produce does well, and if the land is not heavily dosed potatoes and oats, brussels sprouts, caulies, beetroot, and celery will benefit. The nature of the local soil has some effect, but sewage filtering tends to lighten the soil. Where the soil is on the sour side, Kerrs Pink and Great Scott potatoes are generally a good choice, and an early crop can be followed with cabbages. For heavy crops of oats on resting old sewage beds, such varieties as Victory, Goldfinder, and Abundance have been favoured, and on peaty soils, Marvellous.

Disc harrowing in autumn is generally a necessity after lifting crops, in order to destroy weed growths, and then the material is ploughed in for green manure before it runs to seed. Potatoes are a good crop with which to follow a corn crop, or they may follow "seeds" or old grass, but resting land for potatoes should be ploughed deeply in autumn and cross-ploughed if possible in early spring. A policy is to plough lightly the second time and plant the sets in every second or third furrow.

Mangolds require drier and warmer conditions than most crops—hence their popularity in the Midlands and the South—but I have seen them do well on fields under which rubbish has been buried in the modern method of disposing of Corporation rubbish by burial instead of the usual tip. They are suitable for following a corn crop in a district that may be described as warm and sunny.

Celery is a crop especially benefited by sewage manure, if not too liberal, and it should yield well if grown on the ridge cultivation system mentioned with cabbages and greens. In fact, any green crop does extra well where sewage can be applied during the growing period. An extra crop can often be got in over ordinary farming results, and in hot summers there is the benefit of the sun without the shortage of water.

Counteracting the trouble of weed surplus on sewage farms is the fact that land with sewage is considerably more populated than usual with useful birds. Starlings, lapwings, pipits, wagtails, gulls, snipe and redshanks are considerably increased, and they reduce the cutworms and other insects in the soil, as well as the worms. The abundance of weeds should, however, be reduced, as these form secondary host plants for most of the green-fly or aphides (blights), whose winged and wingless stages are spent on two different plant hosts, while some of the flea-beetles and other seedling pests use charlock and other weeds as a wintering or resting plant between crops. "Dirty" land is a danger in sewage farming, and it is dirty land which encourages most insect pests.

The best sewage farm soil is 12 in. to 15 in. of fine, porous soil, with a porous subsoil; sandy, clay, peat, and chalk soils are generally unsuitable for sewage farming. Sewage carrying a large quantity of suspended matter should be twice used, first turned out on to arable land, banked all the way round, and then drained from that on to pasture at a lower level; but the effect on pastures is generally to make the coarser grasses predominate over the finer fescues. In any case, only a fifth of an irrigation farm or a third of a filtration farm should be treated with sewage at any one time, the remainder resting. After carrying sewage, a field should be rested and dressed with lime, and preferably be cropped before sewage is again run into it. The fields will also require a good system of artificial drainage under the soil. Very fine, sandy soils to a greater depth than a couple of feet generally clog. There should be plenty of vegetable manure or "humus"—obtained by ploughing in weeds as green manure—in the sewage farm soil as this encourages the bacteria which complete the putrefaction of the sewage. The amount of sewage a field can carry depends upon the nature of the soil. Clay soils are not very porous in wet weather and they crack in dry, summer weather; peat is too spongy, and chalk not only cracks, but is too soluble in carbon dioxide.

A sandy loam, overlying sand and gravel, used for the filtration method and carrying crops can receive 12,000 gallons of settled sewage per acre, and with little cropping 25,000 gallons. Under-surface irrigation with crops it will take only 7,000 gallons. A heavy soil overlying clay and under surface irrigation with crops will take 5,000 gallons per acre; but a stiff clay soil overlying denser clay under such conditions takes only 3,000 gallons.

CALCUTTA MUNICIPAL CONTRACTORS' ASSOCIATION

OFFICE BEARERS ELECTED FOR 1941-42

The first general meeting of the Calcutta Municipal Contractors' Association was held at 18-1, Sahitya Parishad Street on the 29th March, 1941, under the Presidentship of Mr Dharani Dhar Koyal.

A set of constitution and rules were framed for the session, and the following office bearers and the members of the Executive Committee were elected :—

President : Mr. K H. Bose. Vice-Presidents :—Mr. Dharani Dhar Koyal, Mr Kanailal Sett, Mr. Ramesh Chandra Roy, Mr. Manindra Nath Bose, Mr. Hrishikesh Mukherjee, Mr. Kalu Datta, Mr. M Sabir Hossain, Mr Dwijendralal Misra. General Secretary :—Mr. Sunil Kumar Banerjee Assistant Secretaries :— Mr Barun Iralal Bose, and Mr. Santosh Chandra Bhattacharjee. Treasurer :—Mr. Manindra Mohan Mitter. Members of the Executive Committee :—Mr. Nagendra Nath Dutt, Mr. Nirendra Kumar Bose, Mr. Gopal Das Sen, Mr. Gopi Mohan Ghosh, Mr. B. Mitter, Mr. Srihari Bose, Mr B. N. Mukherjee, Mr. Birendra Nath Bose, Mr. Ganapati Chatterjee, Mr H N. Roy, Mr Panchu Gopal Chakravartty, Mr. Radha Ranjan Bose, Mr. Santosh Kumar Mitter, Mr. B. K. Biswas and Sk. Ashgar Ali.

CALCUTTA NEWS & VIEWS A Digest

"BASUMATI TELEGRAM"

Mr. Sashi Bhusan Dutt deposited a security of Rs. 1,000 with the Chief Presidency Magistrate of Calcutta and was declared as the printer and publisher of *Basumati Telegram*, a Bengali daily, on Thursday.

Mr. Hemendra Prasad Ghosh will edit the paper.

ALL-INDIA INSTITUTE OF HYGIENE

Dr. John B. Grant, Director of the All-India Institute of Hygiene, will proceed to America on leave very shortly.

Dr. R. B. Lal, Professor of Epidemiology of the Institute, will officiate as Director in the absence of Dr. Grant.

COUNCILLOR IN MOTOR ACCIDENT

Councillor Debjiban Banerjee received slight injuries as a result of a collision between his car and a lorry on the Barrackpore Trunk Road on Saturday afternoon. He had been advised complete rest by his attending physicians

THE GOVERNOR

His Excellency the Governor of Bengal, it is stated, intends to maintain the closest possible touch, during the summer months with those Departments of Government which will not move to Darjeeling. It is understood that part of the official residence will be kept open as His Excellency intends to spend at least a portion of each month in Calcutta.

The summer exodus of the Government of Bengal to Darjeeling extends from the first week of April to the first week of July.

ONE-WAY TRAFFIC AT DALHOUSIE SQUARE

One-way traffic in a clock-wise direction will be introduced around Dalhousie Square from April 15.

A note issued by the Commissioner of Police in announcing the new scheme states that owing to the increased volume of traffic in the business area and as new roads are being made to the new Howrah Bridge, all of which radiate from St. Andrews Church, it has been decided to experiment with one-way traffic in a clock-wise direction around Dalhousie Square.

CALCUTTA HEALTH WEEK COMMITTEE

At a meeting of the Working Committee of the Calcutta Health Week held at 5, Government Place on March 28, Lady Sinha was elected President, and Sir Thomas Elderton, Sir Badridas Goenka, Sir Hari Sanker Paul, Mr. A. R. Siddiqi, Mr. N. R. Sarker, Khan Bahadur A. Momin and Lt.-Col. A. C. Chatterji, Vice-Presidents for 1941.

It was decided to continue the beneficent work the Committee, chiefly the Cleaner Calcutta section, was doing. Rai Bahadur P. N. Mukherjee undertook to be chairman of this section.

It was also decided to ask various public bodies to send their representatives to the working committee of the Health Week.

BENGAL VETERINARY COLLEGE

A suggestion that the Bengal Veterinary College should be affiliated to Calcutta University leading to the Degree of B.Sc., (Vet.) was made by Rai Bahadur A. N. Das, presiding at the annual prize distribution of the College.

The Rai Bahadur congratulated Mr. A. D. MacGregor, the Principal of the College, on the remarkable progress the institution has made under his guidance.

Mr. Das expressed satisfaction at the fact that the problem of hostel accommodation had to a certain extent been solved by the Government giving permission to first-year students to reside outside the college premises. He acknowledged the indebtedness of the managing committee to the Government for having sanctioned additional teaching staff and the establishment of a model dairy which, he believed, would have an important effect on the problem of pure milk supply in the city, and concluded by giving some useful advice to the students.

PREMIER ON PRIMARY EDUCATION

The Education Minister, Mr. A. K. Fazlul Huq, made a short statement on Monday last in the Bengal Council about the action taken by Government on the resolution regarding additional provision of one crore of rupees for the expansion and improvement of primary education in Bengal that was passed by the House on August 30 last.

The Education Minister said: Government are unable to accept the resolution in toto on the ground that there are practical difficulties in the way of accepting it as it stands.

"The problem of primary education is not merely a question of provision of funds but the question of the supply of trained teachers as well. At present there are a little over 80,000 traind teachers only. The existing training schools (including 32 centres) turn out annually a little over 3,000 trained teachers and with the opening of new training centres the number can be raised at best to 6,000 or 7,000 per annum; whereas for the successful solution of the problem of primary education of Bengal, Government require about 1,48,000 trained teachers. Money spent on untrained teachers will be sheer waste.

"The resolution," he went on to say, "has however been partially implemented by Government by agreeing to additional provision of Rs. 35,00,000 recurring for primary education and of over Rs. 18,00,000 non-recurring for the training of teachers for primary schools."

CIVIC NEWS FROM FAR AND NEAR

PABNA MUNICIPALITY

Out of 9 seats contested by the Pabna Hindu Mahasabha in the Municipal election, six of their candidates have been returned, the official (*Ad-Hoc*) Congress capturing two and one being independent.

ELECTED AGAIN

The Tanjore Municipal Council at a meeting re-elected Mr. K. Natarajan as Chairman of the Municipality. Mr. Natarajan is at present undergoing a term of imprisonment in connection with Satyagraha.

A. R. P. IN MADRAS

The Government have asked the Madras Corporation to prepare immediately a scheme, in consultation with the Special A. R. P. Officer for the protection of public utility undertakings in the city and also an estimate of its cost.

BOMBAY'S NEW MAYOR

Dr. J. A. Collaco was elected Mayor of Bombay on Thursday last in succession to Mr. Mathuradas Tricumjee whose term of office expired to day.

The rival candidate Dr. J. Alban D'Souza secured forty-one votes while Dr. Collaco got forty-four votes.

DACCA BUDGET

The Budget Meeting of the Dacca Municipality was held on Thursday last. In the absence of the Chairman, the Vice-Chairman, Khan Saheb A. H. Ahmed, took the chair.

In view of the communal situation in the town, the meeting tentatively adopted the budget and postponed discussion till conditions in the town are normal.

BERHAMPORE WATER WORKS

Work in connexion with the relaying of the steel mains of the Berhampore Water Works which had been considerably damaged, will be taken in hand shortly in view of a communication from the Government which informed the Berhampore Municipality that arrangements had been made with the Indian Stores Department for supply of the material.

The Government sanctioned a loan of Rs. 80,000 to the municipality for the work and the balance of the cost, Rs. 56,000, will be met from municipal funds.

MATERNITY HOSPITAL FOR TANGAIL

With a view to founding a maternity hospital, Sir Abdul Halim Ghuznavi has acquired the property of the Australian Baptist Mission at Tangail covering an area of 24 *bighas*. The deed of conveyance was executed on February 27 by the Rev. W. G. Crofts, Secretary of the Field Council of the Mission.

The hospital, which will have all the modern equipments, will be named "The Karimunnesa Maternity Hospital" to perpetuate the memory of Sir Abdul Halim's mother.

The foundation stone will, it is understood, be laid in June. For the present, 18 beds will be provided of which 12 will be free and six paying.

TURNED DOWN

The proposal of the Madras Corporation to levy a special tax on petrol depots and warehouses storing inflammable materials, etc., for raising a fund to enlarge the fire-fighting fleet, has been turned down by the Government.

The Government express the opinion that the Corporation should find from the existing resources the necessary funds for the purpose without the levy of a special tax. They also state that it is the duty of the Corporation to maintain a fire-fighting fleet with up-to-date equipment for the safety of a large and populous city like Madras.

CHOLERA IN CALCUTTA

Attacks And Deaths: Ward By Ward

NO KHADI

Khadi supply to the employees of the Madras Corporation is to be discontinued as the result of a resolution adopted by the City Council. In its place mill cloth is to be supplied. The resolution was adopted by 18 votes against 11.

Mr. C. Basudev, the Mayor, has issued a note in this connection saying that "Khadi has been found to be not only uneconomical, but unsuitable

for rough wear and that the Corporation peons and other employees have objected to the compulsory use of this unsuitable cloth."

The City Council also refused to sanction the contribution for teaching Hindi in Corporation schools.

HOWRAH DISTRICT BOARD

The question of delimitation of constituencies and reservation of seats for direct election was discussed at a meeting of the Howrah District Board, Mr. M. N. Roy, the Chairman, presided.

The Chairman said that the Board had recommended to the Local Government to raise the number of seats from 18 to 24, 18 of which would be open to election while the other six members would be nominated. The Board had further submitted a proposal to reserve four seats for Moslems. The Government, while refusing to increase the number of seats to 24, agreed to raise the total to 20, of which 15 would be elective and five nominated.

The Government had desired the Divisional Commissioner at Chinsurah to submit a revised proposal on the basis of 15 elective seats. The Board accepted the Commissioner's recommendations with certain modifications

SERAJGANJ SUPERSEDED

The Government of Bengal has superseded the Commissioners of the Serajganj Municipality, Pabna district, for two years from April 1, 1941.

A Government resolution, published in an Extraordinary issue of the *Calcutta Gazette* yesterday evening states that the maladministration in the municipality has been under the notice of Government for some years past. After a careful consideration of the situation, the Government have come to the conclusion that the Commissioners of the Serajganj Municipality have shown inability to perform, and have persistently made default in the performance of the duties imposed on them.

The Sub-divisional Officer of Serajganj is to exercise and perform, in addition to his own duties all the powers and duties exercised and performed by the Chairman and Commissioners of the Municipality.

SOUTH SUBURBAN MUNICIPALITY

The Budget Estimates for the year 1941-42 of the South Suburban Municipality were presented by Mr. Biren Roy, Chairman, at a meeting of the Municipal Commissioners. The incidence of taxation per head of population still remains less than Rs. 31 the lowest figure in the suburb of Calcutta with practically all the amenities *i.e.*, Electric lights, filtered water, gas, bus and Tramways services. The estimated total receipt for the coming year is Rs. 1,82,080 and the expenditure is Rs. 1,70,060 leaving a closing balance, Rs. 12,020 only. The expenditure for Public Instructions has been put at Rs. 18,821 and that of Health and Medical Services at Rs. 16,032. The Municipality hopes that by the next year five more Free Primary Schools will be opened and all the existing 18 Free Primary Schools will have their own premises.

The Maternity Scheme is expected to be started this year as also Anti-Malarial Work in the area adjoining Calcutta boundary on the north-east and on the north-west.

The Public Health Re-Organisation Scheme will be introduced in the Municipal area which provides for the appointment of two Health Officers and four Sanitary Inspectors with equal number of assistants.

SIR NRIPENDRA NATH SIRCAR

INAUGURATING THE ACHARYA PRAFULLA JAYANTI EXHIBITION AT THE CORPORATION COMMERCIAL MUSEUM.

Letters TO THE EDITOR

Notice to Correspondents

All contributions and correspondence should be addressed to the Editor, "Calcutta Municipal Gazette," Central Municipal Office, 5, Surendra Nath Banerji Road, Calcutta.

Letters and other contributions must always be written on one side of the paper only and signed by the writer. Their publication in the "Gazette" however, must not be taken to imply endorsement by the Corporation or by the Editor of any opinions that may be expressed in them.

Mss. and photographs sent for publication will not be returned unless they are accompanied by fully stamped and addressed covers.

All communications intended for publication in the "Gazette" must reach this office at least six days in advance of its next date of issue.

Grants To Calcutta Hospitals During 1941-42

To The Editor, "Calcutta Municipal Gazette."

Sir,—I for one congratulate our City Fathers on the sensible step they took yesterday to restore the above grant to its full dimensions, *viz.*, about Rs. 6,00,000. Most of the important Hospitals of the city.—barring those owned by the Government, are struggling heroically against want of sufficient funds to discharge their primary duties. Institutions of this nature with heavy and fixed obligation cannot carry on, unless they have also fixed and dependable sources of income. Public charities are always fluctuating and inherently incalculable. One of the principal and really dependable sources is the generous contribution made by the Corporation authorities from year to year. A 25 per cent cut as proposed would be disastrous for these institutions.

It has been stated that the restoration would deprive the Corporation of the power to raise loans to the extent of Rs. 30 lakhs and would, therefore, interfere with the internal and external drainage scheme. In the first place, the revised Budget as accepted has provided for a surplus of Rs. 411,500 instead of a deficit of Rs. 76,000 shewn in the Chief Executive Officer's Budget. This is an improvement to the extent of Rs. 487,500. Moreover, a cut on salaries of higher officers aggregating Rs. 100,000 has been accepted. The total improvement is, therefore, Rs. 578,500. The restoration reduces this amount by about Rs 140,000. I therefore think the Mayor put it too high when he said that the Budget recently passed *had been torpedoed*. The surplus ought still to be sufficient to provide a legal basis of the whole of the proposed loan of Rs. 37,03,000. The step taken does not in my view affect budgetary rectitude in any way.—Yours truly,

NRIPENDRA K. GUPTA.

Calcutta's Population

To The Editor, "Calcutta Municipal Gazette."

Sir,- The Census Authorities have enumerated 21,20,000 persons as the population of Calcutta in 1941. As the last Census gave a population of 11,96,734 only, the increase is over 85 per cent. This at the first sight looks absurd but in reality this may not be so. The Census figures of 1931, were admittedly incorrect as the Census itself was boycotted by the Hindus who form by far the majority of the population of Calcutta. Ordinarily a census is even at best only 90 per cent. correct. If we take last census figures as 80 per cent. correct and take into account the fact that tens of thousands of people refused to be enumerated, the increase shewn cannot be over 85 per cent. It may be usefully added that in the ten years 1921 to 1931, the increase of population was shewn as 119,470 only, *i.e.*, a little over 10 per cent, which could not be true. In the decade 1931 to 1941 Madras's population has increased by over 40 per cent., Nagpur's by 41 per cent., Bombay's by 29 per cent., The population of Baroda, Bikaner, Indore and Gowalior has increased in the same period by more or less 50 per cent. Even if we make every allowance for communal manipulation (*pace* Mr. Fazlul Huq), the measure of incorrectitude cannot be more than 5 to 6 per cent. Calcutta has grown immensely and hundreds of new factories have been started within the municipal limits. Calcutta's population has indeed gone up by leaps and bounds.

Apart from the normal migration of people from the adjoining districts so many from East and North Bengal, Assam, Bihar, U. P., Orissa, Madras, the Punjab, Rajputana, Central India, Kathiawar, Sind and Bombay have flocked to the City since the last census that I think it will be no exaggeration to say that the population cannot in any case be less than 20,00,000. I think, therefore, there is no need to decry the figures as wildly incorrect or absurd. Even if we knock off 6 per cent, the total would still be 19,92,800.—Yours truly,

NRIPENDRA K. GUPTA.

CORPORATION CO-OPERATIVE CREDIT SOCIETY

EMPLOYEES' ASSOCIATION

Second Annual General Meeting

The Second Annual General Meeting of the Calcutta Corporation Co-operative Credit Society Employees' Association was held on Monday, the 31st March, 1941 at the Society Office

Mr. R. R. Roy Chowdhury, President of the Association, took the chair.

After the confirmation of the minutes of the Proceedings of the 1st Annual General Meeting, the Annual Report and Audited Accounts were adopted.

The following members were elected Office bearers for 1941:—

President:—Mr. R Roy Chowdhury Vice-President:—Mr P K. Chattopadhaya. Secretary:—Mr. Satyendra Nath Chakravarty. Treasurer:—Mr. Prokash Kumar Chatterjee Members:—Messrs. Sudhir Ch. Ghosh, Barid Baran Banerjee, S S Bose, B N Dutt and Monmohon Majumder Auditor:—Mr. Bibhuti Bhusan Rakshit

The President, Mr. R. Roy Chowdhury, was of opinion that a bigger Association if formed of all the employees serving in the Corporation employees Institutions would be in a better position to render help to the members The house welcomed the suggestion, and Mr Sarat Chandra Ghose was requested to draft a constitution accordingly.

All members were treated to light refreshments.

With a vote of thanks to the Chair the meeting terminated

BENGAL LIBRARY ASSOCIATION

Annual Meeting

The Annual General Meeting of the Bengal Library Association was held at the Central Library, Calcutta University, on March, 23. Kumar Munindradeb Rai Mahasai presiding

The following were elected office-bearers for the current year:—President—Rai Harendranath Chaudhury, M L A; Chairman—Kumar Munindradeb Rai Mahasai; Vice Presidents—Mr W. C Wordsworth, M.L A., Mr. A. N. Basu, Mr Humayun Z. A. Kabir, M.L.C., Kumar Saradindunarain Ray and Mr. Nirmalchandra Ghosh; Secretary—Dr. Niharranjan Ray; Joint Secretary—Mr. Pramil Chandra Bose; Assistant Secretary—Mr Pulinkrishna Chatterjee Treasurer—Dr A. B M. Habibullah; Librarian—Mr. Subodhchandra Mookerjee.

ROYAL AGRICULTURAL AND HORTICULTURAL SOCIETY

Annual Meeting

An account of the activities of the Royal Agricultural and Horticultural Society of India, Calcutta, was given at its Annual Meeting.

In his annual report, the President, Mr. J. H. Burder, said that the year had ended with the biggest profit the Society had made for the last 25 years. The result had been achieved without any neglect in the matter of general upkeep and without any suspension in steady improvements which the Garden Sub-Committee had been working for.

The following Council was elected for the current year. President:—Mr. J. H. Burder; Vice-Presidents:—Mr J. S Graham and Mr. G. C. Law; Members:—The Maharajadhiraj Bahadur of Burdwan, Maharajkumar of Burdwan, Mr. A. P. Benthall, Mr. T. S. Gladstone, Mr. P. Goenka, Mr. W. L. Gordon, Sir Thomas Lamb, Dr. S. C. Law, Mr. C. K. Nicholl, Mr E M. Smythe, Mr. A. N. Wardley and Mr. J. N. Roy.

SOUTH CALCUTTA CIVIC WELFARE ASSOCIATION

Annual General Meeting

The Annual General Meeting of the South Calcutta Civic Welfare Association was held at the Tirthapati Institution in Rashbehari Avenue with Mr. J. K Biswas in the chair.

There was a fair attendance of members who showed keen interest in the proceedings. Though an infant institution, the Association under the able guidance of Rai Bahadur T C. Dutt, I.S.O., and the active co-operation of its members has been able to set up a record of achievements The Association among others tried to improve water supply in the locality, arrange for a urinal in the Deshapriya Park, reduce the overcrowding in the tram cars on the Ballygunge Dalhousie Square section, improve the *bustees*, remove service privies in certain areas and remove brothels from Manoharpukur Lane and the Association was partially successful

One of the primary objects of the Association is to educate the public in civic consciousness and to develop in them the kind of civic sense which contributes to make a full-fledged citizen, always alive to the vital interests of himself and his neighbours.

CORPORATION JAMADARS, PEONS AND WORKERS ASSOCIATION

The following resolutions were passed at the meeting of the menial employees of the Corporation held recently at Wellington Square under the presidentship of Mr. Ram Krishna Singh

This meeting notes with regret the attitude of the members of the Corporation in turning down the proposal of Mr Madan Mohon Burman providing funds for Dearness Allowance in the Budget for 1941-42 inspite of the fact that Government of Bengal and Government of India (for offices in Calcutta) have passed orders for payment of such allowance on certain terms and conditions.

That a representation to be made to His Excellency the Governor of Bengal to consider the deplorable condition of labour staff under the Corporation of Calcutta requesting him to arrange for "Dearness Allowance" at once.

That a copy of the representation be sent to the Mayor, to the Commissioners of Police, Calcutta and District Magistrate, 24-Parganas for information and confirmation.

VACCINATION IS A SIMPLE OPERATION WHY SHOULD YOU FEAR IT?

LEGAL INTELLIGENCE

ATTACHMENT ORDER ON MAHAJATI SADAN PREMISES

Petition For Vacating Rejected

FIRST DAY

Evidence and arguments on the question as to whether premises No. 166, Chittaranjan Avenue (Mahajati Sadan) is public property or the private property of Mr. Subhas Chandra Bose, were heard by Khan Bahadur Wali-ul-Islam, Additional Chief Presidency Magistrate, on Saturday, the 29th March, 1941.

The matter arose following a joint petition submitted before the magistrate on behalf of Mr. Sarat Chandra Bose, secretary, Mahajati Sadan Committee and Mr. N. C. Mitter, secretary, Subhas Congress Fund, praying that the court's orders for attachment and appointment of a receiver in respect of the premises should be vacated and the claim of the petitioners to the property be allowed.

Mr. Sarat Chandra Bose and Mr N. C. Mitter were examined by their Counsel Mr P. C. Bose Mr. Sarat Chandra Bose stated that he had been the secretary of the Mahajati Sadan Committee since last year. He was appointed as such by Mr. Subhas Chandra Bose, who formed the Committee with Mr. P. R. Das, (a former Judge of the Patna High Court), Mr. Satyendra Chandra Mitra (President, Bengal Legislative Council), Mr Suresh Chandra Majumdar (a landlord), and Mr N C Mitter (secretary of the Subhas Congress Fund).

The foundation stone of the Mahajati Sadan was laid by Dr. Rabindra Nath Tagore, and Mr Subhas Chandra Bose made a declaration in the course of his speech on that occasion that the building would be the house of the nation. So far as witness knew, Mr. Subhas Chandra Bose had not spent any single farthing towards the construction of the building. The expenditure for the building was borne out of the Subhas Congress Fund and also the fund raised by the Mahajati Sadan Committee.

Cross examined by Rai Bahadur P. G. Mookerjee, Public Prosecutor, witness said that he was also the treasurer of the Mahajati Sadan Committee. As far as he remembered, about Rs. 70,000, has been spent for the construction of the building out of the funds raised from the members of the public.

Mr. P. C. Bose, Counsel for the petitioners submitted that the Mahajati Sadan could not be attached nor could any receiver be appointed with regard to the premises as it was not the personal property of Mr. Subhas Chandra Bose against whom a proclamation had been issued. The structure had been built out of the public funds and for the benefit of the public and Mr. Subhas Chandra Bose had no beneficial interest in the property.

In support of his contention, Counsel read the letter of Mr. Subhas Chandra Bose to the Calcutta Corporation before the lease of the land was granted by the Corporation for the building. In the letter, Mr. Subhas Chandra Bose had written that the Mahajati Sadan would be built out of the public funds and would be used and utilized for the public in the shape of a hall for public lectures and public meetings and also a public library. In the letter, it was mentioned by Mr. Subhas Chandra Bose that after the completion of the building, he would create a trust to carry out the object of the Mahajati Sadan.

On receipt of that letter, Counsel continued, the Corporation passed a resolution at a meeting granting the lease and Mr. Subhas Chandra Bose also made a speech at that meeting stating that the building would be to the great benefit of the public if his application for the lease was granted.

So, it was clear, Counsel argued, that the lease was not granted for Mr. Bose's personal cause or personal interest. It was a mere accident that Mr. Bose's name was connected with the Mahajati Sadan. It was also mentioned in the letter of Mr. Bose that he would nominate trustees and a trust would be created to carry out the object of the Mahajati Sadan. During the construction of the building, Mr. Mitter, secretary of the Subhas Congress Fund, took possession of the land and the money of the latter fund and also funds raised by the public had been utilized for the purpose

In these circumstances, Counsel concluded, it could not be said that Mr. Subhas Chandra Bose had any beneficial interest in the building nor was it his personal property.

The Public Prosecutor argued that so long as the property was not formally conveyed to the trust, it could not be described as public property. So long as the property was not conveyed to a board or a trust, the structure remained the personal property of Mr. Subhas Chandra Bose It was immaterial what fund had been utilised for the building of the structure. The property belonged to Mr Bose so long the trust was not created and the property was not conveyed to it by him.

The Magistrate reserved orders till Monday, the 31st March.

SECOND DAY

The Magistrate, passed orders on Monday.

The Magistrate, in course of his order, said that Mr. Subhas Chandra Bose was undergoing trial in this court under Section 38 (1) (a) and (c) and 38 (b) of the Defence of India Rules. He absconded while the case against him was pending A warrant was issued against him but was returned unexecuted. Action was taken accordingly under Sections 87 and 88 of the Criminal Procedure Code; and, in pursuance of the orders issued under the latter Section, the leasehold rights and the structure on No. 166, Chittaranjan Avenue was attached as they were reported to be in the name of the absconder.

The joint claim has been put in by Mr. Sarat Chandra Bose and Mr. Nripendra Chandra Mitter asking that the order of attachment should be removed and their claim be allowed Both had given evidence on their own behalf. Mr Sarat Chandra Bose represented himself to be the Secretary and Treasurer of the Mahajati Sadan Committee, Mr Nripendra Chandra Mitter stated that he was the Secretary of the Subhas Congress Fund.

It was stated in their claim that Mr. Subhas Chandra Bose obtained the lease for 99 years from the Calcutta Corporation of 166, Chittaranjan Avenue for the construction of a hall to be used for holding public lectures and meetings and for the accommodation of a club and library. Mr Subhas Chandra Bose, according to them, was merely a trustee and had no personal interest in the lease It was further stated in the claim that Mr. Nripendra Chandra Mitter as Secretary of the Subhas Congress Fund obtained possession of the land and started construction thereon and also made provision for under-ground air-raid shelters. Subsequently, Mr. Subhas Chandra Bose formed a Committee styled as Mahajati Sadan Committee to supervise the construction of the building.

It was clear, from the evidence of the two gentlemen as well as from the language of the lease granted by the Corporation of Calcutta, that Mr. Subhas Chandra Bose had obtained the lease-hold right in his own name for the purpose of constructing a hall for public use. The lease contemplated that Mr. Subhas Chandra Bose would erect a building within three years and on its completion he would hand it over to a Board of Trustees.

Mr. Sarat Chandra Bose had stated in his evidence that he was appointed by Mr. Subhas Chandra Bose as Secretary and Treasurer of the Mahajati Sadan. Mr. Subhas Chandra Bose also appointed a Committee of five members called the Mahajati Sadan Committee. He was prepared to believe that Subhas Congress Fund Committee and the Mahajati Sadan Committee have between themselves spent Rs. 70,000 for the structure but it did not appear to him that they had any legal status at all in the terms of the lease.

In his opinion, whatever action they had taken so far was for and on behalf of Mr. Subhas Chandra Bose. It was not a fact that Mr. Nripendra Chandra Mitter took possession of the plot as Secretary of the Subhas Congess Fund. The documentary evidence showed that Mr. Mitter took possession for and on behalf of Mr. Subhas Chandra Bose as his constituted attorney. He guardedly admitted that in his oral evidence.

So the legal position of the Mahajati Sadan Committee and Subhas Congress Fund Committee was that they were agents of Mr. Subhas Chandra Bose

It was pointed out that under Section 88 (1) Cr. P. C., an order of attachment could be passed only in regard to the property belonging to the proclaimed person and it was contended that the lease hold right did not belong to the proclaimed persons. If this lease-hold right did not belong to Mr. Subhas Chandra Bose to whom did it belong then? Did the document support the right or the title of the Mahajati Sadan Committee or Subhas Congress Fund Committee? The Magistrate did not find that it did

The lease-hold right was conferred on Mr. Subhas Chandra Bose alone; and so, as there was no valid trust created by him by a registered deed, he continued to be the lessee of 166, Chittaranjan Avenue in the eyes of the law. When he had no contemplation and could not confer any right to the two committees, the Magistrate did not find the claim of their Secretaries to be valid and rejected the petition.

Rai Bahadur Probodh Gopal Mukherjee, Public Prosecutor, with Mr. B. C. Sen (Jr.) Public Prosecutor, appeared on behalf of the crown.

Notice Served on Government

The *United Press* understands that a notice has been served by Mr. R. Majumder, Solicitor, on the Chief Secretary to the Government of the Province of Bengal at the instance of Mr. Sarat Chandra Bose, Secretary of the Mahajati Sadan Committee and Mr. Nripendra Chandra Mitra, Secretary, "Subhas Congress Fund," in their respective personal capacity also as such respective Secretaries of the said two Committees respectively and on behalf of or for the benefit of the general public and in particular the citizens of Calcutta, that they would institute a suit in the Original Side of the Calcutta High Court asking, among other things, for the following reliefs:—

1. For a declaration that the order for attachment and appointment of Receiver under Section 88 Criminal Procedure Code of the leasehold right in premises No. 166, Chittarenjan Avenue in the town of Calcutta under the lease granted by the Corporation of Calcutta in the name of Mr. Subhas Chandra Bose on the 20th day of August, 1938, and the structure erected thereon commonly known as "Mahajati Sadan", procured at the instance of S. C. Burman, Inspector of Police, Special Branch, Calcutta, from the Additional Chief Presidency Magistrate of Calcutta on the 12th day of March, 1941, in Case No. C/1875 of 1940, Emperor *vs.* Subhas Chandra Bose of the said Court of the Additional Chief Presidency Magistrate of Calcutta was wrongful, illegal and without jurisdiction, and as such it was and is not binding on my clients and the general public and in particular, the citizens of Calcutta;

2. for a further declaration that the said leasehold premises and the structures thereon were not "the property belonging to" the said Mr. Subhas Chandra Bose within the meaning of Section 88 of the Code of Criminal Procedure;

3. for a further declaration that the said Mr. Subhas Chandra Bose was merely a trustee for and on behalf of the plaintiffs and the general public and in particular the other citizens of Calcutta for whose benefit the said lease was obtained by him and in his name;

4. for recovery of Rs. 1,00,000 from the province of Bengal for and by way of damages for such wrongful and illegal attachment and for the appointment of Receiver of the said leasehold premises and the structures thereon;

5 for an injunction restraining the province of Bengal (in the intended action) from taking further steps under the provisions of the said Section 88 of the Code of Criminal Procedure in respect of the said leasehold premises and structures.

SUIT FOR DAMAGES DISMISSED

(Before Mr. Justice McNair)

BIJALI KUMAR BANERJEE *vs.* THE CORPORATION OF CALCUTTA

His Lordship dismissed this suit (reported in the *Statesman* of March 21 last) in which the plaintiff, Bijali Kumar Banerjee, claimed Rs. 10,000 as damages against the defendants, the Corporation of Calcutta, for alleged malicious prosecution by the later

Mr. S. K. Basu and Mr. D P. Chatterjee appeared for the plaintiff; Mr. S B. Sinha and Mr. A. C. Ganguly for the defendants

The prosecution was under section 317 read with section 499 of the Calcutta Municipal Act, 1923 before the Municipal Magistrate, Calcutta.

Delivering judgment, His Lordship held that there was no evidence of malice on the part of the defendants. The plaintiff had been repeatedly written to and the summons had been served on him as the owner of the premises Nos. 23 A, and 23B, Masjidbari Street, Calcutta, but he had never intimated that he was not one of the owners In the circumstances, the defendants had reasonable and probable cause for prosecuting him as the owner.

Regarding the question of damages, His Lordship held that the plaintiff had failed to prove that he had incurred any expenses in defending himsef. He was being maintained by his mother who was also prosecuted along with him as a co-owner and she might have arranged and paid for his defence. She was eventually convicted and fined Rs. 10.

The plaintiff failed to appear before the Magistrate on November 14, 1936 which was the first date fixed for the hearing of the case and the warrant was issued. On that very day he came to know of it but took no steps until December 11, 1936, when he was arrested in execution of the warrant.

The suit was dismissed with costs.

Attorneys—Mr. D. N. Ganguli; Mr T. C. [illegible].

VITAL STATISTICS

(I)

For the City of Calcutta for the week ending 22nd March, 1941

CITY OF CALCUTTA (TOWN AND SUBURBS)

The total number of deaths registered during the week was 1252 against 866 and 933 in the two preceding weeks and higher than the corresponding week of the last year by 690. The general death-rate of the week was 87·1 per mille against 35·0 the mean of the last five years.

Town (Wards 1—25 and 27).

The number of deaths registered during the week ending 22nd March, 1941, was 1038 against 727 and 802 in the two preceding weeks. There were 41 deaths from cholera, against 20 and 23 in the two preceding weeks. There were 493 deaths from small-pox during the week against 237 in the previous week. There were 5 deaths from influenza against 2 in the previous week. The mortality from fevers and bowel-complaints amounted to 34 and 65 respectively against 24 and 55 in the preceding week. The general death-rate of the week was 54·0 per mille per annum.

There were 52 imported deaths. Excluding these, the death-rate of the Town was 51·2.

There were 116 deaths from respiratory diseases against 123 in the previous week.

There were 67 deaths from tuberculosis against 54 in the previous week.

There were 198 deaths of infants under one year.

Suburbs (Wards 28—32)

The number of deaths registered was 214 against 139 and 131 in the two preceding weeks. Of these 10 were from cholera, 94 from small-pox, 1 from influenza, 11 from fevers, 21 from bowel-complaints and 20 from respiratory diseases The death-rate of the suburbs (or added areas) was 78·2 per mille.

There were 10 imported deaths. Excluding these, the death-rate was 74·6.

There were 14 deaths from tuberculosis against 11 in the previous week.

There were 50 deaths of infants under one year

(II)

For the City of Calcutta for the week ending 29th March, 1941

CITY OF CALCUTTA (TOWN & SUBURBS)

The total number of deaths registered during the week was 1078 against 1252 and 866 in the two preceding weeks and higher than the corresponding week of the last year by 487. The general death rate of the week was 49·1 per mille against 350 the mean of the last five years.

Town (Wards 1—25 and 27)

The number of deaths registered during the week ending 29th March, 1941, was 925 against 1038 and 727 in the two preceding weeks. There were 89 deaths from cholera, against 41 and 20 in the two preceding weeks. There were 317 deaths from small-pox during the week against 493 in the previous week. There were 5 deaths from influenza against 5 in the previous week. The mortality from fevers and bowel-complaints amounted to 36 and 78 respectively against 34 and 65 in the preceding week. The general death-rate of the week was 48·1 per mille per annum.

There were 89 imported deaths. Excluding these, the death-rate of the Town was 45·0.

For specifications and tender forms apply to the Keeper of Records between 11 a.m. and 3 p.m. on week days and 11 a.m. and 1 p.m. on Saturdays. Price Rs. 2 per set.

1. Supply of Mother Binders during 1941-42.

2. Supply of Unani Medicines during 1941-42.

3. Supply of Disinfectants during 1941-42.

4. Cutting and restoring trenches in public roads for laying water mains during 1941-42.

Tenders for 1 and 2 will be opened on 8th April and for 3 and 4 on 18th April, 1941. The rates quoted in tenders for the above are to hold good for three months.

N.B.—All cases of delay over a fortnight in the execution of agreements in respect of works and supply of materials will be reported to the Committee and the parties will not be allowed to execute the agreements after that period without obtaining orders of the Committee.

In case a party deposits earnest money by cheque, he must deposit the cheque at least three working days before the date of opening of the tender.

The contractors should maintain an uniformity of their names and styles of business, appearing on various documents, *e.g.*, Treasurer's receipts, tender forms, agreements, licenses and bills.

Any deviation from this on the part of any contractor whenever detected, will render his tender liable for cancellation.

Where tenders are submitted by a Corporation, it should be signed by a principal officer of the Corporation or by an agent duly authorised in that behalf and be attested by a witness. Where it is submitted by a firm, it should be signed by the proprietor or one of the partners or by an agent duly authorised in that behalf by the firm and be similarly attested

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 2nd April, 1941

Time Extended.

Re : Registration of names as contractors for Petty Plumbing and Petty Improvement Works for the year 1941-42.

The date for receiving applications for registration of names as contractors for the following has further been extended. The applications for (1) and (2) below will be received by the Second Deputy Executive Officer upto 2 p.m. on the 22nd April, 1941, instead of on the 31st March, as previously advertised.

(1) Petty Plumbing and House Drainage Works of the Corporation for the year 1941-42.

(2) Petty Improvement Works (other than petty plumbing and house drainage works) of the Corporation for the year 1941-42.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office.
The 22nd March, 1941.

Notice to Contractors

EXTENSION OF TIME

The date for receiving tenders for cutting and restoring trenches in public roads for laying water mains during the year 1941-42, has further been extended. The tenders in this connection will be opened by the Second Deputy Executive Officer at 2 p.m. on the 18th April, 1941, instead of on the 27th March, as previously advertised.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 24th March, 1941.

Notice to Petty Improvement Contractors.

District No. I Engineer's Department.

Tenders for the following works are invited and will be received by the Chief Engineer in duplicate in a sealed cover superscribed "Tender for Petty Improvement works" on Friday, the 18th April, 1941, up to 2 p.m. :—

The Petty Improvement Contractors are requested to call at the Central Municipal Office to receive the tender forms from the Central Record Keeper and to note the items and descriptions of works for which tenders are to be submitted, from a copy kept in the District Engineer, District I (Cossipore Office), for inspection.

1. Repairing and replacing the worn out sashes of doors and windows in Tallah Pumping Station, Ward 30—Rs. 409, dated 8th March, 1941, (15 days).

N. B.—Please note that words in italics "7 days' notice" in clause 6 of the condition of contract should be read as "3 days' notice".

S. C. GHOSH,
District Engineer I.

District I Eng'g. Office,
The 2nd April, 1941.

District III Engineering Department

Tenders for the following works are invited and will be received by the Chief Engineer in duplicate in a sealed cover superscribed "Tender for ....." on 9th April, 1941, up to 2 p.m. :—

1. Closing up the remaining portion of fencing with angle iron in front of 5/1, Guriahata Road—Rs. 50, dated 2nd April, 1941, (7 days)

2. Construction of lamp hole for House drainage connection of 6, Maijuddin Jamader Khan Road—Rs 74, dated 2nd April, 1941), (7 days)

3. Closing openings at 2/1, Uriapara Lane—Rs. 136, dated 2nd April, 1941, (7 days).

4. Supplying and fixing a notice board at Eastern park (Park Circus)—Rs 20, dated 2nd April, 1941, (7 days).

N. B.—Please note that words in italics "7 days' notice" in clause 6 of the condition of contract should be read as "3 days' notice".

A. F. NABI BAKSH,
District Engineer III.

District III Eng'g. Office.
The 2nd April, 1941.

Carriage and Horse Tax Etc.

1st Half-Year, 1941-42.

Owners and persons in charge of carriages, jinrickshaws, racehorses, horses, ponies or mules, are hereby informed that Section 167 (1) and (2) of the Calcutta Municipal Act, 1923, requires that a statement showing the number of vehicles and animals owned or kept in their charge, together with the tax payable, should be forwarded to the Municipal Office before the 1st May, 1941. Printed forms of such return may be obtained on application to the License Officer at the Central Municipal Office. It is further notified that failure to forward such return entails liability to prosecution and to a fine of Rs. 20 Persons, who, for the sake of convenience, prefer to make payments of taxes on the spot, may pay such amount as may be due, to the Inspector, when he calls; he is authorised to receive money and grant license then and there. Claims for remission of tax on carriages on the ground that they were not used, will not be entertained after the 30th June, 1941

Registration of Carts.

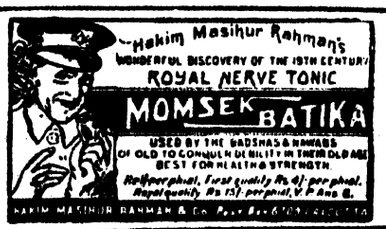
The half-yearly registration of carts under Section 185 of the Calcutta Municipal Act, 1923, for the current half-year begins on the 1st April, 1941. Owners of carts, including hand-carts, which are not used for the conveyance of human beings, should get them registered without delay The fee payable for registration of every cart shall be Rs. 4. An additional charge of one rupee shall also be payable in each case for the number-plate to be affixed to the cart

Cart Drivers' Ticket

Under Section 187 of the Act, drivers of carts are required to carry (exposed to view) a ticket granted by the Corporation bearing the registration number as driver

Tax on Dogs

Under Section 173 of the Act, a tax at five rupees per annum is payable for every dog kept in Calcutta and the owner or person in charge is required to forward to the Municipal Office before the first day of May a list of dogs owned by him or in his charge and at the same time pay to the Corporation the tax payable in respect of every such dog. On payment of the fee, a license will be issued for the current year and a number ticket will be provided to be kept attached to the collar or otherwise suspended from the neck of the dog. Any dog which has no number ticket so attached or so suspended runs the risk of being seized or destroyed



BHASKAR MUKERJI,
Secretary to the Corporation

Central Municipal Office.

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—
10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.
Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

G. C. WOODWARD,
Supdt., S. S. Hogg Market.

Chronicle & Comment

THE MAYOR AND THE CITY

WE print on a subsequent page the full and authorised text of the address on "Our City," which the Mayor, Mr. Abdur Rahman Siddiqi, delivered before the Rotary Club on Tuesday last. It was a vigorous and outspoken speech, which did not mince matters and was intended to shake us thoroughly out of our complacency. Perhaps, the shades in it were laid a little too thick. For instance, one can hardly say to-day that in sanitation and general cleanliness, Calcutta stands in 1941 where it stood in 1881 or 1884. Having been born and brought up in Calcutta, and seen with our own eyes the yearly improvements in our civic services, we are in a position to testify that the City has not stood still. But a little blindness to the brighter side of things is not unnatural in all keen reformers, and it has to be admitted that if Calcutta has not stagnated, it has not made enough progress either. Much could have been done that has not been done, and our city still falls short of the standard by which cities and civic administration are judged in the modern world.

It is, however, not necessary to particularize over them. The Mayor lays his hand on the most serious of them when he refers, among other things, to the smoke nuisance, the litter and the refuse in the streets, the *bustees*, the beggars and the Brahmini bulls. It is on these that the attention and the efforts of any reformer must be turned. Every sensible citizen with civic pride will, we are sure, agree that the sooner these are done away with the better for the city.

Mr. Siddiqi treads more controversial ground when he seeks the causes of the unsatisfactory progress and discusses the administration of the city. His complaint against the apathy of the citizens in respect of filth and foulness and, we would add, noise, will be echoed by everybody with eyes, ears and nose, and it is really incredible to find how much of all this the average citizen is able to put up with. This apathy, it must be admitted, is the root cause of the lingering ugliness and unpleasantness of Calcutta, and they can never be removed until the citizens themselves become normally

sensitive. But, perhaps, the Mayor's remarks on "majority intoxication" and corruption will give rise to some dissent. For ourselves we are relieved to find that the Mayor does not urge on us the impossible counsel of keeping civics and politics apart, but, on the contrary, regards the mixing up of the two as almost unavoidable. He is right, however, in thinking that the incursion of politics into civic affairs may be of the right as well as the wrong sort. As we see it, a political party might have a civic programme as it has a larger political, economic and social programme, with a common thread between the two. When a political party seeks to give effect to its civic programme through the attainment of civic power, there can be nothing wrong in itself in a political party getting hold of a civic body to work its programme out. It is only when civic power is sought for *non*-civic extraneous purposes that politics becomes an intruder in civic affairs. Mr. Siddiqi is of opinion that the second kind of political influence has been at work among us, but he sets it down to the fact that the representatives of the people were driven to use the civic bodies for the ventilation of their political views on account of the fact that the old Legislative Councils, packed with official majorities, did not offer adequate scope to the representatives of the people to ventilate their views and influence the policy of the Government. This has certainly worked in favour of 'politicalizing' the municipal bodies.

On graft or '*ghoos*' too, the Mayor gives a balanced verdict. He does not lay the blame entirely on those connected with the Corporation but takes the citizens and the rate-payers as much to task as he does the others. He thus shows himself to be conscious of the wider social background of the corruption, though he thinks well enough of the common citizen to feel that "it is the few clever ones, and men of money and influence, a minority belonging to the vote-catching variety that bring our city into opprobrium." This is certainly both fair and true, but the pity of the matter is that the common citizen is so embittered and spoilt by the example of his "betters" that he shows a disconcerting readiness to follow in their footsteps as soon as he gets the means of doing so.

We agree whole-heartedly with what the Mayor says on the finances of the Corporation and the inconsiderate treatment that it receives from the Government. He supports the idea of a municipal bank, which has been discussed in the pages of the *Municipal Gazette* over and over again. The experiment is certainly overdue.

The principal point over which we feel compelled to differ from the Mayor is his remark that the Chief Executive Officer should be a member of the I. C. S. and *preferably a European*, which, incidentally, was made not in the body of the address but in reply to questions put to him in the course of discussion. But we presume Mr. Siddiqi expressed his considered opinion. But why, may we ask him, a member of the *Indian Civil Service* and preferably *a European*? He suggests this, we believe, as a means of avoiding interference with the Chief Executive Officer from Aldermen and Councillors. But is not the remedy likely to prove worse than the malady itself? A member of the Indian Civil Service—secure in the feeling about the continuance of his prospects and emoluments—and a European—more or less disdainful of the Indian Councillors and Aldermen—will, perhaps, be less amenable to pressure from them than a Chief Executive Officer dependant on the good opinion of these Councillors and Aldermen. He may also be equally amenable to certain other extraneous influences and considerations. This is but one-half of the matter. Even at its best, such an arrangement will introduce divided responsibility and power in the Corporation—a form of dyarchy in fact, which is bound to create serious practical difficulties and perhaps even deadlocks.

Nor is there any *prima facie* reason to assume that a member of the I. C. S. and a European will prove to be more efficient or considerate of the city's welfare than an Indian. The Calcutta Corporation was long in the hands of I. C. S. Chairmen and European Chairmen, I. C. S. Deputy Chairmen and European Deputy Chairmen, European Chief Engineers and European Health Officers, European Water Works Engineers and European Lighting Superintendents, but can any one say that civic administration was better in those days than they are to-day? Certainly, Calcutta *as a whole* was neither cleaner nor better attended to. Those European Chairmen and officers showed invariably a fatal lack of imagination and an almost total disregard of Indian interests in this Indian city. It was enough for them if Chowringhee and Camac Street, Wood Street or Theatre Road, *viz.* the area south of Park Street, were properly attended to in respect of civic amenities. It is only the Indianization of the Calcutta Corporation which has removed the discriminating treatment of the different parts of Calcutta, and nothing but Indian guidance, Indian control and Indian administration can guarantee the continuation of the policy.

The fact of the matter is Calcutta awaits an expert as the head of its civic administration. It is not an amateur's job. In Western countries, men are specially trained for the purpose, and given opportunities for acquiring practical experience at home and abroad. Calcutta has done nothing of the kind. If it had brought into being a properly-trained and competent *Civic Civil Service* (not the I. C. S.), the problem of selecting and appointing the Chief Executive Officer would have been easily solved. It would have been enough to select that member of the Civic Civil Service who had the greatest experience, had shown the greatest energy, and was reckoned as the most efficient. Unfortunately for the Corporation, no such Service exists, and the search for the ideal Chief Executive Officer has of necessity to be made in places where he is least likely to be found!

JERUSALEM MUNICIPAL RATES RAISED

A 25 per cent. increase in rates has been decided on by the Jerusalem Municipal Council.

The increase is due to a general desire in Palestine to ease the burden on British tax-payers who contribute grants towards the expenses of the Palestine municipalities.

The drastic provisions of the British Budget have greatly impressed all quarters in Palestine, and the high rate was announced subsequent to the publication of the Budget figures

"OUR CITY"

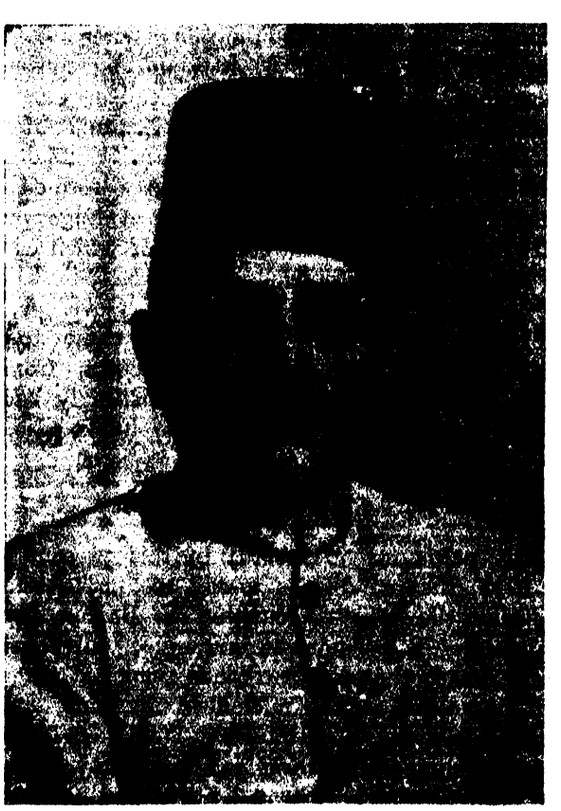
The Mayor's Address At The Rotary Club

WE reproduce below the speech delivered by Mr. A. R. Siddiqi, Mayor of Calcutta, at the weekly luncheon of the Calcutta Rotary Club, at the Great Eastern Hotel, on Tuesday, the 15th March 1941:—

A TALE OF TWO CITIES

Mr. Siddiqi said:

I am grateful to the members of the Rotary Club for affording me the opportunity of speaking to them to-day on *OUR CITY*—Calcutta, the second city of the British Empire, the City of Palaces, with its glorious *Maidan*, having busy Hooghly on one side and beautiful Chowringhee on the other. There is, however, a Calcutta, little known to the visitor or the luckier residents of the city. This Calcutta is the city of slums and *bustees*, the city with the largest floating population living on its footpaths and highways, the city with its walls embellished with cowdung-cakes, the city of dangerous dustbins, the food supply stores of crows, cats, dogs and even human beings but *par excellence* the city of Brahmini Bulls and their consorts in thousands. With its beauty-spots let us also look at its plague-spots, for then alone shall we be able to form a correct estimate of the colossal amount of work we have yet to put in to make Our City worthy of its great name and prestige.



Old History

Our City is managed by a Corporation consisting of a Mayor, 5 Aldermen and 92 Councillors. This body has come to us through a variegated and not uninteresting process of evolution. It began with a factor of the East India Company designated the *Zemindar* and, later on, the *Collector* of Calcutta. Then came a Mayor, nine Aldermen and a Mayor's Court, who gave place to a body of Justices of the Peace. Salaried Commissioners, with a Chairman getting Rs. 10,000 a year, was the next change over to be followed by an unwieldy body of 120 Justices of the Peace.

Notwithstanding these successive changes from the Collector's despotism to autonomy, and from autonomy to bureaucracy, and then back to autonomy, nothing seems to have worked satisfactorily, as the historian says: "Civic concessions and privileges were not wrung from the hands of those in power but municipal autonomy was constantly thrust upon an indolent and careless public." The critic will observe that no effort, administrative or legislative, was spared to tackle the problem of Our City but without success: it seems to elude us at every step and at every turn.

Curses All Round

Is there a curse dogging the footsteps of Our City towards betterment? The medical man curses the moisture and humidity of the place. These, he says, breed plagues and pestilences. The Public Health expert curses the drains, ditches, open canals and stagnant pools of water. These, he declares, are responsible for all our ailments. The engineer and the town-planning expert curses the muddy sub-soil and the billiard-table surface which upset all the rules of drainage and outflow. The citizens curse the Mayor, the Aldermen and the Councillors who, they say, are a bunch of the most unmitigated self-seekers and *badmashes*. They enter the Corporation to fill their pockets, build three and four-storeyed houses out of nothing and leave the city to go to the dogs. The permanent officials of the Corporation are declared to be inefficient, incompetent and venal. The slogan is "Corporation means Corruption." In the eyes of the public the two words have come to mean one and the same thing. And thus the giant wheel of curses and condemnations goes turning and turning along as if in perpetual motion.

ABDUR RAHMAN SIDDIQI
Mayor of Calcutta

Whatever views one may hold, I expect, we are all agreed that Our City carries the palm in dirt, filth and insanitation. And this is a story as old as the city itself.

In 1780

A traveller by name Mackintosh, writing in 1780, says:—"It is the truth that from the western extremity of California to the eastern

coast of Japan, there is not a spot where judgment, taste, decency and convenience are so grossly insulted as in that scattered and confused chaos of houses, sheds, streets, lanes, alleys, windings, gulleys, sinks and tanks, which jumbled into an undistinguished mass of filth and corruption, equally offensive to human sense and health, compose the capital of the English Company's government in India. The very small portion of cleanliness it enjoys is owing to the familiar intercourse of hungry jackals by night and ravenous vultures, kites and crows by day. In like manner it is indebted to the smoke raised on public streets in temporary huts and sheds for any respite it enjoys from mosquitoes, the natural productions of stagnated and putrid waters."

Grandpre's wail, ten years later in 1790, of public drains "regarded as the natural receptacles for all refuse and filth," carcasses "left to rot and putrefy in streets" and jackals preying on a human corpse near his gate, makes sickening reading.

Seventy years later the Commission reported that, in 1858, Calcutta was "what it was half-a-century ago."

In 1884

The Sanitary Commission in its Minute, dated the 5th March, 1884, stated that "if a plain unvarnished description of the streets of Calcutta, bordered by their horrible open drains, in which almost all the filth of the city stagnates and putrefies" were published, it would be considered incredible. The Commission called our city "a scandal and a disgrace . . . . . and literally unfit for habitation of civilized man." The most important streets and thoroughfares formed "to all intents and purposes a series of huge public latrines, the abominable condition of which cannot be adequately described."

In 1881, the then Lieutenant Governor, Sir Alexander Mackenzie "reluctantly came to the conclusion that the state of Calcutta from a sanitary point of view was so appallingly bad as to call for the early and effective intervention of the Government."

"No Better" To-Day

It pains me to record, in this present year of 1941, that conditions to-day are no better. A peep into the area surrounding the *Maidan*, beyond a depth of half-a-mile to one mile, will convince the onlooker that Our City has remained stagnant and in a state of indolence not only during century between Mackintosh and Mackenzie (1780—1880), but also during the first forty years of the 20th century, when the world and even some cities in India have taken great strides forward in municipal cleanliness and sanitation.

With our abominable *bustees* and labour housing conditions; primitive methods of the collection of refuse and its transportation; an incomplete and defective system of drainage; an open channel several miles long, with its tributaries, carrying the night soil of the city to water courses in the trellised delta of the Sunderbans, likely to be silted up any day, we may arrogate to ourselves the privilege and distinction of being the citizens of the second city of the British Empire but the fact remains that ours is, indeed, a very third-rate city.

The Many Problems

Notwithstanding the millions of gallons of filtered water pumped daily there is a general complaint of insufficiency from every quarter of the city. Many *bustees* do not get enough drinking water in these days of heat and thirst. The water of the Hooghly is considered by experts to be contaminated, unhealthy and insanitary and yet we sprinkle millions of gallons of this same water on the streets and permit thousands of our fellow-citizens to make use of it. Cows and ferocious bulls have become as much a nuisance on public thoroughfares and in residential quarters as beggars and mendicants suffering from loathsome diseases. Public eating houses where thousands take their daily food defy every rule of hygiene and sanitation.

The children of our city go to schools situated in houses where many would hesitate to keep their animals. Private Markets, still permitted to exist in our city, from where your servants purchase your daily requirements, often carried in refuse carts returning empty from the dumping areas, are intolerably filthy. These remarks apply to some Corporation Markets also. Hospitals, infirmaries and other centres of medical relief are so disorganized and over-worked that thousands remain unattended. Ours is still a city in which preventable diseases like cholera, typhoid and small-pox take their annual toll.

The problem of Calcutta has to be viewed and studied on the background of Bengal, in which conditions are still primitive and archaic. It is a country of stagnant pools and insanitary tanks. Government has done very little to introduce improvements and it must be admitted that the people have not been responsive to the introduction of better methods of sanitation and housing.

Man's indifference may be a handicap but Nature's hand in increasing our difficulties is indeed a calamity. The swamp of the Salt Lakes to the East of the city is a permanent menace. There are over a dozen municipalities on the periphery of our city. Financially they are not very prosperous. Any measures we may adopt within Corporation limits are liable to be nullified as disease-carrying germs have the nasty habit of crossing the border unawares and surreptitiously.

Enemies Of Our City

Smoke is another enemy of our city. The Corporation has no power to check this nuisance. Diseases of the lung are on the increase. Tuberculosis Hospitals cannot cope with the ravages of the disease unless smoke and other contributory causes are checked effectively at the root.

Sandbanks have formed at the water-heads of the Hooghly. The volume of water running down the stream is reported to be decreasing. Saline water has reached the area near our pumping station at Palta and, on occasions, we have been compelled to stop pumping. The river itself is silting up. Dredging alone will not help us. Calcutta, the premier city of India, may become, as a Corporation official put it to me, another Pataliputra.

These are problems which cannot be handled by the Corporation alone. The Government of Bengal and the Government of India must wake up and help our city to face the dangers which are menacing it on all sides. Municipal areas on

the periphery send us malarial mosquitoes but there is another and a much more serious danger lurking in our canals and ditches. A special variety of mosquitoes which breed in our boats is capable of carrying the germs of that deadly and devastating disease—YELLOW FEVER. The Corporation, the Port Commissioners and the Railway Companies are alive to the danger and have joined hands to fight it. The Calcutta Improvement Trust, which we subsidise to the extent of Rs. 20 lakhs every year, is doing its best to remove congestion, clear up unhealthy spots and open up new areas for residential purposes.

SCHEMES OF PUBLIC WEAL

Lest my hearers carry any incorrect impression of the activities of the Corporation, let me hasten to inform them that there is hardly any scheme of public weal which we have not taken in hand. Our total income is about Rs. 2½ crores and we spend about as much every year. On Primary Education we spend Rs. 15 lakhs annually and an equal amount on Medical Relief. On Roads we spend Rs. 18½ lakhs; on Water Supply Rs. 19½ lakhs; Fire Brigade Rs. 3½ lakhs and Mosquito Control Rs. 1½ lakhs. Over and above these and other items of annual expenditure the Corporation has borrowed over Rs. 8 crores, mainly to finance its gigantic water works and drainage schemes. These are figures of which any municipal organization may be justly proud. And yet the returns do not appear to be commensurate with the amount of time, energy and money devoted to the service of OUR CITY.

Nothing seems to avail. Surendra Nath Banerjea, the author of the Act, under which the Corporation functions to-day, found the machinery he had devised clog almost at the start. He had failed to harness the new and vigorous energy the nation was then generating. New men took the direction of affairs and worked Banerjea's plan to their plan. In actual practice, over a period of 18 years, the Act has been found to be unworkable and defective.

CIVICS AND POLITICS

It is difficult to keep civics and politics apart. Countries with longer experience, with a more homogeneous people and with more favourable conditions, have not been able to do so. Where the rulers and the ruled belong to two separate categories, as in India, a wholesale transplantation of foreign institutions with their distinctive laws, rules and regulations without paying heed to local conditions or studying the ingrained habits of the people, is bound to produce incongruities and lead to disappointments.

Another reason and, in my view, an equally, important one, which retarded the development of a proper Civic Sense and pushed Local Self-Government forcibly into the sphere of politics, was the fact that the old Legislative Councils, packed with official majorities, did not give sufficient scope to the representatives of the people to ventilate their views and influence the policies of the Government. They had, therefore, to take recourse to any other alternatives they could find to make themselves heard. Corporations and Municipal Boards were ready at hand and easy of access. It is not difficult to understand that popular organizations would capture these bodies and run them on lines most suited to their notions and ideas. That is what happened to Calcutta. No sooner was the Act of 1923 passed and put into operation than the Swarajist Section of the Indian National Congress took possession of it. The history of the Corporation since then has been a repercussion of the vicissitudes of that group.

"INTOXICATION OF ABSOLUTE MAJORITIES"

It started well but the intoxication of absolute majorities on the one hand and the absence of an effective opposition on the other led to degeneration. So long as there was a powerful personality at the top, fissiparous tendencies remained under control. With its disappearance the solidarity broke to pieces, factions raised their heads and demoralization set in. Had there been a better balancing between civics and politics the evil, in all probability, could have been averted or at least postponed indefinitely.

I admit that corruption, inefficiency and intrigue exist in all the departments of the Corporation, in its Committees and even in its Council. I admit that graft—or to use its local equivalent—*ghoos*, is writ large across our civic administration but I do not admit that its scope is restricted to the four walls of the Corporation. These baneful influences are wider in their incidence. They envelop the whole of our city. *Ghoos*, like mercy, is twice blest. It blesseth him that gives and him that takes. Actual money may or may not change hands but where my daily bread depends on a vote in Committee or Council, accommodation, rather than the rule of law or its penalty, becomes a more potent factor.

CORRUPTION

It will not be right to absolve the citizens and the rate-payers of their responsibility and share in the corruption which has brought our City to such a low pass. It is this action and re-action, this inter-relationship between the adminstration and the citizens and their elected representatives, that have been the bane of our civic life, the root cause of all the trouble. If rates and taxes are paid and collected as they should be, it is not impossible to imagine an annual income for the Corporation in the neighbourhood of Rs. 3 crores. Little drops of mercies become mighty oceans of leakage amounting in the aggregate to hundreds of thousands of rupees. The universal tendency to make the other fellow pay and the habit to have private requirements satisfied at public expense is not peculiar to Calcutta. I have seen it elsewhere both in the East as well as in the West. I should, however, like to feel that the average resident of OUR CITY is an honest, plain, law-abiding fellow paying his rates and taxes and leading a peaceful life; and that it is the few clever ones, the men of money and influence, a minority belonging to the vote-catching variety, that bring OUR CITY into opprobrium. It is this type that pushes its friends and relations into the Corporation services and interferes with its smooth working and efficiency.

PUBLIC APATHY

My second complaint against the citizen is that he does not revolt at the filth and foulness that surround him. He tolerates them and in many cases adds to them. A city gets the municipal administration it deserves. In the last

analysis, our redemption lies in the hands of John Citizen of Calcutta. If he too fails us, we shall have to concert measures to penalize the city into cleanliness.

THE AWAKENING

Has the awakening come? The response of the *bustee*-owners to my appeal for co-operation and the appointment of the Scientific and Technical Advisory Board at my request, are encouraging. I am grateful to the distinguished medical men and scientists of OUR CITY for the generous manner in which they have volunteered to serve the city. It is not unnatural to hope that the Corporation, like the London County Council, will give effect to the recommendations of the Board it has itself appointed.

FINANCE

Progress in public affairs is synonymous with Finance. The success, of any schemes we may undertake in the future, will depend, in a large measure, on our ability to finance them. We have a peculiar handicap in this regard. The relations between the Corporation and the Government were not friendly from 1923 onwards. They have remained so even after the Dispensation of 1935. OUR CITY has not received that consideration at the hands of the Government to which it is entitled. We do not receive any grant for Primary Education. Our share of the taxes on vehicles and petroleum is not only meagre but unjust and inequitable and yet we are expected to maintain hundreds of miles of roads and build new ones every year. Public Utilities, which should be under Municipal control, work independently. Important sources of revenue are, thus, choked up and denied to us. The new Census is likely to make our burden heavier. Increase in the rates and taxes from 19½ per cent. to the maximum of 23 per cent. allowed by the law, will be unpopular. The excess of recurring income over recurring expenditure, the basis of our borrowing capacity, has diminished dangerously and to that extent our ability to find funds for the construction of new and beneficial works, is being impeded. For the last four years we have been unable to raise any loan for capital works. The Corporation has to be kept as a going concern. The question is: How?

MUNICIPAL BANK

Expert opinion seems to favour the idea of the establishment of a Municipal Bank in Calcutta. The amount spent on the management of our loans and debentures should suffice to meet the running expenses of the bank. Pooling together all outstanding loans under a system of equated payments would bring in further savings. An annual flow of Rs. 2½ crores with deposits from contractors and employees—we pay over Rs. 2 lakhs every month to our labour staff alone—should give such a bank a good start. Under expert direction and management the funds of the bank could be applied to such productive purposes as would assist in the amelioration of OUR CITY. The question requires careful study but, having regard to the successes achieved by Municipal Banks elsewhere, I am satisfied that the experiment is worth the making, for it will render invaluable service to OUR CITY.

APPEAL TO PUBLIC

I have taxed your patience considerably but my tale of woe was long and deserving of sympathy and attention. May I close with an appeal to the members of the Rotary Club? Your efforts in the matter of the beggars are about to be crowned with success as the Hon'ble the Nawab Bahadur of Dacca assured you only the other day. Could you not now take up the question of the elimination of the *bustees*, the festering sores in our body corporate, which have acquired a chronic character? Need I remind you that these *bustees* are the starting points of our annual epidemics of Cholera and Small-pox, from which the more fortunate residents and cleaner quarters are not immune? The problem is full of difficulties, of which vested interests and insufficient housing accommodation for de-housed *bustee*-dwellers require thought and consideration. Difficulties, however, are made to be overcome. A solution has to be found; the sooner the better.

"A Disgrace To Calcutta"

Mayor Appeals For Improvement Of Calcutta 'Bustees'

AN appeal to the "bustee"-owners to help the Corporation of Calcutta even at the risk of some sacrifice on the part of the former, in improving the "bustees" in the city was made by the Mayor of Calcutta, Mr. A. R. Siddiqi, presiding at a conference of representatives of the Corporation and "bustee"-owners held in the Council Hall of the Corporation Building on Tuesday last.

The Mayor said that they would agree with him that the "bustees" were a disgrace to Calcutta, and urged the "bustee"-owners to help the Corporation in bringing better surroundings for their poorer fellow-citizens.

Mr. Siddiqi pointed out that time had now come when a definite steps forward must be taken to remove and eliminate the "bustees" from Calcutta. He expressed the hope that they would look at the problem in a rational, sympathetic and friendly way.

The conference appointed a Joint Committee consisting of 12 representatives of "bustee"-owners and the Mayor, the Chief Executive

Officer, the Second Deputy Executive Officer, the Health Officer, the four District Health Officers and the four District Engineers, to formulate proposals for the betterment of the "bustees," particularly in regard to roads, lighting, water supply, drainage, sanitation and other amenities.

A resolution expressing the opinion that the "bustees" had become a danger to the city and that the "bustee"-owners and the Corporation should co-operate in carrying out the improvements decided upon by the Joint Committee was also adopted by the Conference.

The Second Deputy Executive Officer, Mr. S. M. Yaqub, was appointed unanimously the Secretary of the Joint Committee.

"PESTERING SORES OF THE BODY CIVIC"

The Mayor said in the course of his speech : –

These *bustees* had been the pestering sores of the body civic for decades and he felt that in this 41st year of the twentieth century they should unitedly make Calcutta fit for human habitation. He admitted that their people had not reached a standard of cleanliness and hygiene. That was primarily due to their poverty. But unless the better classes of citizens and the social organisations in the city came to the help of the Corporation in this regard, nothing would avail. He urged the *bustee*-owners to help the Corporation in bringing better surroundings for their poorer fellow-citizens. He said that he knew there were difficulties in their way and that things to-day were more difficult than they would have been had there been no war and yet he was asking them in the name of Calcutta, in the name of its poorer people, in the name of the labouring and working classes to come forward and join hands with the Corporation to give them a better life and better housing conditions than they had to-day.

Mr. Siddiqi was anxious that the programme of *bustee* improvement should go forward with their sympathy and with their co-operation. He assured them that there was not the slightest intention of the Corporation interfering with their rights and interests, but, he pointed out, that time had now come when a definite step forward must be taken to remove and eliminate these *bustees* from Calcutta. He expressed the hope that they would look at the problem in a national, sympathetic and friendly way. If there was a bit of financial loss he hoped they would be agreeable to suffer it. He gave them the assurance that the effort of the Corporation would not be to put a burden on their shoulder which was more than what they were prepared to bear.

The Owner's Neglect

The Mayor accused the *bustee*-owners of neglecting to perform their ordinary duties. He said that they had not given their tenants amenities which householders and owners of properties should give. He admitted that some of them were generously inclined and wanted to see their *bustees* better fitted up, but the tenants did not respond to their high ideals. The same remark could be applied to *bustee*-owners, who acted similarly in regard to the efforts of the Corporation, which had spent tons of money every year in trying to improve conditions and yet without their active help and co-operation all its efforts had gone to waste. The *bustees* and their insanitary conditions, Mr. Siddiqi pointed out, were the danger spots of epidemics; the Corporation had to provide medical aid against epidemic diseases. It was spending over a lakh of rupees in trying to control mosquitoes, but with stagnant pools, service privies, choked gutters and drains, with abominable huts and their more abominable surroundings money so spent had been literally wasted.

Corporation's Difficulties

Referring to the difficulties standing in the way of the Corporation in introducing free primary education in the city, the Mayor said that Calcutta, the premier city of India, had not yet been able to provide free compulsory and primary education for the simple reason that money required for it was being spent on other departments such as hospitals and medical relief that they would could not release more money for education and give Calcutta this primary necessity which the leaders of the country had been trying to get them for over fifty years.

Mayor's Appeal

"I would", the Mayor continued, "most earnestly appeal to you in the name of the city which is yours, in the name of the poorer population, even at the risk of some sacrifice to come and help us. Let me tell you that if I have secured your co-operation, the Corporation will come forward and do its best. But that is not all. We have the Calcutta Improvement Trust. Supported by you and the Corporation, I feel certain that the Improvement Trust will have to consider the problem of improving the *bustees* more seriously. It has so far not paid that attention to the *bustee* problem, which it deserves. If we have taken this institution along with us, I feel confident that we can secure not only the sympathy but perhaps financial assistance from the Government of Bengal and then all of us working together to a common aim namely better housing conditions for our working classes, we would be able in time, which I place at ten years, to do things in a very efficient and helpful manner."

Dealing with what other cities have done in this direction, the Mayor remarked that Bombay first and Madras afterwards had given money and had made arrangements for habitable dwellings for the working classes. Calcutta was still lagging behind and if he could depend on their support and co-operation and also their blessings in this matter, he should consider himself lucky and he thought they would all earn the blessings of the poorer population of Calcutta.

[*The full proceedings of the Conference will appear as a supplement to the next issue of the "Gazette"*—Editor]

Maternity And Child Welfare

Corporation Exhibition Opened By Dr. Sir Mangaldas Mehta

THE maternity and child welfare exhibition, organized by the Corporation of Calcutta, in connection with the third session of the All-India Obstetrics and Gynaecological Conference, was opened by Dr. Sir Mangaldas V. Mehta—Hon. Principal Medical Officer N. M. Wadia Maternity Hospital of Bombay, the largest Maternity Hospital in India—at the Corporation Commercial Museum, College Street Market, on the 11th April

Mr. J. C. Mukerjea, Chief Executive Officer of the Corporation, in inviting Sir Mangaldas to open the exhibition, said that they wanted to have maternity and child welfare centres throughout the province and that people should come forward in larger numbers to take advantage of them.

Lt.-Col. A. C. Chatterjee, I.M.S., Director of Public Health, Bengal, said that the problem which touched the very root of the existence and progress of the nation, could be solved with the necessary goodwill and co-operation of all concerned. He emphasized the need for the imparting of health education and suggested that it should be done through every means available.

Mr. Jnananjan Niyogi, Officer-in-charge, Health Publicity Department of the Corporation thanked the different institutions for their help and co-operation which enabled the exhibition to be held and stated that his department would organize two other exhibitions in north and south Calcutta.

Sir Mangaldas V. Mehta, in opening the exhibition, said that societies to help mothers did not exist. Social workers were badly needed as intermediaries between the health visitor and the family. The district municipalities and local boards were very apathetic and what help they gave was a mere pittance while the propaganda of the health visitor was hardly ever followed up. This work, he remarked, ought to touch the very foundations of the life of the people, and if India was to have a better and healthier race of men and women in the future, a beginning must be made with the children.

GREAT IMPORTANCE OF MATERNITY CLINICS

In the course of his speech Sir Mangaldas said :—

Most of you present here may be aware that the early stage of the maternity and child welfare movement was only restricted to the establishment of maternity homes or hospitals for expectant mothers and giving some training to the indigenous 'Dais'. The importance of actual welfare work was not realised till lately, and even now there is a great lee-way to be made. This aspect of welfare work, one must realise, is beset with tremendous difficulties in the first few years by any organisation, particularly voluntary societies, considering what deep prejudices and long cherished customs of the illiterate poor in India they have to fight against. This work ought to touch the very foundations of the life of the people and if a better and healthier race of men and women in the future was to be hoped for a beginning must be made with the children, who would form the new generation.

I shall now touch upon the various phases of welfare work for the expectant mothers and their infants.

Pre-Natal Care

Though the pre-natal care is comparatively of recent introduction it forms an important part of welfare work as it lays the foundations of the health of the future child and goes a great way in reducing maternal and infant mortality. It is of paramount importance to the expectant mother which is to my mind her birth right. Its enormous value lies in the maintenance of health and alleviation of maternal suffering. The importance of this aspect of preventive obstetric medicine cannot be overemphasized as it reduces to minimum maternal and infant mortality. For this purpose the medical students and the probationer midwives ought to have good practical training in pre-natal care which in a great measure helps to reduce cases of abnormal pregnancy and labour, and safeguards the health and lives of mothers.

The more strictly obstetrical side of pre-natal care was preventive in an important degree. By foreseeing causes of danger and difficulty, steps can be taken to ensure a method of delivery calculated to minimise trauma and haemorrhage, to control toxaemia, and to eliminate the risks inevitably associated with delivery in unsuitable surroundings.

I am sorry to say that pre-natal care was wrongly understood by many medical persons, because they think that this clinic was meant to treat diseases rather than prevent them, and unfortunately these pre-natal clinics are thus degenerating into treatment centres.

In order that the pre-natal clinics may be more useful and popular, and at the same time prevent abnormalities by detecting them beforehand, there should be (1) better education in this subject for the doctor and midwife, (2) a close liaison should be kept between the clinics and the place of delivery so that continuity of observation

may be maintained, (3) routine and careful examination of the woman during pregnancy for at least six times if not eight before child birth, (4) these clinics should not degenerate into treatment centres and advice should be given to the expectant mothers and printed instructions on card be given to the patient at the time of the first visit.

A Mother's Diet

Next in importance is the diet the mother should have during pregnancy in order that she may be made quite fit for the ordeal of confinement. As you are all aware the deficiency of proper nutritional elements with mineral salts and vitamins due to poverty in India has led so many expectant mothers to suffer from pregnancy-anaemia with sometimes fatal results.

In principal cities, and large district towns in India, I am convinced that hospitalisation is any way superior, and economical to District Maternity Service (delivering patients in their own homes), but for the mofussil i.e., smaller district towns, and villages, more domiciliary service should be encouraged with hospitalization wherever possible.

The importance of health and social services has not yet been recognised in India, as it should be. Preventive and curative work should be more closely co-ordinated and Model Health Clinic should be established in connection with schools and colleges which undertake the teaching of medical students, pupil midwives and health visitors. Education of the public and rousing the sense of health and of duty towards the children are badly needed.

INAUGURAL ADDRESS

Lt. Col. A. C. Chatterjee, Director of Public Health, Bengal, and Chairman of the Advisory Committee of the Exhibition, in his inaugural address said :—

The problem of maternity and child welfare being one of the fundamental questions touching the very root of the existence and progress of our nation is an urgent and one of the most important problems that we have to deal with. I am confident that the problem is not insuperable and can be solved, given the necessary goodwill and co-operation of all concerned, i.e., the public, local authorities and the State. To achieve significant and tangible result in maternity and child welfare work we must lay special stress on four cardinal points, namely—

(1) Adequate ante-natal care.
(2) Proper health Education, particularly with regard to personal cleanliness, labour room accommodation and nutrition.
(3) Suitable facilities for midwifery services, domiciliary and institutional.
(4) Post-natal care.

Of all these, adequate ante-natal care under the present circumstances is likely to produce the most practical and immediate results. But there is no question that proper impartation of health education is essential and it should be done through every means that are available to us, viz., through schools and colleges, in mothers' and little mothers' classes, in Maternity and Child Welfare Centres, through health propaganda etc. The institutional midwifery service is necessary for the poor and those who have not clean labour room accommodation in their homes. But it is far more desirable and economical if the vast majority of normal labour cases could be delivered at home. Pregnancy is a normal physiological function of a woman and if proper health education is imparted to every woman and adequate ante-natal attention could be given to the expectant mothers there should be no difficulty in her going through the experience in her own home, in which case only domiciliary midwifery services may be required.

Maternal Deaths

Quite a number of maternal deaths occur due to post-natal causes such as haemorrhage and sepsis due to bad handling particularly by untrained women. Both these factors could be greatly eliminated if there was organised work and adequate supervision. Dais still predominate in our country and are responsible for a large number of avoidable deaths, both of the mother and of the child. We have got to give them, a status, improve their standard and control them through registration. Unless we improve the standard of their education and training and unless we control them through registration there is not much likelihood of any material improvement either in their standard or in the results produced by them when rendering services to the mother and the new-born citizen.

I would strongly urge that in all Maternity Homes and the Maternity Hospitals whether established by private individuals, local bodies or the State or in aided institutions there should be provisions for adequate ante-natal services. Unfortunately, this aspect of the question is not being realised properly in this city with the result that many Maternity Homes and Hospitals have been established but the results produced by them is not commensurate with the expenditures incurred by such institutions. Maternity Homes and Hospitals are necessary but they should be more in the form of insurance rather than as a place where every pregnant woman should go as a matter of routine for delivering her child. It should not be so. We should not be merely led away by a false sense of sentiment of providing a place where every woman could come and deliver her child as it is bound to be uneconomical.

In order to give effect to the principles enunciated above the establishment of Maternity and Child Welfare Centres is essential and the person who would be the nucleus and driving force of such a centre would be the Health Visitor or properly speaking the Public Health Nurse. There is a tremendous scope for women for social work in this direction, particularly those who are well qualified and belong to respectable families.

Proper Nutrition

Apart from personal cleanliness and suitable accommodation nutrition is an extremely important factor concerned with the health and welfare of the mother and the child. Insufficient or unbalanced diet may do incalculable harm to both. For example as a result of mal-nutrition the child may

begin its life severely crippled or badly handicapped. Or if it be a female child its chances of experiencing safely even a normal labour may become an impossibility due to osteomalacia and a contracted pelvis. Here too, proper health education regarding dietetics imparted to the mothers would go a long way to overcome these difficulties."

CHIEF EXECUTIVE OFFICER

Mr. J. C. Mukerjea, Chief Executive Officer, Calcutta Corporation, in welcoming the president said that the problem of maternity and child welfare was one of great importance to the whole province. They had been trying to create an atmosphere so that people could get best medical aid and attention. The Corporation had now diverted their attention to the *bustees* and they had been carrying on educative propaganda among the *bustee* dwellers. He hoped that people would take advantage of the Corporation Maternity Homes and would make use of these clinics in greater number. He added that such Houses were more needed not only in Calcutta but facilities should be provided throughout the province.

Obstetricians Meet

All-India Conference In Calcutta

VARIOUS problems relating to maternity and child welfare were discussed at the Third All-India Obstetric and Gynaecological Congress which commenced in the Medical College, Calcutta, on April 11, under the presidency of Dr. N. A. Purandare of Bombay.

Sir P. C. Ray in his inaugural address regretted that in India provisions for maternity services were inadequate. In rural areas midwives and maternity centres were few and far between and cases of delivery were attended to largely by untrained 'dais.' The ignorant and unscientific methods applied by them led to innumerable deaths and disablement.

It was high time, he said, that the Government of Bengal came forward and took adequate measures to tackle the problem and he urged the Government to work out a systematic programme of training.

Dwelling on the importance of efficient training in midwifery Dr. Purandare, the President, said that there was greater necessity now to focus attention on the subject since maternity homes were being opened in all cities and big towns, but he warned the Government that the existence of badly-managed and ill-equipped maternity hospitals were very harmful to the community and suggested that legislative measures should be enacted prohibiting ordinary nurses, midwives and even medical men, not properly trained in this particular branch of the medical science, from opening and running such lying-in homes.

Speaking on the question of medical relief in rural areas, he suggested that Government and social workers should work out a scheme which would make it possible for the rural population to utilize the services of experienced midwives and medical men.

Dr. Purandare also referred to the difficulty experienced now in getting drugs even of common use due to the war and suggested that they should take steps to become independent of foreign countries in the matter of supply.

Dr. Bamandas Mukherjee, in his address as Chairman of the Reception Committee, said that to his mind obstetricians and gynaecologists were called upon to tackle two most important problems. First and foremost was the problem of removing the colossal ignorance of mothers and second, that of providing more ante-natal and post-natal care for mothers in India.

The ignorant and superstitious mother was the greatest obstacle in the path of the obstetrician and the gynaecologist. As a Congress, let them in co-operation with the State and public bodies take up in right earnest this educative task and wage an incessant war against this "demon of superstition and ignorance." He stressed the need for organized propaganda in women's schools and colleges, through district boards and municipalities, medical associations and councils, newspapers in Indian languages and by means of radio and lantern slides and through pamphlets and brochures. They should carry to the remotest corners of India the elementary rules of healthy living, the principles of domestic midwifery and infant rearing and the message of hope and cheer.

Among messages wishing success to the Congress was one from His Excellency the Governor of Bengal.

Among those who attended the session were Sir Mangaldas Mehta, Lt.-Col. H. E. Murray, Dr. Lydia Torrence, Dr. Sundari Mohan Das, Dr. M. N. Bose, Dr. (Miss) P. B. Bell-Hart, Dr. B. L. Kapur, Dr. (Miss) Juliet Mary, Dr. Alice Headwards, Dr. J. Chakravarti, Dr. S. N. Bagchi, Dr. H. N. Ray, Dr. S. Mitra, Dr. S. Misra, Dr. M. N. Sarkar and Dr. U. N. Banerji.

INDIAN PORT TRUST LOANS

QUESTION OF INCOME-TAX BY GOVERNMENT OF INDIA

The imposition of income-tax by the Government of India on interest due to holders in the United Kindom of certain Indian Port Trust Loans was drawn attention to in the House of Commons by Sir John Mellor.

Mr. Amery, replying, said that the Government of India were advised that the validity of the relevant provisions of the Indian law was not open to question and the provisions could, therefore, be enforced in that country. They appreciated, however, that hardship would be caused by the enforcement of the law in the case of loans issued before the publication of the amending bill had made known the intention to legislate. They were, therefore, issuing orders that the deduction of Indian income-tax at the source is to be waived in those cases of sterling loans issued for public subscription before 1st April, 1939, where the investor is entitled under the United Kingdom law to be paid without such deduction.

General Article

First Citizen Of Chicago

The Social Conscience Of A Great City

[By Milton S. Mayer]

THIS is the story of a beggar girl. Louise DeKoven Bowen began begging when she was eight. She is eighty now, and still begging. Like most beggar stories, it isn't a pretty one, for it deals with misery, hunger, hopelessness and death. Yet strangely enough it is a beautiful story, for it tells of the high courage and burning faith of a really rich little girl who, having given her wealth to charity, went on to fight for a world in which charity would not be needed.

For 50 years Mrs. Bowen has been the social conscience of Chicago, and the one completely magic name in that rough, tough, cynical city. For two generations she has led, or founded, or pushed every move for civic betterment. Admittedly she is Chicago's first citizen—not only because once upon a time the Republicans wanted her to run for mayor, or because once upon a time she received a bomb in the mail. For 50 years she has squeezed money out of the rich, and bullied decent laws out of the politicians. Alone in the beginning, she now has solidly behind her all the men and women of Chicago who want to make their city and their world a better place to live in. In an age when "nice" women weren't supposed even to know about such things, she fought for and won the first anti-sweatshop laws in the West, Chicago's first boys' clubs and public playgrounds, as well as the first use of policewomen, the first juvenile court, the first juvenile detention home anywhere in the world. Any list of America's great women should certainly include the name of Mrs. Joseph T. Bowen.

Her grandmother crossed the prairies with a rifle on her knee. The family settled, prospered, and Lulu DeKoven was brought up to the genteel and useless possessor of many millions. What kept her from following the bell-bred pattern of her time she doesn't say, but there is a tradition in Chicago that as a girl she took God very seriously —not the God one meets in church, but the God who made the world and put all the people on it and put all the things on it for all the people to use.

One day, when she was only eight, she saw a little girl crushed by a runway horse in front of her father's house. Following the men who carried the girl home, she found a wretched wooden shack. Here were no chandeliers or tapestries, here was the naked face of poverty, something she had never seen before. As she left the shack, her thoughts were not eight-year-old thoughts. Saying nothing to her parents, she set out to beg. She begged at the back doors of all the big houses on Michigan Avenue, and the people who came to the door recognized her and gave her money. An hour later she revisited that wretched shack—with $57 in the pocket of her dress.

Her education began when it was supposed to have finished. At 16, graduated from a young ladies' seminary, she took on a Sunday school class of "bad" boys. First of all she had to prove that she was tough, which she did by whaling the sassiest boy in the class. Having won the boys' respect, she visited their homes as a friend, became a one-woman employment agency, turned the basement of her house into a boys' clubroom—probably the first on the face of the globe. For ten years she taught that class, and learned, she says, "that boys' clubs are better than policemen's clubs."

Then she taught needlework to poor girls, saw the starvation their families often faced, understood why they sometimes stole. After that came a class in homemaking. She studied tenement housing from top to bottom, and learned that model tenements could not make enough money to interest private capital. She studied charity, and learned that it eased the conscience of the rich more often than it eased the condition of the poor.

I asked Mrs. Bowen which of her countless experiences did most to educate her. She thought it was this one: "One day I went into a kitchen where 20 women were sewing buttons on trousers, for a beggarly pittance. The mother I had come to see took me into a bedroom. There, covered only with newspapers, lay a child so thin that it seemed as though her bones were sticking through her skin. On a chair beside her was a hunk of bread—her food for the day. The little girl with dirty face and matted hair, held in her fingers a long spike which she was dressing in a soiled piece of tissue paper. This, she told me, was her doll."

For four decades Mrs. Bowen has given to Hull House alone more than a million dollars, besides fighting support not to be reckoned in any mortal specie. Hundreds of slum boys who otherwise would have graduated from poolrooms have learned something better from the boys' club that she built. Thousands of underprivileged children have enjoyed their first vacation at the country club at Waukegan named after her husband. The Hull House Women's Club was the pioneer effort to help immigrant women achieve self-education. To countless Chicagoans, Bowen Hall, around the corner from Hull House, has meant their first party, their first dance, their first forum, their first symphony concert. The United Charities, the Juvenile Protective Association, the Woman's City Club—all exist, or function, or battle for causes she believes in, thanks, to her. While the public conscience yawned, she supported the Visiting Nurses Association at her own expense waging a campaign for putting nurses in every public school which has cut the spread of contagious diseases among Chicago school children to almost nothing.

Mrs. Bowen is fearless of opinion and scornful of those who cry "radicalism" at every forward step. When contributions were lost to Hull House because Chicagoans thought Jane Addams too much in sympathy with working people, Mrs. Bowen quietly made up the difference. When [illegible]ment workers struck in 1910, Mrs. Bowen helped

to raise money for their starving children. Herself one of the largest stockholders, she fought for removal of industrial hazards at the Pullman Company, fought for the abolition of the 12-hour-day at U. S. Steel. When the ultra-exclusive Fortnightly Club, after having invited Jane Addams to speak, withdrew the invitation because of her "radicalism," Mrs. Bowen, on her own authority as a member, called a special meeting and dragged Miss Addams to the platform.

Fifty years ago she introduced to Chicago the idea of the relief investigator. Thirty years ago, in a report to the United Charities, she first used the phrase "preventable misery," and made the shocking assertion that charity organizations would do better to fight for social legislation than go on for ever trying to stem the great flood of need with little sand pile of donations.

Long before the rest of her generation, Mrs. Bowen knew that a government which calls itself enlightened must deal aggressively with poverty. So she battled for laws. Armed with facts and revelations, she assailed the aldermen, the mayor, the legislature, the governor. She didn't request them to do something: she told them what to do. I have said she is a beggar—she is more than that, she is a beggar who holds people up and hits them over the head with the bludgeon of their own consciences. And the politicians were afraid of a woman who wasn't afraid of them, so Mrs. Bowen got her laws for parks and playgrounds, and hours and wages for women, and medical care for children. By now most of the movements she started have been taken over by the public.

Many years ago, when she was leading the fight to place juvenile probation officers in the courts, the campaign stalled. The men who were working with her could get nowhere. Mrs. Bowen called up the political boss of Illinois and asked him to come to her house. He came, and she told him what she wanted. He took the telephone, called one of his lieutenants in the state capital and said: "Joe there's a bill—number so-and-so—that I want passed." Apparently the lieutenant asked, "What's there in it for us?" because the boss replied "There's nothing in it, but a certain woman in Chicago wants it passed, and it's got to be passed."

It takes more than sympathy and intelligence to produce a woman who all her life has been willing to stand for principle, even against the hatred of her own "kind." It takes courage, and a sense of power. Not the uneasy power of the wealthy, but the awful power of those who are on the side of the angels. Mrs. Bowen has never doubted that she was on that side and, therefore, had no fear. If the inheritors of wealth and custodians of power had used their heads and hearts as she has hers, many of our social wounds would now be healed.

At an age when most of those who reach it are waiting quietly for sunset, she is still as unafraid and powerful and furiously busy as ever. She sends out 100,000 letters a year demanding—not asking, mind you, but demanding, for the beggar-girl has long ago become a beggar-queen—money, laws, action. She races round like a youngster, doing twice as much as most women half her age. Her tight little body, her sharp, bright eyes and her decisive mouth disguise her years. Her children and grand-children and great-granchildren would like to put her to bed at a decent hour, but—like the politicians—they're all afraid of her. Afraid of her and proud of her, like all Chicagoans, who wonder what will happen to their city if Mrs. Bowen ever decides to settle down.

But she will never settle down, for, as she says, "I'm only eighty, and there's work to be done."

ALL-INDIA INSTITUTE OF HYGIENE

Tribute To Director

The many services rendered by Dr J B Grant, Director of the All India Institute of Public Health and Hygiene, to the city of Calcutta, were recalled by the Mayor, Mr A R Siddiqi, at a party to meet Dr Grant, who is proceeding on leave to America at the Indian Institute for Medical Research Calcutta on April 11

The Mayor described the work of Dr Grant on the Water Works Board of the Corporation as magnificent They had received Dr Grant's help in many matters relating to public health

Dr. J C Ray paid a tribute to the vision drive and sincerity of Dr Grant Since his arrival in India, Dr Grant had tried to advance India's position regarding public health, not in terms of proposals but in concrete plans of action. Dr. Grant had earned the gratitude of the masses.

Dr Ray congratulated the Rockefeller Foundation on having a man of the stamp of Dr Grant, as one of their officers. It was men like him, he said, that could translate the objects of the Rockefeller Foundation into concrete terms of the health and happiness in the different countries of the world.

The members of their institute, said Dr Ray were inspired by the same ideals as Dr. Grant. They were pledged to carry on the work in the sure knowledge that they were trying in their small way to build a new India.

Replying, Dr Grant said that he was interested in the Indian Institute for Medical Research because it exemplified the spirit which every country, before it could make any progress, should have, namely, self-help.

—Training In A. R. P. First-Aid

(Continued from page 755)

organised and fully-qualified army of medical men and women who can be depended upon to take up this work and discharge it satisfactorily in a more scientific way and more expeditiously than other non-professional organisations. No question of prestige, self-respect, dignity or vested interests should stand in the way of these organisations joining hands and co-operating amongst themselves in this important work, because, after all, the aim of every one of them will be to train members of the general public in the art of rendering services to their fellow countrymen at times of emergency.

I would also perfect co-operation in this matter between all professional organisations in the country and the Governmental machinery. It will be well for the medical profession in India to remember that doctors have no politics and that the highest ideal which they should hold before them should be that of service to suffering humanity.

HEALTH & HYGIENE

Training In A. R. P. First-Aid

Dr. K. S. Ray's Appeal To Medical Organisations

An appeal to all medical organisations in India to realise their responsibility at this critical hour in the history of the country and to take up the work of opening classes for imparting training to the general public in first-aid, ambulance work and A. R. P. measures in view of the possibility of hostility breaking out in the immediate neighbourhood of India, is made by Dr. K. S. Ray, President of the Indian Medical Association, in a statement to the press.

DR. Ray says: "The way events are developing in South East of Europe provides a lesson for the medical profession in India which can no longer be ignored. The Balkan conflagration with its inevitable repercussions in the western-most part of Asia and Mr. Matsuoka's visit to the European capitals, point to a possible outburst of hostilities in the immediate neighbourhood of India at no distant future. If our apprehension in this regard comes true and India becomes the scene of enemy activities, it goes without saying that the first attack which will be delivered will come from the air with consequent high casualties among civil population of the big cities. It is, therefore, incumbent on the public at large and the medical profession, in particular, to anticipate the coming storm and be prepared to meet it. It will be the height of unwisdom to feel secure because the enemy is not yet upon us and sit idle in complacence and wait for the day when disaster has actually overtaken us and awaken us to the realisation of immediate duty. We would be wise if we prepare for the future in time and train ourselves to meet the emergent situation and be ready for all eventualities.

The first work that we should take up in hand immediately is to organise as many centres for imparting training in first aid and Ambulance work to members of the lay public as possible in all those towns which are likely to be the targets of the first attack of the enemy bombing. Chittagong, Shillong, Digboi, Calcutta, Madras, Jamshedpur, Kulti, Bombay and Delhi are some of the places which occur to us in this connection. The medical profession in all those towns should consider it their solemn duty at this critical hour in the history of the country, to review their position in the light of these considerations and take upon themselves this task of training as many members of the public as possible in First Aid, Stretcher Drill, A. R. P. measures, etc., with the resources at their command.

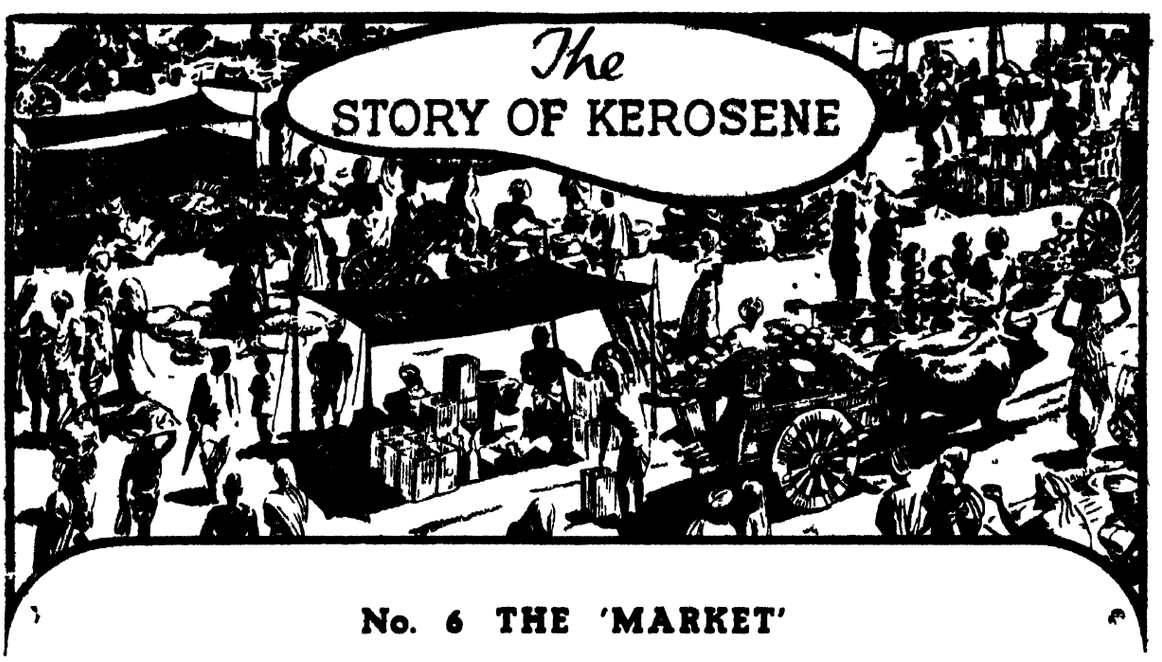
It will not be desirable nor advisable to wait for the Government machinery to make the first move in this direction because, after all, compared with the number of the independent medical practitioners the number of medical officers at the disposal of the Government in each of these towns is small and it will ultimately devolve upon the practitioners themselves to take up this work voluntarily in order to be of the greatest service at times of emergency to their own kith and kin. Whether the Government moves directly or through the agency of the St. John Ambulance Association to start this work, it is upto the medical profession itself to see that the people of India do receive proper and immediate medical attention at the time of air-raids and other forms of enemy activities, if they must keep the reputation and honour of the profession unsullied in this particular respect.

I, therefore, appeal to all medical organisations in this country without any distinction of class, creed, service or qualification, to realise the responsibility in this connection and take up the work of opening classes for imparting training to the general public in First Aid Ambulance work and A. R. P. measures as quickly as possible. The responsibility in this matter of the Indian Medical Association, the All-India Medical Licentiates' Association and similar other bodies which have branches in the different provinces and towns of India, is practically great, in view of the fact that they already possess on their rolls a disciplined,

(Continued on previous page)

TECHNICAL ADVISORY BOARD

Members Meet



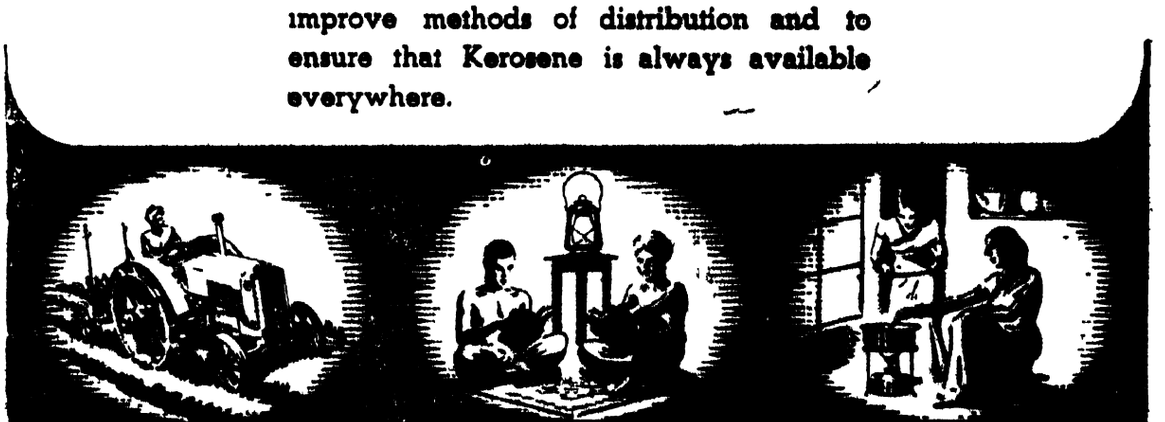
Mr A. R Siddiqi, Chairman, Scientific and Technical Advisory Board, Calcutta Corporation, met the convenors and members of the sub committees of the governing body in the Corporation Building on the 4th April, last.

Mr J. B. Grant, Director, Indian Institute of Hygiene and Public Health, who was present as Chairman of the Corporation Water Works Board, told the meeting what America had done in the matter of similar municipal boards Following this, there was a general discussion on the subject in which Dr. Meghnad Shaha, Dr. B. C Guha, Mr. J C Roy, Dr. M Ahmed and Professor A. N. Bose took part.

It was unanimously decided that each sub-committee should first of all survey the existing conditions and then prepare reports on the lines of further investigations and recommendations.

Mr. Siddiqi assured the meeting that not only members of the Corporation and its executive, but the citizens of Calcutta, fully welcomed the formation of the Board and he was certain that the recommendations of the Board would be carried out if financial and other handicaps did not come in their way.

Dr. K. C. Choudhury and Mr. Bhaskar Mukerji, Secretaries of the Board, were authorised to arrange the meetings of the various sub-committees.



No. 6 THE 'MARKET'

Wherever there is a market, you will find Kerosene.

Stage by stage Kerosene is distributed to reach the innermost depths of the country. The most remote villager is sure of a regular supply, if not actually to his door-step, then at his local 'Market'. Week in week out Kerosene is always available.

Over a period of many years, Burmah-Shell have built up not only a vast selling organization, but also a widespread service of Inspectors, whose main duties are to improve methods of distribution and to ensure that Kerosene is always available everywhere.

Bombay Municipal Building Regulations And Bye-Laws

[By G. P. Dandekar, Esq., B.E., A.M.I.E. *Special Officer, Bombay Municipality*]

THE atmosphere throughout the world in this decade appears to be charged with germs conductive to the revision of Building Codes, the cities of London, Berlin and Rome in Europe; New York Boston, Ottawa and Vancouver in America and Canada; Capetown and Johannesburg in South Africa have all revised their codes during the last few years.

Bombay being an international port could naturally not escape this infection and ever since the year 1932 there has been a clamour for the early revision of our Building Regulations and Bye-laws.

All the above City Municipalities appointed Advisory Committees consisting of from half a dozen to two dozen members drawn from their Officials and from members of the Engineering Profession and Institutions in their towns, with sufficient staff under them, to draft amendments to their Building Codes.

These Committees took from three to five years to complete their labours and the Municipal Councils took about another two years for deliberations before the amendments became law.

Lacking in broad and liberal outlook, we, in India, do things differently and so does our City. Very few had any idea of the magnitude of this work and they, perhaps, thought that a few amendments here and there were all that was needed. With such a faint idea of the work, it was but natural that a suggestion was made to entrust it to an experienced Officer of the Building Department, who would do this work in addition to his own duties. This experiment was tried for a time but it failed. There was no wonder that it failed because, due to the unprecedented building activity in the City, the Building Department was already over-worked and it was impossible to get on with this difficult task unless a whole-time Special Officer was appointed for the purpose.

The Corporation ultimately sanctioned this appointment by their Resolution No. 421 of 2-9-1937 and it came to my lot to be that Special Officer. The first thing to do before getting on with the work was to collect up-to-date Building Codes of important cities in the world and the Codes of the cities already mentioned together with Codes of Paris, Calcutta, Madras and Rangoon were obtained.

The Cities of Shanghai and Warsaw also appear to have taken into their heads to revise their Building Codes and, perhaps, knowing the Bombay was the second largest City in the British Empire, they naturally wrote to our Municipality to send them our up-to-date Building Regulations.

Imagine my plight when I was asked by the City Engineer to put up a suitable reply to these two Municipalities. I could not write to them that we were so very backward as not to have revised our Buildings Regulations for the last 84 years and our Building Bye-laws for a period of twenty years, since they were last revised in 1905 and 1919 respectively, as compared with European and

American Cities who usually revise their Codes after about ten years. I therefore prepared a reply containing a rosy picture of Reclamation Schemes, Road Schemes and some Housing Schemes carried out by the Bombay Government, the Municipality and the ex-Improvement Trust, mentioning the amounts of enormous expenditure upon them. I deliberately mentioned these amounts in lacs and crores of Rupees instead in Pounds and Shillings to make it rather difficult for them to understand.

I thought I was free from it and forgot all about it. To my surprise the Secretary of Shanghai Municipality wrote a letter of thanks to the City Engineer, expressing "The most grateful appreciation of the Council for the information therein afforded, which will prove of great value." I think, further comments superfluous.

Now, turning to our subject, I do not propose to give you any detailed history of old Bombay or its building bye-laws as it has been dinned into our ears from various platforms and through the press for several years past.

I shall therefore refer you to only such dates, charts and statistics as are absolutely necessary for a clearer understanding of the subject and in order to realise the difficulties that we have to face.

You perhaps know that the Bombay Municipality came into existence in the year 1865 and the population of the town was already about 8 lacs in the year 1868.

This enormous population was due to the boom in the Indian cotton export trade caused by the American Civil War of 1860, when Lancashire had to purchase all its cotton from India. Bombay was the chief port for its export and it attracted people from all over the country to share this boom. There were no roads, trams, adequate police protection nor street lighting in Bombay at the time and this enormous population had perforce to stay in the very small and compact area in Mandvi near to the docks. It is this area where very high buildings on narrow lanes were put up in those days and it is this area, which is called the heart of Bombay, which is the despair of the civic administrators who are not able to reduce appreciably the evils of the insanitation, over-crowding and rickety buildings there.

You must always bear in mind this difference between our city and newly laid out cities like Washington, Canberra and New Delhi, where there was open and undeveloped land like a blank sheet of paper and where you could plan your city first and then commence construction according to that plan.

In the case of Bombay a congested town as described above was already there. The Municipality with its Building Rules and Bye-laws came in afterwards. London had to face similar situation to a certain extent. This is why the earlier rules for open spaces and heights were so inadequate as they had to adjust themselves to the existing conditions.

The insanitary conditions of Bombay went on from bad to worse year after year. The Municipal Act was being amended at intervals but the only really sound and comprehensive Act was that of 1888 which even now holds sway. This Act controlled the construction of private buildings in the City, made provisions as regards height and ventilation of rooms, prescribed widths of new public streets and empowered the laying of set-back lines. It also conferred powers to frame bye-laws which were for the first time enacted in the year 1892.

These Bye-laws permitted a new building to be erected to a height of 1½ times the width of the street on which it abutted. A living room had to abut on an open area equal to 1/10th of the aggregate floor area of all rooms abutting thereon and being not less in any direction than 6 feet across.

The minimum floor area for such a room was required to be 80 square feet and its clear height was to be 8 feet.

There was no provision however in this enactment for building the height of additions to old buildings.

The Act was further amended in the year 1905 and contained the well known Sections 349A and 349B for controlling the heights *of new buildings as well as those for additions over existing buildings*.

Section 349C regarding timber-framed buildings and Section 353A regarding Building Completion Certificate to be submitted by Licensed Surveyors were also framed. This Act also amended Section 348 requiring the minimum area and height of a living room to be 100 sq. feet and 10 feet, respectively.

In the year 1910, a new set of Bye-laws was introduced and Bye-law 41 as then framed demanded only 7 feet open space for a height of 70 feet against 20 feet demanded under the present Bye-law 41.

The sanitary conditions of Bombay continued to be appalling towards the close of the last century and Municipal Act of 1888, and its subsequent amendment of 1892, were not capable of checking the slums that had already sprung up. Bombay then was a plague-striken City and almost every year plague used to break out. To tackle this problem of slum clearance, to prevent over-crowding and to better the ventilation of over-crowded parts, the City Improvement Trust was constituted in the year 1898. The Trust has carried out several very useful schemes and has opened out some of the worse slums of Bombay. The famous 63½° rule for open spaces was adopted by the Trust for buildings on its estates and it gave very good results. It was, therefore, thought advisable to incorporate this 63½° rule in the building Bye-laws which were again amended in the year 1919. New Bye-laws 41-B, 41-C and 81-D, specifying open spaces around buildings built away from streets, for additions over existing buildings and for keeping such open spaces unencroached on by subsequent structures, respectively, were framed in the same year. The City was divided into scheduled and non-scheduled areas, open spaces laid down in the current Bye-law 41, were prescribed for dwellings in scheduled areas and Bye-law 41-A based on 63½° rule was made applicable to buildings in non-scheduled areas.

This finishes the history of development of the Bombay Building Regulations and Bye-laws as they stand to-day.

It was thought that after the enactment of 1905, and the new Bye-laws of 1919, Sanitary conditions in Bombay would greatly improve. They have no doubt improved to some extent in non-scheduled areas but no satisfactory improvement is noticeable

in scheduled areas and we are again set thinking of what to do.

The first impression that one gets on reading the Bye-laws is that they are as tortuous and ill-ventilated as the poorest quarters to which they refer and in most parts as much in need of revision, re-building and re-planning.

Bitter experience in one or another form, or an act of God, such as a house collapse, fire, or plague has often forced the hands of the law-makers and resulted in somewhat hasty if on the whole common-sense measures.

It has been said that men of lion-stout-heartedness, eagle-eyed perception and sphnix-like wisdom are urgently needed to re-plan the whole tottering legal structure. I do not for a moment presume that I have been selected for this work because those who appointed me saw some of the above qualifications in me. I have endeavoured to the best of my ability to draft suitable amendments for the future healthy growth of this city and when these proposals are in your hands in printed form, in a few days time, I am certain that many amongst you and particularly amongst the Architects who may possess the above qualities will assist us by sending useful suggestions to improve upon our draft which may make our building Regulations a model for others to follow. It will be but proper on my part, before proceeding further, to mention that what little I have done is due to the training that I received under one of the very able Building Engineers of the Municipality, Mr. Talagiri, (now retired) and to the encouragement and valuable help that I received from our City Engineer, Mr. Modak, who would surprise many by the quality and amount of work that he puts through and whose recent world tour helped a good deal in securing new ideas and literature on city planning which has been very useful to me in my work. It is he who realised the urgent necessity of revising these regulations shortly after taking up the duties of the City Engineer and set the ball rolling. He has spent many a long night discussing with me these draft amendments after a hard day's work.

If there were no opportunities in the past for the framers of these Regulations and Bye-laws to base them on a preconceived plan let us begin afresh with a chalked-out programme.

We must know that a city or a town works, eats, trades, prays, buys, travels, sleeps, plays, grows. Yes, it is a *living organism*. A town planner therefore must design his city so as to enable it to function properly in all the above spheres. Some of the elementary things which require consideration before we set out on planning our city are :—

(1) The geological formation of its land.
(2) The annual rainfall.
(3) The prevailing direction of wind.
(4) The latitude in which it is situated.

The first two factors influence the structural aspect of buildings to be put up in the city, while the last two have a very great bearing on the orientation of streets and buildings.

They also play a very important part in a scheme of dividing the City into zones which we propose to do hereafter.

If you glance at the map of Bombay Island you will see that nature has endowed it with a nice elongated shape from north to south and there is a plenty of cool westerly sea breeze blowing over it throughout the year. If only man could so design his streets and buildings as to admit of free circulation of air and light from one end to the other throughout its width there is no reason why Bombay should not become one of the healthiest cities in the world.

The directions for both these are parallel *viz.*, north-west to south-east. Bombay is situated on a latitude of 19° to the north of the equator and if the streets were laid in the above direction they would get sunlight throughout the year on their surface, at least for a few hours a day, which would keep them sanitary.

Experimenting it appears that the height of a building should not exceed more than 1¼ times the width of the street while the ratio of 1 :1 is better. I have based the permissible heights of buildings in the amended Sections 349-A and 349-B of the Act accordingly. I now take you to a few defects of the existing Building Rules and Bye-laws. One is sometimes amazed at the ingenious interpretations given to the language of these Bye-laws which should really be interpreted for designing sanitary houses in the City, instead of exploiting the inherent shortcomings thereof. I think one should look at them more as an architect than as a lawyer.

There is no time at my disposal to-day to read out the suggested detailed amendments and I am not going to do it. It would also be a better arrangement to supply you with printed copies of these amendments for your perusal when they are ready. More meetings may then be arranged for detailed discussions after you have had sufficient time to formulate your own suggestions for further modifications. I would only enumerate a few of the most important items which are proposed to be controlled by these amendments and by the insertion of some new sections and Bye-laws :—

(1) Arresting smaller sub-divisions of building plots below a certain minimum area and refusing permits for alterations or repairs to buildings standing on an area below a certain minimum.

(2) Making it incumbent on the owner to submit development plans of his land, requiring him to construct roads within his premises of certain widths at his own cost and with such alignment as would fit in with the future scheme of streets in the locality.

(3) Dividing the City into zones with special rules for each zone. These rules would include the conditions applicable to buildings on ex-Trust plots and would also contain relevant provisions of the Town Planning Act. Zoning indicates control of buildings in different areas in respect of open spaces, heights and user.

(4) Obtaining powers to acquire parts of buildings in set-back whenever so required by Municipality.

(5) Prescribing regular lines on house gullies to eventually convert them into service passages of at least 10 feet width.

It will perhaps be a news to many that the total length of house gullies in Bombay is 104 miles. Imagine such long narrow stretches with central

open channels containing filth and stagnant water, in congested parts of the City. We really wonder as to how Bombay is so healthy in spite of them.

(6) Amending section 337 of the Act so as to discourage partial repairs to old buildings and accelerate their early demolition.

(7) Amending Sections 349-A and 349-B to allow greater heights than 70 ft in specified areas, or zones, and to regulate the heights on the basis of unit of floor of 11 ft. height

(8) Enforcing lighting of passages, staircases, washing-places and water-closet blocks in buildings at night.

(9) Demanding servants' quarters and garage accommodation and accommodation for drivers within the owners' own premises for the tenants in residential buildings.

(10) Demanding garage accommodation for public buildings, theatres, warehouses, etc., within their own premises.

(11) Demanding special appliances for water lifting, fire escapes and passenger lifts for residential buildings above certain heights.

(12) Powers to prescribe building lines, in addition to set-back lines on certain streets.

(13) Prescribing lines at the junctions of streets for ensuring visibility.

(14) Controlling elevations of buildings along important streets from an architectural point of view.

(15) Clearly defining the front and rear face of a building and demanding rear open space throughout its rear, even if the building is at the junction of two streets.

(16) Demanding front and rear open spaces within the scheduled area.

(17) Demanding at least 5 feet open space at the sides of a building within each owner's premises so that no two buildings can be less than at least 10 feet apart.

(18) Giving the advantage of a neighbouring open space left under the Bye-laws to an adjoining owner only to the extent of the open space that he himself proposes to leave within his own premises adjacent to such open space.

(19) Deleting the light plane altogether and applying 63½° rule to the side open space on which a living room abuts.

(20) Prescribing the minimum floor area of a single room tenement, double room tenement and tenements of more rooms by drafting a new Bye-law to substitute the present Bye-law 42. It is laid down that a single room tenant must have at least an area of 170 sq. feet which will be allowed to be divided by a dwarf partition into two compartments of 100 sq. feet and 70 sq. feet to afford the privacy to females in such a tenement which is absolutely necessary.

(21) Licensing of R. C. C. Specialists, Mistries and Contractors.

Gentlemen, there are numerous other problems of a modern City which drafters of Building Codes will have to study. They cannot, however, be dealt with in one lecture. I may simply mention some of them in passing—

(1) Ribbon Development.
(2) Low rent housing.
(3) Slum clearance.
(4) Reduction of overcrowding.
(5) Cheap and quick transport facilities.
(6) Public parking places and recreating grounds.
(7) Aerodromes.

In my opinion we must, without delay, take up the preparation of a Master-plan for the whole of Bombay so as to include in it all the above items in an orderly way. This Master-plan should be elastic to admit of subsequent minor deviations but no development in any part of the City should be allowed if it does not fit in with such a Master-plan no matter who proposes it.

Let us all co-operate and let us arrange things in such a fashion that buildings will be suitably separated from each other, that traffic will flow freely on its own way and neither obtrude into other activities nor cause death, that areas will be left at intervals to ensure breathing spaces and grounds where we and our children can play in the sun and wind. We will disentangle the muddle of huts and homes, factories, and workshops, and place them where they are best fitted to be. We will wage war on town-bred diseases, on ill-health and discontent by *PLANNING*.

A lecture delivered before the Bombay Engineering Association

PERMANENT
HUME STEEL PIPE
(with Spun Concrete Lining and R. C. C. Outcoating)
POSSESSES FULL PROTECTION, INTERNAL AND EXTERNAL. GIVES LONGER LIFE THAN UNPROTECTED METAL PIPE.
SATISFIES ALL CONDITIONS!!
Gives about 30 per cent. superior flow of water.
Saves in laying, jointing and transport.
Stands very high pressure easily.
Free from Rust and Tuberculation.
Saves a large amount initially.
Is regarded as the best Pipe by Eminent Experts.
Can be re-used after a number of years elsewhere.
Free from Bursts.
Particulars from:
THE INDIAN HUME PIPE CO., LTD.

CALCUTTA NEWS & VIEWS A Digest

I. P. SPECIAL OFFICER FOR CALCUTTA

Mr. A. H. Nunn, Executive Engineer, Chittagong Division in the Eastern Circle, is transferred, in the interests of the public service, to Calcutta, and appointed as Additional Special Officer, Rescue and Demolitions, Air Raid Precautions.

HIGH COURT

A *communique* announces that His Majesty the king has approved the appointment of Mr. Justice, Lodge, at present Additional Judge, Calcutta High Court, to be a Puisne Judge of the same court in the vacancy caused by the retirement of Mr. Justice Costello.

The Governor-General has appointed Mr. Justice Akram, at present Acting Judge of the Calcutta High Court, to be Additional Judge in place of Mr. Justice Lodge.

GOVERNOR'S CONFERENCE

The conference of leaders of different parties in the Bengal Legislature met again at Government House, Calcutta, on April 8. His Excellency Sir John Herbert presided.

After discussing the communal situation in the province, with particular reference to the recent happenings in Dacca, for about two hours the conference adjourned until April 22.

Those present were: Mr. A. K. Fazlul Huq, the Nawab Bahadur of Dacca, Sir B. P. Singh Roy, Mr. H. S. Suhrawardy, Mr. M. B. Mullick Mr. Sarat Chandra Bose, Dr. Syamaprasad Mookerjee Mr. Kiron Sankar Roy, Mr. J. N. Basu Mr Shamsuddin Ahmed, Mr. Kamini Kumar Dutta, Mr. Hem Chandra Naskar and Mr. Nalini Ranjan Sarker.

'HARIJANS AND TUBE-WELLS SCHEME

The Harijan Utthan Samity, an association for the uplift of *harijans*, have addressed a communication ,to the Chief Executive Officer of the Calcutta Corporation in connexion with the proposed scheme for the sinking of tube-wells in the city in order to ensure an adequate supply of drinking water to the citizens of Calcutta "if the present sources are disturbed in case of an emergency."

The Secretary to the Samity in his letter to the Chief Executive Officer after referring to the present "unsatisfactory" state of affairs in regard to water supply in *bustees*, urges that the present opportunity of sinking tube-wells in different parts of the city should be utilized for providing an adequate water supply in the localities inhabited by *harijans* and other poorer classes.

CLOSING TIME UNDER SHOPS ACT

Misunderstanding appears to exist among the public regarding the closing hour of shops prescribed under the Bengal Shops and Establishments Act, states a Press Note.

According to the Act the time for closing shops is 8 p.m. Standard Time, that is, 8-24 p.m. Calcutta Time, and half an hour is allowed to serve customers who are already present in the shop at 8-24 p.m. So the actual closing hour is 8-54 p.m. Calcutta time

Under the rules every shopkeeper is required to display a notice in a conspicuous place in the shop, specifying the days of the week on which the shop will remain closed for a full day and a half day, and to forward a copy of the notice and all changes in such notice to the Chief Inspector of Shops and Establishments.

A NEW HISTORY OF INDIA

Dr. Rajendra Prasad, who came to Calcutta last week-end in connection with a meeting of the *Bharatiya Itihasa Parisad*, met here Sir Jadunath Sarkar. It is understood that Editors of different volumes of the proposed history of India have been selected. There will be about 20 volumes, and the work will be immediately undertaken. Three volumes are expected to be published in course of a year.

Work on ten volumes of the History, which is being prepared under the auspices of the *Bharatiya Itihasha Parishad*, has begun. Besides Dr. Rajendra Prasad, the scholars who are collaborating in the work are Sir Jadunath Sircar, Rao Bahadur Dixit, Dr. P. C. Bagchi, Dr. R. C. Mazumder, Mr. Mohd. Habib, Pandit Nilkantha Sastri and Mr. Jaychand Vidyalankar, who will be the Secretary to the Board of Editors.

MR. SUBHAS BOSE'S RESIDENCE

ATTACHMENT ORDER OF ONE-FOURTH SHARE HUNG UP

The order attaching the one-fourth share of the premises No 38/2, Elgin Road, residence of Mr. Subhas Chandra Bose and his brothers, was hung up on Thursday morning at the said premises by the police.

A LETTER TO CLIVE

A letter addressed to Lord Clive and the Council of Fort William, on July 4, 1766, by Walter Wilkins, was exhibited and commented upon by Mr. J. C. De at an ordinary meeting of the Royal Asiatic Society.

Though yellow with age, the manuscript is legible and tells of a ship called the *Falmouth Indaman* which had become "stranded" somewhere near the mouths of the Raymungal and Mutwalla rivers, and the President and Council were anxious to save the passengers and crew of the vessel. They had written to Wilkins on June 30, and "comfortable to (their) orders" Wilkins had sent "two boats with an European" to the river-mouths with "instructions to be extremely vigilant in making constant signals by day and night as a guide to the sloops."

Circular letters were also forwarded by Wilkins to various "zemindars bordering on the sea coast to help the distressed".

REGISTRATION OF SERVANTS

The Deputy Commissioner of Police, Detective Department, Calcutta, notifies:—

During the last 8 months, 148 cases of thefts by servants were reported in Calcutta. In most of these cases the servants were new and the names and addresses given by them were found to be false. In a recent case a servant with a squint of the right eye was concerned. A servant of similar description was mentioned in two other cases. Probably the same man served in all these houses under different names. In four other cases, an Oriya servant with a tattoo mark between the eyebrows came to the notice. To check the activities of these criminals and to save householders' enormous losses, the police will undertake to verify the antecedents of servants before appointment. The public are advised either to drop a reply-paid post card giving the name, father's name and address of the servant or to call at the local police station.

An all-India organisation of beggars has come to the notice of the police. Recently two Madrassi boys who were supposed to be dumb, were on medical examination found to be normal. They kept their tongues twisted to cheat the public. On further investigation 10 other boys and girls were found in Belgatchia *bustee*. Three men and nine women were making a living out of the earnings of these children. A large number of appeals printed in all the languages of India were recovered.

A NEW X'RAY CENTRE

Kuonsashi Sebayatan, an X'ray treatment centre, attached to the charitable dispensaries managed by Daridra Bandhab Bhandar was opened by Sir Nripendranath Sircar on April 5 in the presence of a large gathering including many prominent persons, at 105/1, Raja Dinendra Street

Mr. Sudhir Chandra Ray Chaudhuri, Secretary of the Bhandar in giving an account of the activities of the Bhandar said that the society was established 19 years ago due to the efforts of a band of selfless workers. From a small beginning it had now attained its present status. Mr. Sudhir Chandra Nawn of Messrs. B. C. Nawn and Bros donated Rs. 2,500 for the establishment of an X'ray centre and had promised to contribute Rs. 4,000 to 5,000 more and a monthly contribution of Rs. 250/- for the running of the centre which had been named *Kuonsashi Sebayatan* after the name of the deceased wife of the donor. The Daridra Bandhab Bhandar proposed to spend about Rs. 5,000 for acquiring the apparatus. Besides, society had to spend about Rs. 8,000 for adding another storey to the building for the accommodation of the apparatus

Sir Nripendranath Sircar, declaring the annexe open, said that from what he had gathered from the papers of the society he could say that it had been doing useful work. The menace of tuberculosis was great and they had not the means to face the menace adequately. It was said that the Jadavpur Tuberculosis Hospital was doing great work. But in a city the population of which according to the present census was reported to be about 21 lakhs 200 or 300 beds in the Jadavpur hospital were altogether inadequate. He believed that in the city of Madras there was provision for 400 to 500 beds for tuberculosis patients.

BENGALI NEW YEAR'S DAY

An interesting feature of the Bengali New Year's Day celebrations in Calcutta, in recent years, has been the demonstration of physical feats given by boys and girls in different parks of the city and its suburbs.

This year also such demonstrations were held in many parts of the city on Monday, the 14th April. Hundreds of boys and girls marched past and saluted the National Flag and then gave a display of various physical feats, the most impressive of which were held in the Lake Maidan in South Calcutta and at Deshbandhu Park in North Calcutta.

MUSLIMS AND BENGALI LITERATURE

The contributions made by Moslem writers to Bengali literature were stressed at a conference held in the Moslem Institute Hall, Wellesley Square, Calcutta. On the occasion of the silver jubilee of the Moslem Sahitya Samiti (literary association) Kazi Nazrul Islam presided.

In his inaugural address the Premier, Mr. A. K. Fazlul Huq, emphasized the importance of Moslems studying the Bengali language. *Bengali*, he said, was their mother tongue and it was essential that Moslems should study the language as other sections of the population.

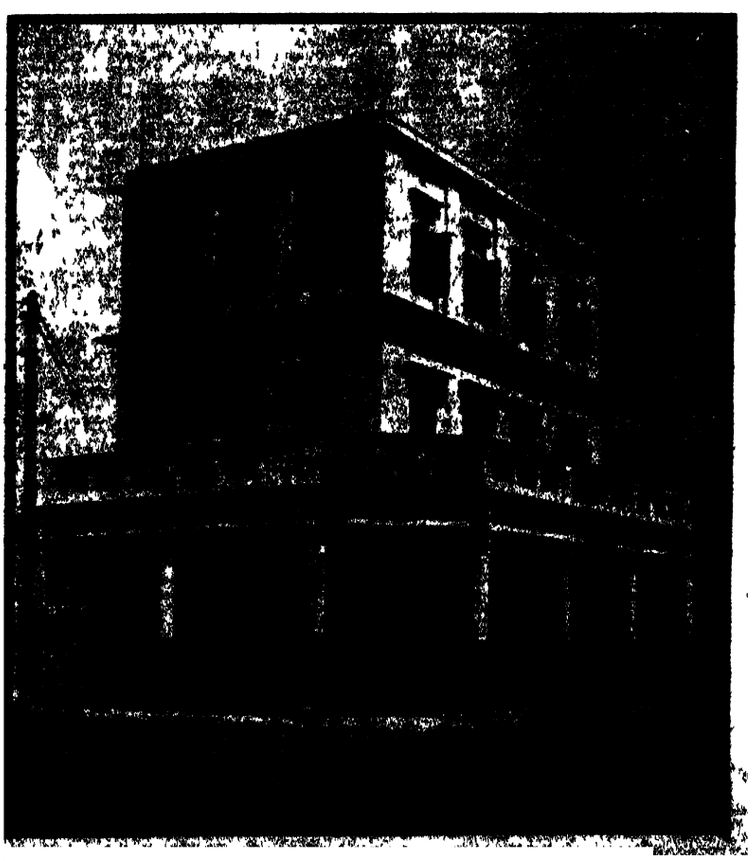
A complaint, he continued, was often heard now-a-days that the Moslem writers were mutilating the Bengali language. It would be for the conference to consider if there was any truth in that allegation, which in his opinion was made for political purposes Personally he thought that far from mutilating the Bengali language the Moslem writers were enriching it by introducing new words into it from other sources

A complaint, he continued, was often heard now a days literature would convince anyone about the important contributions made by Moslems to Bengali literature in the early stages of its growth In the circumstances it was impossible for Moslems to mutilate the language which was as much their creation as of other sections of the population

After referring to the work of the Samiti the Premier regretted that the Government had not yet rendered any help to the institution, and assured the conference that he would see what assistance the Government could give it in future

The President after dwelling on certain aspects of Bengali literature, appealed to the Samiti to render every help in its power to struggling Moslem literature in order that the community might be benefited by their literary activities. There had been, he said, many instances in which promising writers had been compelled to leave the sphere of literature and seek new avocations due to economic difficulties. In his opinion, this was a national calamity.

BENGALI MUSLIMS IN THE CORPORATION



The proposed changes in the second amendment in the Calcutta Municipal Act were discussed at a largely attended meeting of the Bengalee Muslims held at Shraddhananda Park. Mr. Syed Habibur Rahaman, President of the All-Bengal Krishak Proja Party (non-parliamentary) was in the chair.

The President Mr. Rahaman said that the present Ministry was responsible for introducing separate electorate in place of joint electorate and thus brought about present importation of the non-Bengalee Muslims into almost all Muslim seats of the Corporation Councillorship as well as into almost all Corporation Muslim services driving the Bengalee Muslims from the Corporation. The Ministry had thus betrayed the interest of the Bengalee Muslims in the Calcutta Corporation to make them pariahs in their own metropolis of Calcutta.

Mr. Rahaman urged the Corporation Hindu Councillors to make reservation of 25 per cent. of Corporation Muslim services for the Bengalee Muslims. He demanded of the Bengal Ministry to make statutory reservation of 25 Muslim seats of Corporation Councillorship for the Bengalee Muslims and provide for the adult franchise for the Bengalee Muslims in their own metropolis of Calcutta.

Mr. A. M. A. Zaman, M L.A , said that if the present state of affairs in the Corporation were allowed to continue the interests of the Bengalee Muslims would be gone for ever. He instanced the cases of several well-qualified Bengalee Muslim candidates whose claims to be appointed in the Corporation services had been brushed aside by non-Bengalee Muslim candidates from outside who had been backed by the Muslim Leaguers

Moulana Abdur Rouf, Moulana Abdul Wahab Bokainagari, M L.A , Moulavi Abdul Malek of Comilla, Moulavi Hatem Ali Naoroji and Moulavi Abdul Karim also addressed the gathering

CIVIC NEWS FROM FAR AND NEAR

RISE IN JUBBULPORE'S POPULATION

According to revised census figures the population of Jubbulpore district has risen by 17.8 per cent. and that of the city by 47.6 per cent. The population of Jubbalpore district has increased from 778,811 to 915,968 and that of the city from 124,885 to 183,544 within the last decade.

The number of literates in the city and district is 60,800 and 65,188, respectively.

GARDEN REACH MUNICIPALITY

The following have been declared elected as Commissioners of the Garden Reach Municipality as the result of the General Election :—

"Mr. Makhanlal Ghose and Munshi Rahamuttullah (Ward No. 1); Dr. M. A. Ayub and Mr. Sudhakar Paul (Ward No. 2); Haji Raisoddin and Mr. Meherali Mollah (Ward No. 3); Mr. Taher Molla and Mr. Nurul Huq Mali (Ward No. 4) and Dr. S. M. Abdul Kabir and Mr. Sibkristo Nasker (Ward No. 5).

MUNSHIGANJ WATER WORKS

The Government of Bengal has, it is learnt, agreed to bear one-thrid of the cost of the scheme for new water works at Munshiganj.

The scheme, which is estimated to cost Rs. 85,000, has been under consideration for the past two years. The District Board of Dacca and two zemindars of Bhagyakul have promised to contribute a large sum towards the cost and several rate payers of Munshiganj have paid about Rs. 4,000 for house connections.

The present water works, which were constructed in 1908, are inadequate to cope with the town's growing demands.

MADRAS CORPORATION AND KHADI

Khadi supply to the employees of the Madras Corporation is to be discontinued as the result of a resolution adopted by the City Council. In its place mill cloth is to be supplied. The resolution was adopted by 18 votes against 11.

Mr. C. Basudev, the Mayor, has issued a note in this connection saying that "Khadi has been found to be not only uneconomical, but unsuitable for rough wear and that the Corporation peons and other employees have objected to the compulsory use of this unsuitable cloth".

The City Council also refused to sanction the contribution for teaching Hindi in Corporation schools.

LITERACY DRIVE IN BENGAL

Speaking on adult education at the Education Week, Mr. H. M. S. Jahaque, Director of Rural Reconstruction, revealed [illegible] year plan of educating all the illiterate adults of the province by starting 100,000 schools at a [illegible] cost of Rs. 60 lakhs of which Rs. 12 lakhs were expected to be contributed by the Government.

He said that on the question of control of adult education, the general view was that it should be vested in the Education Department as these adult schools should be manned by teachers of primary schools as a rule.

Mr. A. Wadud, District Inspector of Schools, Jalpaiguri, suggested that the financial problem could be solved to a great extent by enlarging the scope of Section 2 of the Bengal Primary Education Act of 1930, with a view to bringing the elementary education of illiterate adults within the purview of the Primary Education Act.

RANGOON MUNICIPAL BILL

The House of Representatives, Burma, accepted the Senate's amendment to the City of Rangoon Municipal Amendment Bill, increasing Burmese representation on the Corporation to 50 per cent.

Mr. S. A. S. Tyabji's amendment suggesting reduction of Burmese seats from 20 to 18 and providing for increased Indian representation was rejected.

Mr. J. I. Nelson, Leader of the European Group, opposing the Bill, observed that the Burma Act had provided for the protection of minorities, but the Bill took away that right.

The House also passed the Burma Shops Bill, fixing a 54-hour week and providing for a weekly holiday for employees.

CAWNPORE MUNICIPAL ELECTION

Haji Muhammad Sami has been elected Senior Vice-Chairman of the Cawnpore Municipal Board. Mr. Harishankar Bagla was elected Junior Vice-Chairman.

The following have been elected Chairmen of the various Committees :—

Lala Chhangamal—Finance; Mr. Bakhatnarain—Education; Mr. T. C. Kureel—Town Improvement; Haji Qamruddin—Public Health; Mr. Wahidahmad—Public Works; Mr. Mustafa Husain Naiyar—City Tax; Mr. Dwarkaprasad Sing—Water Works; Mr. Maheshwariprasad Nigam—Conservancy; Mr. Phullidas—Road and Pavement; Dr. Premnarain—Civil Lines Tax; Mr. Guruprasad Kapor—Park and Arboriculture; Mr. Shivnarain Vaid—Burning Ghat; Mr. Syedali Zaid—Muslim Grave-yard; and Mr. Maheshwariprasad Nigam—School Committee.

MADRAS MAYOR ON CONGRESS FLAG

Mr. C. Basudev, Mayor, refering to the proposal to remove the Congress flag from the Corporation building in a Press statement says :—"I may inform my friends there is nothing strange and unusual if the tri-colour flag which is flown

tially a flag of the Congress party, is removed from a place in which the Congress party has not only ceased to be in power but has also ceased to function."

He adds: "Until and unless a flag designed and accepted by all the various important political parties and sections in the country comes into being, no one has a right to call any flag the national flag".

SYLHET MUNICIPAL BOARD

The Assam Government have decided that, on the expiry of the period of supersession now extended up to June 24, by a Government Order, the Sylhet Municipal Board shall be re-established with 16 elected and four nominated members.

For the purpose of reconstituting the Board the Deputy Commissioner of Sylhet has been directed to take immediate steps to hold the general election.

Announcing this decision a Government resolution states:—

"The Government desire in view of the previous history of the municipal administration at Sylhet which led to the supersession of the Board, to convey a warning to the rate-payers and to make clear to them that should the municipal affairs of the town again fall into confusion the Government will not hesitate to supersede the board for a second term, possibly for a longer period. The Government hope that the newly-constituted board will be alive to their responsibilities and will maintain the administrative efficiency that has been restored during the period of supersession."

PATNA CITY MUNICIPALITY

The question of the election of new Chairman for the Patna City Municipality continues to exercise the minds of the municipal commissioners

Twenty municipal commissioners held a meeting and approached Nawab S. M. Mehdi with a request that he should consent to re-election as Chairman. Nawab Mehdi, who is a member of the Moslem League, thanked them for their offer but declined to seek re-election, as it would be against the mandate of the Moslem League which had boycotted the civic elections.

The Governor of Bihar has appointed the following to be Commissioners of the Patna City Municipality:—

The Sub-divisional Officer, Patna City (*ex-officio*); Mrs. Sushama Sen (wife of Dr. P. K. Sen); Mr. Jogeshwar Ram, Maulavi Shafiqur Rahman; Rai Sahib Sri Narayan Arora; Mr. Shakambharn Nandan; Mr. Shah Rafiuddin, B.L., and Mr. S. Tajammul Hussain, M.L.A.

ON THE BASIS OF JOINT ELECTORATES

Shikarpur, the home town of Premier Khan Bahadur Allah Baksh, will be the first municipality in the whole of India to have election on the basis of joint electorates.

Nominations have already been filed and seventeen Muslim candidates for twelve seats have filed their nomination papers despite an appeal by the Sind Muslim League to boycott the elections. Voting will take place on April 25 and 26.

Preparations for the elections under joint electorate system in other municipalities including Sukkur, Hyderabad and Jacobabad are almost completed, while the term of Mirpurkhas Municipality has been extended for the purpose of introducing joint electorate.

Sponsored by the Allah Baksh Ministry during the Budget Session in 1940, the Bill introducing joint electorates in borough municipalities in the province was passed into law by Mir Bunde Ali Ministry in the same session and it has again fallen to the lot of Khan Bahadur Allah Baksh to implement the Act.

Legal Intelligence

Re-Appointment Of Mr. J. C. Mukerjea As Chief Executive Officer

Hearing Of Injunction Petition At High Court

THE application made on behalf of plaintiffs-petitioners, Manindra Nath Banerji, Barrister and Rate-payer, and Satis Chandra Bose, Barrister and Councillor, for an injunction restraining the Corporation of Calcutta from acting in pursuance of a resolution purported to have been passed on March 31st last and from taking any steps in furtherance thereof or giving effect thereto, until the final disposal of the suit, was heard before Mr. Justice Panckridge on April 9.

In the application the plaintiffs also asked for an injunction restraining J. C. Mukerjea from acting or continuing or purporting to act as Chief Executive Officer in terms of that resolution until the disposal of the suit.

In the suit the plaintiffs asked for perpetual injunctions against the Corporation of Calcutta and J. C. Mukerjea on the above line.

After Mr. Sarat Bose had argued on behalf of the plaintiffs-petitioners, Mr. S. N. Banerjee (Sr.) began to argue the case on behalf of the defendant J. C. Mukerjea and had not finished when the further hearing of the application was adjourned by his lordship till after the reopening of the Court after Easter Holidays on Monday, April 21st next.

Mr. Sarat Bose, Mr. P. C. Basu and Mr. P. B. Mukherji appeared for the petitioners; Sir A. K. Roy (Advocate General) and Mr. S. B. Sinha for the Corporation; Mr. S. N. Banerjee and Mr. S. B. Sinha for J. C. Mukerjea. Mr. Surita, Mr. B. C. Ghose and Mr. S. P. Chowdhury for added defendant-councillors; Mr. Clough for added defendant-rate payers.

(Before Mr. Justice Panckridge)

Manindra Nath Banerjee and another

vs.

Jyotish Chandra Mukerjea and another.

Arguing on behalf of the plaintiff-petitioners, Mr. Sarat Bose said that J C Mukerjea was appointed Officiating Chief Executive Officer on December 15, 1924, and he was permanently appointed to that post on May 17, 1927, His last term expired on March 31, 1941

On 28th February last the Corporation passed a resolution appointing Mukerjea, Chief Executive Officer for a further period of two years with effect from April 1 last, but the local Government refused sanction on March 13 last On March 22 last Corporation again passed a resolution reappointing Mukerjea for two years with effect from April 1 last. In the event of Government approval not coming before April 1, Corporation also resolved then that Mukerjea was to continue as Chief Executive Officer On March 29 last the local Government refused sanction and in course of a letter Government informed the Corporation that Mukerjea could not legally function as Chief Executive Officer after 31st March without the approval of the Government to his reappointment In his affidavit in opposition Mukerjea said that this letter was received at his house at about 7-30 p.m. on March 29 but he did not vouchafe to the Court the information when this letter was delivered at the Central Municipal Office.

Mr. Justice Panckridge: What turns on that?—Mukerjea tries to make out that there was no time to convene a meeting giving 48 hours' statutory notice

Mr. Justice Panckridge: I suppose the Act does not make any provision for what is to happen if the appointment is not approved.

Corporation Administration

Mr. Bose replied that there was nothing in the Act as to what would happen if unfortunately the Chief Executive Officer for the time being died suddenly. He supposed that in that event the administration of the Corporation would be run by the Deputy Executive Officers and the heads of the departments Under the statute certain procedure had to be followed before the Chief Executive Officer could be appointed. That would take some time but during that period the administration of the Corporation had to be carried out and would be carried out by the Deputy Executive Officers and the heads of the departments. Counsel was mentioning this point because there was no answer to the question of law raised by the petitioners having regard to the wordings of the statute and different sections. Only an attempt was made to raise certain matters of prejudice and to start a bogey that there would be deadlock in the Corporation and impasse.

Counsel then said that his points were that there was no valid meeting and that there was no valid resolution Further the sanction of the local government to the continuance of Mukerjea as Chief Executive Officer had not yet been received. Mukerjea made the point in his affidavit in opposition that there was no time to comply with the rules of business. Mr. Bose's answer was that was no defence

Coming to deal with the incidents of March 31 last, Counsel said that five meetings had been called that day but in none of the agendas of those meetings was there any item relating to the appointment of the Chief Executive Officer. Under Section 60 of the Act, no business 'shall' be transacted of which notice had not been given. But what happens was that when one of those meetings was in progress at about 8 p.m. this matter was mentioned by a Councillor and other Councillors followed suit and the resolution in which J. C. Mukerjea took his stand was passed. In the meantime Mukerjea withdrew the delegation of powers, he had re-delegated to his subordinate officers. Obviously he

and that to coerce the Corporation to re-appoint him. He was the person who was trying to create a deadlock in the Corporation. When the last meeting of the Corporation was in progress on March 31, attempts were made by certain Councillors to bring forward the resolution sanctioning the continuance of J. C. Mukerjea as Chief Executive Officer until a proper meeting could be held to submit a fresh proposal to the Government. Eventually this resolution was alleged to have been passed.

This resolution, continued Mr. Bose, apart from the fact that it was not passed at any meeting of the Corporation, was bad, illegal and *ultra vires*. Under the Act Corporation could not extend the old term or continue the old term. Even if the old term could be extended or continued, there must be a definite period for which a person was appointed. In the present case Mukerjea was appointed until a fresh proposal was submitted by the Corporation to the Local Government In other words there was no definite period fixed for his appointment

Legality of Resolution

Counsel submitted that the resolution in question was bad because it offended section 51 of the Calcutta Municipal Act because it was a continuance of the old appointment and further there was no definite period fixed He had already said that no notice of the alleged resolution was given and no agenda was served relating to the appointment Further the fact remained that as soon as this question was mentioned protests were lodged by several Councillors as regards the legality of the meeting. The Mayor, apparently,—counsel did not dispute his *bona fides*,—admitted that the so called meeting was illegal, but instead of dissolving the meeting he declared that he was trying to be as illegal as possible that night The illegality of the whole proceedings admitted of no doubt. All the relevant sections, all the statutory provisions had been broken Rules of business were broken Eventually the Mayor put the resolution to vote which was carried by 39 votes to 23. two members not voting. 33 members were absent and this clearly affected the merits of the so-called appointment If a portion of the absentee members voted with the opposition, then this resolution could not have been passed, because the difference was only 16 votes. This so-called resolution was forwarded to the local Government with all due speed but the Government had not yet approved of this resolution and inspite of the fact that the Government approval had yet been forthcoming J. C Mukerjea was purporting to act as Chief Executive Officer.

After citing authorities Mr. Bose submitted that on the question of invalidity of the proceedings there was and there could be no answer at all. Mukerjea had sought to invoke the aid of Section 79 of the Act, but Counsel submitted that section had really no application. Here it was not a case of mere defect or irregularity. Assuming that it was not a case of illegality, but irregularity, he submitted there was no escape from the conclusion that this affected the merits of the case, his submission was that it was a case of an illegal act

Mr. Bose submitted that the theory of deadlock was nothing but a bogey. On the question of law he submitted that the whole proceedings of March 31 last of that so-called meeting were bad, illegal and *ultra vires* which could not be cured by the provisions of Section 79 of the Act. Counsel had made out an unanswerable case and he asked that his lordship would grant the injunction as prayed for.

Arguing on behalf of J C. Mukerjea, Mr. S. N Banerji said that in no event could an interim injunction be granted. This application was misconceived and premature. Further, under the Code the suit was not competent even now. This was a representative suit in which it was not only the plaintiffs who pretended to be interested but that such interest existed in a large class of people. Statutory notices were to be served and unless and until they go an opportunity to come in his lordship would not be in a position to say whether in truth this was really a representative suit or as the affidavit in opposition suggested this was a *mala fide* suit and the application was engineered to satisfy the private grudge of different parties Further, the plaintiffs had no interest such as would entitle them to make the suit. Further, the conduct of the plaintiffs did not entitle them to the reliefs they were claiming. Also the balance of convenience was clearly in favour of allowing the present state of things to continue Mukerjea had been functioning as Chief Executive Officer for the last 17 years and the heavens would not fall as had been suggested if he was allowed to function. Nothing had been alleged against Mukerjea except certain points of law, beyond certain vituperative epithets that he had coerced and canvassed into passing the resolution. From the affidavit in opposition it would appear that the party of which one of the plaintiffs claimed to be a member not very long ago unanimously selected Mukerjea as Chief Executive Officer to serve for this identical period in January 1940. His lordship would also see from the affidavit in opposition why this sudden change of front occurred

Question Of Law

Counsel submitted that the questions of law as formulated by Mr. Bose could not be decided off-hand, because the very questions of law which were sought to be adjudicated now would have to be adjudicated at the trial. Being a representative suit people were not only entitled to notice but they were entitled to come in and make their submissions on the questions in controversy.

Briefly dealing with the questions of law raised by the petitioners, Mr. Banerjee said that they had not even alleged any injury to themselves which must be the foundation of any application for an injunction. Further the plaintiffs had not speedier method of relief under the Act itself. It did not require an Ordinance to make a law on the subject. The law is there in the Calcutta Municipal Act, and if these powers were invoked and if the local government were of opinion that this was wrong they had got the amplest power to set aside the whole proceedings by an executive order

Mr. Banerjee submitted that facts had not been placed before the court and went on to say that at present there were four parties in the Corporation and referred to the conference between the leaders of the different parties and the Chief Minister and the Minister-in-charge of the local government. Counsel also narrated the circumstances how the conference broke down on the refusal of J. C. Mukerjea to accept less than 18 months and how ultimately J. C. Mukerjea made a statement in the Corporation accepting the post for 15 months, as suggested by the local government and eventually how this present resolution was adopted by the Corporation on the motion of Mr. W. A. Burns. On these facts Counsel asked the Court not to exercise its discretion and grant an injunction. Counsel said that Government had unmistakeably expressed their opinion that if certain things were done, if Mukerjea was appointed for 15 months, then their approval would be automatic.

Affidavit In Opposition

After placing the petition Counsel placed the affidavit in opposition of J C. Mukerjea and pointed out that under the statute the first meeting of the new Corporation was to elect its Mayor and Deputy Mayor and after that, he supposed, Corporation proposed to make the appointment of the Chief Executive Officer. The affidavit in opposition stated that Mukerjea took legal advice on the question of withdrawal of his redelegated powers to the officers and said that in doing so he had no ulterior motive. The appointment of Chief

Executive Officer was a statutory appointment and if there was no such officer there was bound to be a deadlock in the administration of the Corporation. Mukerjea claimed that he had been validly appointed by the Corporation and he was acting in anticipation of the approval of the government.

The affidavit in opposition of Mukerjea continued to say that this application was not *bona fide* He was requested by Mr. Subhas Chandra Bose, then an Alderman and later on by his brother Mr. Sarat Chandra Bose to help them in the payment of Rs. 1 lakh for the construction of a house to be called the Mahajati Sadan. They pressed him hard to release the cheque for the amount on account of the grant sanctioned by the Corporation for the purpose Mukerjea was compelled not to release the cheque as a requisition had been sent in by a number of Councillors giving notice of a motion for the rescision of the said resolution

At this stage his lordship observed that unfortunately his lordship could not hear all the parties concerned to-day. His lordship said that he was averse to granting an interlocutory injunction, adding however that his lordship had not made up his mind His lordship also observed that he did not want to refuse the application at this stage because it would not be right to do that without hearing Counsel more fully.

After some discussion in course of which Mr Bose asked for the judgment of the Court as the matter raised was of great importance, his lordship adjourned the application till Monday, April 21.

CORPORATION NOTICES—*Contd.*

Carriage and Horse Tax Etc.

1st Half-Year, 1941-42.

Owners and persons in charge of carriages, jinrickshaws, racehorses, horses, ponies or mules, are hereby informed that Section 167 (1) and (2) of the Calcutta Municipal Act, 1923, requires that a statement showing the number of vehicles and animals owned or kept in their charge, together with the tax payable, should be forwarded to the Municipal Office before the 1st May, 1941. Printed forms of such return may be obtained on application to the License Officer at the Central Municipal Office. It is further notified that failure to forward such return entails liability to prosecution and to a fine of Rs. 20. Persons, who, for the sake of convenience, prefer to make payments of taxes on the spot, may pay such amount, as may be due, to the Inspector, when he calls; he is authorised to receive money and grant license then and there. Claims for remission of tax on carriages on the ground that they were not used, will not be entertained after the 30th June, 1941.

Registration of Carts.

The half-yearly registration of carts under Section 183 of the Calcutta Municipal Act, 1923, for the current half-year begins on the 1st April, 1941. Owners of carts, including hand-carts, which are not used for the conveyance of human beings, should get them registered without delay. The fee payable for registration of every cart shall be Rs. 4. An additional charge of one rupee shall also be payable in each case for the number-plate to be affixed to the cart.

Cart Drivers' Ticket

Under Section 187 of the Act, drivers of carts are required to carry (exposed to view) a ticket granted by the Corporation bearing the registration number as driver.

Tax on Dogs

Under Section 173 of the Act, a tax at five rupees per annum is payable for every dog kept in Calcutta and the owner or person in charge is required to forward to the Municipal Office before the first day of May a list of dogs owned by him or in his charge and at the same time pay to the Corporation the tax payable in respect of every such dog. On payment of the fee, a license will be issued for the current year and a number ticket will be provided to be kept attached to the collar or otherwise suspended from the neck of the dog. Any dog which has no number ticket so attached or so suspended runs the risk of being seized or destroyed

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—
10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.
Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. , "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

Chronicle & Comment

Refuse Collection in U. S Cities

The practice of collecting refuse from the street curb in cities in the United States is, we read, often criticized on the grounds that it makes the streets unsightly, that refuse is scattered by scavengers, and that, when not properly secured, it spills and blows about. Also, containers are at times upset, either accidentally or wilfully.

Curb-collection is extensively used in American cities; but a variety of alternative methods are also in use. In New York, for example, much of the refuse is placed for collection against the front of the building. In Washington and Detroit, where alleys are wide and plentiful, the refuse is usually collected from just inside the back fence. In Rochester, it is placed at the rear of the houses, and the collectors wheel it on hand trucks to the street and return the empty containers. Even more obliging are the collectors in some sections of Pittsburgh, for they take the refuse from the cellars.

In those sections of Philadelphia which consist of solid-row houses with no alleys, the refuse must be collected from the street unless the collector enters the house. Here, however, the refuse could be placed against the building instead of at the curb, as in New York, but the time required for collection would be increased somewhat, and it is doubtful whether appearances would be much improved by this change alone. Where there is a driveway in the rear of houses suitable for a truck, collection from the rear is the custom; but it takes a lot of time and is laborious to remove refuse from narrow alleys. Nevertheless, this is done in some sections of Pittsburgh, where rubbish and wrapped garbage are bundled in burlap and taken through the alley to the street. Incidentally, Pittsburgh does not collect ashes.

SMALL-POX EPIDEMIC IN CALCUTTA
GET YOURSELF VACCINATED.

"House-holders and city refuse collectors can do much to reduce the objectionable features of curb-collection," writes *Citizens' Business*, published by the Bureau of Municipal Research, Philadelphia. "Many now do the necessary things; many do not. If each householder would put out refuse neatly, and confine it so that it would not spill or blow about, conditions would be improved. Sometimes, particularly before a week-end holiday, refuse is put out several days before it is collected; sometimes, too, containers are not taken in for days after collection. The ideal is to put out refuse just before collection, and to take in the containers immediately after. Avoiding dust and the scattering of refuse during collection, and always replacing containers carefully and neatly so as not to clutter the street or sidewalk, are things the collectors can do. By more stringent regulation of scavengers, the city authorities can prevent much of the littering."

A Grand Paradox

The city is one of the grand paradoxes of government management in America. Measured in budgetary terms, American cities and local authorities are twice as important as the States and fully as important as the Federal Government, since they spent in 1938, 7 billion dollars as against 3·5 billion dollars by the States and 6·8 billion dollars by the Federal Government. Yet, constitutionally the American cities are mere creatures of the sovereign States. They come into being, they survive or die at the whim or wish of the State; and they can do only what the States authorize them to do and only in such a manner as the law specifically prescribes. So far as the Federal Government is concerned, the term 'city' or 'local authority' or its equivalent is not even mentioned in the American Constitution, and the federal statutes must be diligently searched before mention of the word 'city' or 'local authority' may be found.

BENGAL LOCAL SELF-GOVERNMENT

Amendment Bill Passed

The Bengal Local Self-Government (Amendment) Bill, 1941, was passed by the Bengal Legislative Assembly on Wednesday last by 105 to 55 votes. The Bill was passed by the Assembly in the form in which it had emerged from the Upper House.

The Assembly was thereafter prorogued.

Opposing the final reading of the Bengal Local Self-Government (Amendment) Bill on behalf of the Congress Party, Rai Harendra Nath Chaudhury entered his "last and emphatic protest against this pernicious measure." It was on record, he said, that the Bill was being enacted not only to oust the jurisdiction of the civil courts in respect to disputes relating to District and Local Board elections but also to take away the right of appeal in such matters. He pointed out that the Bengal Municipal Act of 1932 had been put forward by the Government as a justification, for the provision of this Bill was not a 'model enactment' and as such, such an enactment should not be followed. "It is a scandalous abuse of the legislative machinery to ask the House to pass such a measure," he remarked. "Sir Bijoy is dancing to the tune of a reactionary coterie of Dacca. The Bill will not be an improvement upon the present state of things; it will be nothing but retrogression."

DRAINAGE DEPARTMENT

To All P. I. Contractors, District III And Dhappa

Re. Putting a Strong Water-hyacinth Barrier on The Bidyadhari Just About Town Outfall.

Dear Sirs,

Please submit your tender in the prescribed tender form for the petty improvement works of the Corporation for the above work, the details of which can be obtained from the department. The tender in a sealed cover, endorsed as above will be received by me on the 2nd May, 1941, at 12 noon.

The work is to be completed within fifteen days from the date of order to take up the work in hand.

P. C. BOSE,
Executive Engineer,
Drainage.

Central Municipal Office,
The 24th April, 1941.

AN OATH FOR OUR CITY FATHERS

"We believe in Our City, in the spirit of her institutions, and in the principles of freedom of thought, equality of opportunity, and sense of individual responsibility, for which she stands: and as an expression of our gratitude to those who have wrought to give us this priceless heritage, we pledge to these free institutions our allegiance and loyalty in times of peace as well as in hours of peril, and we will do all in our power to aid Our City to reach the goal visioned by our forebears."

The Engineer In War Time

FROM the ranks of civilian engineers a group that has emerged only in the last two centuries and prior to which military engineers dominated the mechanical and constructional arts, Canada is to-day drawing many of her leaders and technicians for the armed forces and the industrial home front, said Dr. T. H. Hogg, President of the Engineering Institute of Canada, in a national network broadcast inaugurating an E.I.C., raido series on "The Engineer in War Time."

Mentioning Captain Robert Davies' "gallant action in extricating the large high-explosive time bomb which momentarily threatened disaster to St. Paul's Cathedral," and Lieut.-General A. G. L. MacNaughton, who left his peace-time work as President of the National Research Council to command the C.A.S.F. overseas, as outstanding examples of the engineering profession's contributions to the armed forces, Dr. Hogg went on to point out that "hundreds of others are trying to emulate his example, using their native talents, their engineering education, and their engineering experience to further and protect our civilisation."

From a wide field in civil, mechanical, electrical, mining, and chemical engineering, "the art of directing the great sources of power in Nature for the use and convenience of man," the speaker pointed out that the profession in war is turning to a destructive end, namely, the destruction of the power of the enemy. On the home front he mentioned a civil engineer, Hon. C. D. Howe, who directs Canada's civilian army as Minister of Munitions and Supply.

In the field, he said, although war to-day is a complex economic struggle, many of the old military dictums still hold good, one being: "To win battles it is necessary to have men and materials in the right place at the right time," which entails a big engineering problem—transportation. Men must be carried by land, sea, and air, artillery (which, by propulsion, "transports" high explosives to the enemy) must be strategically located and operated, and munitions, food, gasoline, and other supplies must be continuously distributed.

"The fighting ships of to-day are themselves concentrated marvels of engineering skill, requiring for their operation and maintenance engineering ability of high order," Dr. Hogg declared, and the same is true of the Air Force, where the fine craftsmanship in the factories of Britain and America is in evidence.

"Unquestionably success in this war will largely be dependent upon the wholehearted co-operation of industry, especially the engineering industry," he emphasised. "Machines are playing a vastly more important part than ever before. It is mechanised forces that fight this war. The tank and the airplane, modern transport of all sorts, new and more costly weapons; these are the realities of to-day."

He pointed out that as far back as 1938 the professional engineering organisation of Canada, at the request of the Department of National Defence, gathered together the academic and professional records of about 10,000 engineers and trained men. Indexed and filed, he said it was invaluable

in locating technical men of the types often in demand for war work.

To engineers who might be listening to him, Dr. Hogg said in conclusion: "We cannot all remove time bombs or command armies, but in this war the civilian. . . can contribute to the common effort as never before. The engineers and technicians who form so substantial and important a part of the Canadian Active Service Forces can be relied upon to do their part. Upon the civilian engineers, who largely direct and control the vast industrial effort that may well be Canada's chief contribution to the Empire's struggle, is laid a still greater burden—greater because its acceptance is an individual responsibility.

We have to thank the *Engineering and Contract Record* of Toronto for this report.

ROAD DEVELOPMENT

New Schemes

A number of road development schemes, which are to be financed from allocations made to the provinces from the Central Road Fund, were approved by the Standing Committee for Roads at its meetings in New Delhi recently.

They included schemes for improving the surfacing of over 300 miles of arterial roads: a number of schemes for provision of dustless surfacing on short lengths of roads through urban areas; over 100 schemes for the construction or reconstruction of, or improvements to, roads and bridges in the province of Madras, the reconstruction of four bridges on the Grand Trunk Road in Bengal, and the construction of a bridge and five causeways on the Poona-Nasik and Dhulia-Edilabad roads in Bombay. The committee also approved a scheme for the construction of a road connecting the Chama-McCluskieganj Road with the McCluskieganj railway station in Bihar. This is expected to facilitate the development of the colony.

The Committee also considered the question of maintenance of roads with particular reference to future road development but postponed any conclusion pending discussion of this question by the Transport Advisory Council.

CHEQUES THROUGH ORDINARY POST

Warning To Public

The following bulletin has been issued by the Commissioner of Police, Calcutta :—

Medicines of English, German and other foreign origin believed to be stolen were recovered on searches in connection with cases of burglaries in dispensaries. Proprietors of dispensaries are requested to inspect these medicines at Lall Bazar and to establish their claims.

The public is warned against the despatch of cheques and drafts through the ordinary post. In many cases cheques were stolen and cashed. Crossed cheques were cashed through fictitious accounts opened in small banks, which in their anxiety to attract customers opened accounts without any varification or references.

The number of thefts of cycles is on the increase. 84 cycles were stolen during March. Cycles should never be left unattended on the streets or outside any premises.

CALCUTTA NEWS & VIEWS A Digest

TAGORE LAW LECTURES

Sir Allahdi Krishnaswami Iyyar, Advocate-General, Madras, has informed the University of Calcutta of his inability to deliver the Tagore Law Professorship lectures for the year 1938, which he could not deliver that year and which he was expected to do some time this year.

FOR FIGHTING AIR-RAID FIRE

As a result of the Conference held between the officials of the Government of Bengal and the Corporation of Calcutta it has been decided, it is understood, to distribute stirrup pumps for fighting fire in case it is caused as the result of air-raid for the Calcutta District No. I which is situated from Mechuabazar to the south to Shambazar. The distribution of these pumps will be for the present limited only to this district.

House lists of the district with names of the owners and occupiers to whom the pumps will be distributed are being prepared.

BENGAL INDUSTRIAL SURVEY COMMITTEE

Mr. A. R. Siddiqi, M.L.A., has been appointed a member of the Bengal Industrial Survey Committee, in place of Mr. J. G. H. Ariff, deceased.

The Bengal Industrial Survey Committee consists of fourteen members with Dr. P. N. Ghosh Chairman. It has so far submitted three reports on the marketing of cottage industries products, electrical development in Bengal and fixation of a minimum price for sugar cane in Bengal.

Six Sub-Committees of the Industrial Survey Committee are now engaged in gathering data for their reports on finance, technical education, sugar chemical industries, leather industries and sericultural industries.

MR. J. M. DATTA

Mr. Jatindra Mohan Datta, M.Sc., B.L., Secretary, All-Bengal Census Board, has been elected a Fellow of the Royal Statistical Society of London, for his valuable contribution to the study of population problems in Bengal.

He was proposed by Dr. R. A. Fisher, F.R.S., Calton Professor of Eugenics in the University of London, and seconded by Dr. Frank Yates of Rothamstead Experimental Station, England.

FIGHT AGAINST SMALL-POX AND CHOLERA

The question of introducing compulsory inoculation in the city against small-pox and cholera in order to arrest the present progressive deterioration in the health of the citizens caused by the outbreak of these two diseases in an epidemic form this year, is now engaging the attention of the Government of Bengal.

Following a recent informal discussion with the authorities of the Calcutta Corporation on the matter, the Government have asked the former to draw up a scheme incorporating all the necessary details for its execution in a big city like Calcutta, which, according to this year's census, claims a population of over 21 lakhs.

The scheme so far outlined by the Corporation is estimated to cost about 4 lakhs of rupees.

HONOURING MR. PRAMATHA CHAUDHURI

At a meeting of the friends of Mr. Pramatha Chaudhuri, (Birbal), the distinguished litterateur of Bengal, held on the 6th April last under the presidentship of Mr. Atul Chandra Gupta, it was decided to celebrate the next birthday of Mr. Chaudhuri in a befitting manner. A representative Committee with Mr. Hirendranath Datta as the president, was formed to take necessary steps in the matter.

The Committee has since met and is forming a Reception Committee, the membership subscription for which has been fixed at Rs. 3/- only. It has been decided to organise a public reception to Mr. Chaudhuri where a specially printed edition of his short stories will be presented to him. Donations and subscriptions will be received, and they may be sent to the Hooghly Bank Ltd., 48, Dharmatalla Street, Calcutta.

GOVERNOR'S CONFERENCE

His Excellency the Governor of Bengal on Tuesday morning presided at a further meeting of the Conference of political leaders.

Although certain matters remain outstanding for further discussion, agreement was reached on several points, the details of which will be published over the week-end.

The Conference appeals to the public to refrain from any action which may tend to cause communal ill-feeling, and earnestly hopes that all communities in the province will use their utmost endeavours to ensure peace and harmony, which are essential to the successful accomplishment of its work.

The following were present at the meeting of the leaders' Conference at Government House :—

Mr. A. K. Fazlul Huq, Sir B. P. Singh Roy, Mr. H. S. Suhrawardy, Mr. M. B. Mullick, Mr. Sarat Chandra Bose, Mr. Shamsuddin Ahmed, Mr. J. N. Basu, Mr. Nalini Ranjan Sarkar, Mr. Kamini Kumar Dutta, Mr. Hem Chandra Nasker and Mr. K. Shahabuddin.

A. R. P. AND HOSPITALS

In the course of a Press Note issued by the Director of Public Information it is stated that certain hospitals have been selected in the Calcutta Corporation Area and in the Howrah Municipal Area and in addition to this other hospitals in the environs of Calcutta have been chosen to provide accommodation for serious casualties. The managing committees of hospitals have been approached and they have given their most willing co-operation not only as regards taking in casualties into their own hospitals but also have consented to expand their hospitals up to a certain number of beds which have been decided upon. Arrangements have been made that on the declaration of a state of emergency, a number of beds in the hospitals will immediately be made available by allowing the convalescent and mild cases to go to their homes. The existing hospitals in Calcutta and the environs can thus provide ample beds for A. R. P. casualties and more beds could be made available by establishing New Emergency Hospitals if necessary. These New Emergency Hospitals would be established in various country houses, etc., which have been earmarked for the purpose. A scheme has been made for evacuation of cases to mofussil hospitals should this be necessary.

A Motor Ambulance Service has been organised by which casualties will be taken from the various First Aid Posts to Hospitals, the whole organisation being under the Central Control set up by A. R. P.

This scheme relies essentially on voluntary services and the response has on the whole been very good. It has proved a tax on the loyalty and co-operation of many doctors who have done well in coming forward not only to man Aid Posts but also to give necessary instruction in First Aid to the teams of the Posts.

Government have sometimes ago appointed a Special Medical Officer for A. R. P., and an additional staff was appointed recently consisting of a Chief Medical Officer, A. R. P. and 8 Regional Medical Officers who are engaged full time in developing First Aid Posts in the areas alloted to them, these areas embracing the whole of Calcutta and its surrounding Industrial Area.

FAREWELL PARTY TO RETIRING BAILIFFS.

A farewell address by the staff of the Miscellaneous Division of the Collection Department was given to Babus Kali Tanoy Mukherjee and Patit Paban Pal of the same Division, Collection Department, Calcutta Corporation under the presidency of Mr. Satish Chandra Chakrabarty, Acting Collector, at the Garden House *Basanta Kanon* of Babu Chandi Charan Sadhukhan at 47, Barrackpore Trunk Road on 20th April, 1941. Many distinguished guests graced the occasion by their presence and they were treated to a sumptuous dinner at the close of the function.

BENGALI ENCYCLOPAEDIA

An earnest appeal to the people to help in the publication of the Bengali Encyclopaedia left unfinished by Pandit Amulya Charan Vidyabhusan, scholar and linguist, was made by different speakers at the first death anniversary of Pandit Vidyabhusan held on the evening of Wednesday last at Mahabodhi Society Hall, College Square, Calcutta, Mr. Jatindra Nath Basu presided.

The President said that Amulya Charan Vidyabhusan was a versatile genius. He showed proficiency in learning languages while in school and was able to master no fewer than 26 languages of the civilised world—no mean achievement during one's short span of life. He was ignorant of academic hall-mark, nevertheless, he was a true scholar widely known for his learning and knowledge which travelled beyond the seas. He was an erudite scholar equally brilliant in philosophy, history and other branches of knowledge. In these days of acrimony if more people like Pandit Vidyabhusan were born among them peace and harmony could easily be established.

FIRST CORPORATION MEETING OF THE YEAR.

Notice Of Requisition Motion

The first meeting of the Calcutta Corporation in the current financial year will be held on April 28, for the election of the Mayor and the Deputy Mayor.

A requisition motion has been tabled by 18 Councillors of the Corporation, belonging to the different groups, for the re-affirmation of the appointment of Mr. J. C. Mukerjea, as Chief Executive Officer and for fixing his term of office at 15 months instead of two years, in view of the settlement with the Government. The requisitionists desire this motion to be taken up immediately after the election of the Mayor and Deputy Mayor.

The requisitionists are :—

Mr. N. C. Chatterjee, Mr. Sudhir Chandra Ray Chaudhuri, Mr. Bidhu Bhusan Sircar, Mr. Sudhansu Kumar Mitter, Mr. Prafulla Kumar Dutt, Haji Md. Yusuf, Mr. S. A. Habib, Mr. Abdul Matin, Mr. Haribar Das Chowdhury, Mr. Jagannath Kolay, Mr. Mohan Lal Mackar, Mr. Jogesh Chandra Ghose, Mr. Satyabrata Sen, Mr. Nuruddin Ahmed, Mr. Fakir Ch. Ghose, Mr. Sudhir K. Chatterjee, Mr. Netai Charan Paul and Syed Badrudduja.

PUBLIC RELATIONS COMMITTEE

Consequent upon taking up an appointment with the Central Board of Information, Mr. P. J. Griffiths, I.C.S., (Retired), M.L.A., has resigned the Chairmanship of the Public Relations Committee, Bengal. He has been succeeded by Mr. Geoffrey W. Tyson, who had hitherto been the Deputy Chairman.

Mr. K. Shahabuddin, M.L.A., has been appointed Deputy Chairman in place of Mr. Tyson.

CIVIC NEWS FROM FAR AND NEAR

MADRAS HOME FOR BEGGARS

To deal with the beggar nuisance in the city of Madras, the Government have provided a loan of Rs. 25,000 to the Corporation for the construction of an industrial home for beggars in which mat and basket weaving will be introduced. Able-bodied men will be employed on stone breaking and such other works.

REPRESENTATION TO GANDHIJI

In view of recent happenings in the Madras Corporation, a strong representation was made to Mr. Gandhi that the resigned councillors should be permitted to stand for re-election on the Congress ticket. It is understood that Mr. Gandhi while prepared to consider the request has called for information regarding the views of local Congressmen.

SUKKUR MUNICIPAL ELECTIONS

Seventy-five nominations were filed yesterday for 34 seats in connextion with the general elections to the Sukkur Municipality under the joint-electorate system. Twenty-eight Moslems are contesting the 14 seats allotted to them. Meanwhile, the application preferred in court seeking an injunction for postponement of the elections has been adjourned till April 30.

MADRAS CORPORATION AND CONGRESS FLAG

A short notice question was put to the Mayor at last week's meeting of the City Council why the Congress tricolour flag was not flown as usual when a civic address was presented to Mr. Jinnah.

The Mayor explaining the position said that the resolution of the Council on the question required that the flag should be flown only on days when they were having meetings and as there were no meetings of the Council yesterday, the flag was not flown.

KARACHI MAYORAL ELECTION

"No member of the Karachi District Congress Committee who is a member of the Municipal Corporation shall support the Muslim League candidate for the forthcoming Karachi Mayoral Election"—this instruction is contained in a resolution passed by the Karachi District Congress Municipal Committee.

It may be mentioned that Mr. M. H. Guzdar, a prominent member of the Working Committee of the Sind Provincial Muslim League, is among the four Muslim candidates for the Mayoral Election to be held on May 6, and a number of influential Congress Corporators, including Mayor Lalji Mehotra, Mr R. K. Sidhwa, Mr. Pasaram Tilaramani and Dr. Popatlal are members of the K.D.C.C.. According to convention, the Mayoralty should now go to a Muslim.

MAYORS' PRECEDENCE

The Government of Sind has rejected a representation by the Karachi Municipal Corporation to move the Government of India to amend the Warrant of Precedence.

It is stated that the representation suggested that the warrant of precedence should be so amended that the Mayor, being the first citizen, should be given a higher place over others at public functions. The Sind Government has also declined recommendations for exempting the Mayor from personal appearance in court.

PURULIA MUNICIPAL AFFAIRS

All the Commissioners of the Purulia Municipality elected on the Congress ticket, including the President, Chairman, and Vice-Chairman, along with Mr. Manoranjan Sah, a Commissioner nominated from the Christian Community, tendered their resignations which were accepted at Special Meeting of the Municipality.

Mr. Girish Chandra Mozumdar was elected Vice-Chairman to carry on the administration for the time-being.

Of the 16 elected members, 15 belong to the Congress party.

Letters TO THE EDITOR

[The Editor does not hold himself responsible for the views expressed by the correspondents]

Making Little Children Go Down Man-Holes

To The Editor, "Calcutta Municipal Gazette."

Dear Sir,—Saintly-souled as he was, late Mr. C. F. Andrews during his life-time used to draw attention of the Corporation Authorities, through the Press regarding the cruel practice of employing little children to go down the man-holes into the Calcutta Sewers to remove the dirts therefrom and expected that the authorities concerned would consider this question from the humanitarian point of view and put a stop to this practice by adopting some other method. He is no longer in this world and it is a pity that his expectation still remains un-fulfilled.

Instances have occured in the past in which many cleaners have lost their lives by being gassed. In this connection it may not be out of place to mention that a kind-hearted gentleman of Bhowanipur, named Mr. Nafar Chandra Kundu, lost his life, several years ago, while attempting to rescue a cleaner from the manhole at Bhowanipur. A Memorial was erected which is still existing at the spot where he sacrified his life. The fact that the manholes existing in Calcutta prove from time to time death-traps to those who are employed to clean these has been well established and it is, therefore, incomprehensive how on the face of this fact the Authorities have not so far cared to put a stop to this cruel practice. Will the present Mayor kindly pay his attention to this matter and adopt such course as will enable the cleaners to carry out their jobs without the least fear of being gassed to death provided employment of some other method in this connection is deemed impossible.—Yours, etc.

Excise Duty On Tyres

To The Editor, "Calcutta Municipal Gazette."

Sir,—Appreciating that whereas all new taxations are opposed by the public at large, the wisdom of equalising the national budget cannot be underestimated and that revenue must be found to balance the India's increasing expenditure, I seek your hospitality to publish the following *anent* the current Press comments on the proposal of an excise duty on tyres.

As far as internal consumption of pneumatic tyres and tubes is concerned, the proposed excise duty can be made harmless for the rising industry by simultaneously imposing a similar custom duty of the same percentage on imported stuff. I do not think that anybody will oppose this protective measure. As the fact stands, even without the proposed excise duty, the small manufacturers are facing a hard competition against foreign manufacturers; and it is almost certain that if foreign tyres and tubes are allowed the present freedom to enter this country after the proposed excise duty is levied, the very existence of India's Rubber industry will be threatened.

Another important point that seems to have escaped attention of the proposer as well as the opposers is the immense possibility of building an Export trade on tyres and tubes; for, India is a rubber producing country and Indian Rubber is most suitable for the manufacture of tyres and tubes.

Recently, the Rubber industry has enlarged itself by leaps and bounds. The quality, now-a-days produced, can be favourably compared with foreign products of repute. Due to blockade of Germany and his possessions, the markets, which so far were in his clutches, are directing their enquiries to Indian manufacturers, certain transactions having actually taken place and the negotiations which are pending are sure to materialize. This is the time for India to capture such markets. If once the foreign trade is established, there will be no future danger of over-production as in the case of Sugar. Nobody can deny that the proposed excise duty will seriously hamper India's efforts towards exporting her tyres and tubes to foreign countries.

In war days, any effort directed towards bringing foreign currency into Empire countries, in the shape of exports of merchandise, is definitely a War-effort of superior type. Such enterprise on the part of the manufacturers should be whole-heartedly encouraged by the authorities concerned. No argument, therefore, is tenable to justify imposition of duties on export trade under present condition of the country and her tyre industry. I would even go so far as to state that had a measure like this been proposed by anybody in Britain, I am sure the proposer would have lost public confidence. Britishers are facing immense risk of life and property in order to carry on their foreign trade. They have put up a very encouraging slogan: "Britain delivers the goods". Whatever they can spare, they are exporting. I do not know why the same principle should not apply to India.

I would, therefore, urge on the relevant authorities to drop the idea of taxing Indian tyre industry. In case they are not inclined to do so even in view of the fully-justified and overwhelming opposition, I would request them to consider the advisibility of simultaneous imposition of a customs duty to an equal extent and complete exemption of exports of tyres and tubes from proposed excise duty.—Yours etc.

J. P. GUPTA,
General Manager.

WARD IV HEALTH ASSOCIATION

Annual General Meeting

The Annual General Meeting of Ward IV Health Association (6, Sukea Street), was held on the 30th March, at the Ram Mohon Library Hall at 267, Upper Circular Road. The Secretary read before the meeting his report for 1940-41.

In the course of his report he referred to the "Baby Show" conducted by the Association and in which 59 babies entered as competitors. Silver cups and medals, with certificates of honour were awarded to the first six successful competitors. Besides these, a doll, a packet of biscuit and a tin of sample barley were given to each baby attending the function. Lt.-Col. A. C. Chatterjee, Director of Public Health, Bengal, presided over the function and Mrs. A. C. Chatterjee distributed the prizes and certificates of honour. Lectures on Maternity and Child Welfare were delivered by vetern doctors, like D. N. Moitra, S. N. Das, and others.

To arouse interest in Child Welfare, the Secretary referred to the "Baby Clinic" and the "Homeopathic Department," recently opened by the Association at the Treatment Centre. Babies are examined thoroughly and the report thereof are furnished to their guardians.

On account of high percentage of death, due to Small-pox, this year, the Association had to open a Vaccination Department.

The following is a statement of account of the number of patients attended to and the report of the work done by the Association for the welfare of the Ward :—

Patients treated : New—966; old—1,174; Total—2,140. Surgical operation—1 : Injection—16; Vaccination—529. *Clinical Examination* :—Blood for W. R.—11 cases; blood—2 cases; Urine—10 cases; Sputum—1 case.

Under head "Propaganda," 22 Cinema shows and 3 Van demonstrations were held. During epidemic seasons 3,300 leaflets on health subjects were distributed amongst the public.

The Secretary then placed before the meeting the audited accounts for the year 1939-40, which were accepted. The Budget estimate for the ensuing year was also placed and passed.

Nine prominent people of the Ward were elected as Honorary Members of the Association and the following gentlemen were elected Office-bearers of the Association for the year 1941-42.

President—Prof. C. C. Bhattacharjee. *Vice Presidents*—Messrs. Ajendra Krishna Ghose, Amulya Charan Mitter, Manmatha Nath Mitter. *Secretary*—Mr. Amulya Chandra Bose. *Assistant Secretaries*—Messrs. Amal Chandra Bhattacharjee, Nilmony Das, Birendra Kumar Roy. *Treasurer*—Mr. Ananta Charan Law. *Auditors*—Messrs. G. Basu and Co. *Executive Committee*—Messrs. Moni Mohan Seal, Santosh Kumar Saha, Jatindra Nath Dutta, Provash Chandra Ghose, Bejoy Ratan Mitter, Rohini Kumar Roy, Tara Prasanna Mukherjee, Abdul Satta. *Co-opted Members*—Dr. K. P. Sarbadhikary, Kaviraj Prasuti Pr. Sen-Gupta, Mr. Kali Churn Sen.

BURRABAZAR STUDENTS

Conference Meet

"As the citizen of the future, it will be your duty to find out more, think and judge better, have clearer aims, and weigh the spiritual aims of life against the material, with greater success; to work more wisely—and to do more of it for love, love of humanity and the glory of God", thus observed Mr. Nalini Ranjan Sarker presiding over the Burrabazar District Students' Conference.

The 1st session of the Burrabazar Students' Conference commenced on Tuesday afternoon under the presidency of Mr. Nalini Ranjan Sarker at Marwari Chhatra Nivas, 150, Chittaranjan Avenue. The Conference was opened by Mr. Mulchand Agarwalla. The students' flag was hoisted by Mr. Prasanta Sanyal, Secretary of the Bengal Provincial Students' Federation. Mr. A. R. Siddiqi, Mayor of Calcutta, and Prof. Hummayun Kabir addressed the Conference and Sir Sarvapalli Radhakrishnan sent a message wishing success of the Conference.

BOYS' OWN LIBRARY

Annual General Meeting

At a general meeting of members held on Friday, the 21st March, 1941, the election of the members of the Executive Committee for the session 1941-42, has been confirmed :—*President*—Mr. J. C. Mitra, M.A., B.L., (Late Accountant-General, Bengal), *Vice-Presidents*—Dr. B. C. Mukerjee, Lt. B. K. Bose, Mr. B. K. Sett, and Mr. B. K Deb, *Secretary*—Mr. A. K. Basak, *Treasurer*—Mr. D. P. Mitra, *Librarian*—Mr. P. Sen, *Asst. Secretary*—Mr. P. C. Sett, *Asst. Treasurer*—Mr. P. Sett, *Asst. Librarians*—Messrs H. N. Gupta, B. Sircar, A. K. Chatterjee, and A. K. De, *Members*—Messrs. A. K. Banerjee, B. K. Dey. B. C. De, G. C. Dutta, J. K. De, J. K. Barat, P. K. Rudra, P. K. Sett, (*Councillor*), S. Bose, S. Guha, S. P. Dutt and S. Mitter, *Auditor*—Mr. P. Basak.

CORPORATION OF CALCUTTA

Notice To Fire Insurance Companies

Quotations which must be enclosed in sealed covers and superscribed "Quotation for....." will be received by the undersigned up to 2 p.m. on Monday, the 12th May, 1941.

Central Municipal Office, The 24th April, 1941.

BHASKAR MUKERJI, Secretary.

MODERN IDEAL HOMES FOR INDIA: By R. S. Deshpande, B.E., A.M.I.E. (Ind), *Engineer, Bombay P. W. D., Published at Saraswat Brahmin Colony, Poona, No. I.—Price Rs.* 8.

Mr. R. S. Deshpande's book is generally meant for non-technical men and particularly for prospective house-owners. Mr. Deshpande had first-hand knowledge of the requirements of an average house-owner on account of his association with the Saraswat Brahmin Colony in Poona and, therefore, his lucid discourses on the subject can be read with profit.

The volume covers the whole field of building a home, beginning with the choice of site and ending with finishing, decoration and gardening. There is also a chapter on Air-conditioning and Sound-proofing which are now-a-days considered by rich people to be essential fitments to their homes.

Of the different chapters, the most interesting is the analysis and synthesis of a modern home. Here the author has very ably explained the function of different rooms, such as cooking, dining, study, nursery, sleeping rooms, garage, etc., minimum space requirement and their respective position in relation to each other. In the chapter on interior decoration and colour scheme, the author, with the help of colour chart, has tried to explain in a non-technical way the meaning of harmony, contrast, discord, etc., and it is hoped that the readers, on a perusal of this chapter, will be able to produce a colour scheme, if not brilliant, at least a satisfactory and sober one.

The book contains 95 plans of all denominations with their estimates and photographs of the completed buildings or their perspective views. I have seen better photographs of some of the buildings as illustrated here and wish the author will make necessary changes in his next edition.

The book is well produced and the price of Rs. 8/- can be considered very moderate.

—L. K. BANERJEE, B.E., A.M.I.E.

Fisher; (5) 'Race' in Europe—Julian Huxley; (6) The Fourteen Points and the Treaty of Versailles—G. M. Cathorne-Hardy; (7) Colonies and Raw Materials—H. D. Henderson; (8) 'Living Space' and Population Problems—R. R. Kuczynski; (9) Turkey, Greece and the Eastern Mediterranean—G. F. Hudson, (10) The Danube Basin—C. A. Macartney; (11) The Dual Policy—Arthur Salter; (12) Encirclement—J. L. Brierly; (13) The Refuge Question—John Hope Simpson; (14) The Treaty of Brest-Litovsk and Germany's Eastern Policy—John W. Wheeler-Bennett; (15) Czecho-Slovakia—R. Birley; (16) Propaganda in International Politics—E. H. Carr; (17) The Blockade 1914—1919—W. Arnold Forster; (18) National Socialism and Christianity—N. Nicklam; (19) Can Germany Stand the Strain—L. P. Thompson; (20) Who Hitler Is—R. C. K. Ensor; (21) The Nazi Conception of Law—J. Walter Jones; (22) An Atlas of the War (15 maps with explanatory text): (23) The Sinews of War—Geoffrey Crowther; (24) Blockade and the Civilian Population—Sir William Beveridge; (25) Paying for the War—Geoffrey Crowther; (26) The Naval Role in Modern Warfare—Admiral Sir Herbert Richmond; (27) The Baltic—J. Hampden Jackson; (28) Britain's Air Power—E. Colston Shepherd—Price 3d. nett each

To the general readers in English Messrs. Oxford University Press are doing an invaluable service with their Oxford Pamphlets on World Affairs. In a nutshell is presented in each pamphlet, priced only 6d., a distinct question of world importance. The booklet cannot, and does not, claim to be exhaustive; but the writer is an expert on the subject he presents, and the treatment is thoroughly lucid and informative. Thus, the general reader gets acquainted with the questions that agitate the world, and the questions already cover a very wide field. Alfred Zimmerin may be said to introduce the series appropriately with the Prospects of Civilisation; and the concrete problems and the crisis of that civilisation then are presented by a continued series of pamphlets. About 30 of them are already available and amongst them are such intersting and informative ones as "Turkey, Greece and Eastern Mediterranean" by G. F. Hudson, "The Sinews of War" by Geoffrey Crowthor, "Britain's Air Power" by E. Colston Shepherd, etc. The pamphlets, we might presume, give a mar that amount of information, which enable him to follow world affairs intelligently.

MILADUN-NABI

Corporation Muslim Union Celebrates

Under the auspices of the Muslim Union, Calcutta Corporation, the Miladun-Nabi was celebrated on Friday, the 18th April, 1941, at the Central Municipal Office.

The ceremony was laregely attended by Muslim and Non-Muslim Councillors and officers prominent among them being Mr. A. R. Siddiqi (Mayor), Mr. Phanindra Nath Brahma (Deputy Mayor), Mr. B. C. Chatterji, Mr. Satish Chandra Bose, Mr. Naresh Nath Mookerjee, Mr. Debabrata Mukherji, Mr. Bejoy Kumar Banerji, Mr. Anukul Chandra Das, Mr. C. C. Griffiths, Mr. Mohammad Rafique, Mr. Syed Badruduzza, Mr. Ziauddin Ahmed, Dr. Abdul Ahsan, Mr. S. A. Habib, Mr. A. Matin, Hazi Md. Yusuf, Mr. S. M. Yakub, Mr. S. C. Chakravarti, Mr. D. N. Ganguli, Mr. Nabi Buksh, and Dr. M. U. Ahmed

The function began in all solemnity with milad shariff described in Arabi by the Imam of Tipu Sultan's mosque. After a recital of a 'Naat' in Urdu in praise of the Prophet, speeches were delivered in English by Mr. Syed Badruduzza. Mr. B. C. Chatterji and Mr. A. R. Siddiqi dwelling on the life and teachings of the Holy Prophet of Islam. Gentlemen present were treated to Sharbat and sweets.

Legal Intelligence

Re-Appointment Of Mr. J. C. Mukerjea As Chief Executive Officer

Interim Injunction Not Granted By High Court

AFTER two days' hearing, Mr. Justice Panckridge in the House, announced, on Tuesday, the 22nd April, his decision not to issue an interim injunction on the application made on behalf of Manindra Nath Banerjee and Satish Chandra Bose, a Councillor, for a temporary injunction restraining the Corporation of Calcutta from acting in pursuance of a resolution purported to have been passed on March 31 last and from taking any steps in furtherance thereof or giving effect thereto until the disposal of the suit. In the application the plaintiffs had also asked for an injunction restraining J. C. Mukerjea from acting or continuing or purporting to act as Chief Executive Officer in terms of that resolution until the disposal of the suit.

(Before Mr. Justice Panckridge)

Manindra Nath Banerjee and another

vs.

Jyotish Chandra Mukerjea and another.

MONDAY, THE 21ST APRIL

The hearing was resumed of the application made on behalf of Manindra Nath Banerjee, Barrister and rate-payer, and Satish Chandra Bose, Barrister and Councillor, for an *interim* injunction restraining the Corporation of Calcutta from acting in pursuance of a resolution purported to have been passed on March 31, last and from taking any steps in furtherance thereof or giving effect thereto until the disposal of the suit.

The plaintiffs also asked for an injunction restraining Mr. J. C. Mukerjea from acting or continuing or purporting to act as Chief Executive Officer in terms of that resolution until the disposal of the suit.

In the suit the plaintiffs asked for perpetual injunction against the Corporation of Calcutta and Mr. J. C. Mukerjea on similar lines.

Mr. Sarat Bose, Mr. P. C. Basu and Mr. P. B. Mukherjee appeared for the plaintiffs; Mr. S. N. Banerjee, (Sr.) and Mr. S. B. Sinha for defendant, Mr. J. C. Mukerjea; Sir A. K. Roy, (Advocate-General), and Mr. S. B. Sinha for defendant Corporation; Mr. Surita, Mr. B. C. Ghose and Mr. S. P. Chowdhury for added defendant-Councillors; Mr. Clough for added defendant rate-payers.

Arguing on behalf of Mr. J. C. Mukerjea, Mr. S. N. Banerjee submitted that no temporary injunction should be granted. There was no impelling reason why the Court should be asked to stop Mr. Mukerjea from functioning as Chief Executive Officer, when the Local Government had ample powers under the Act to do that summarily. Why, at the instance of Mr. Satish Chandra Bose, who voted against Mr. Mukerjea's appointment, in spite of the party mandate, and why, at the instance of another gentleman, should this Court interfere in this matter when it would appear that nine Councillors who had been added as party defendants were opposing this injunction? In essence, for all practical purposes, it still remained a personal fight between certain members of the Bose family and Mr. J. C. Mukerjea. No other Councillors had come forward to make an affidavit in support of this application. On the question of balance of convenience, Mr. Banerjee asked the Court not to grant an *interim* injunction.

Mr. Banerjee then placed the concluding portion of the affidavit in opposition of J. C. Mukerjea and referred to the controversy over the payment of Rs. 1 lakh in connection with the construction of a house for the "Mahajati Sadan" and explained how, eventually, a representative suit was filed and an injunction issued by the High Court restraining the Corporation from paying the money. Counsel said that that injunction was continuing with the result that no money had been paid. Later the premises had been attached, owing to the disappearance of Mr. Subhas Chandra Bose, and the Chief Executive Officer had been appointed its Receiver by the Criminal Court.

Mr. Banerjee then read the affidavit in opposition of Councillor Jogesh Chandra Ghose, who had been added as a defendant. The affidavit stated that the suit in question was against the interest of the rate-payers.

Mr. Banerjee, in this connection, referred to the Conference held on March 31 last, between the Chief Minister and the Minister for Local Self-Government on the one hand and various party leaders in the Corporation on the other to discuss the question of appointment of the Chief Executive Officer. He also recalled how on the return of the Mayor and other party leaders from the Conference to the Corporation, the question came to be discussed in the Corporation and how ultimately the present resolution relating to the appointment of J. C. Mukerjea as Chief Executive Officer came to be made, pending consideration of a resolution for his appointment for 15 months at a proper meeting.

His lordship remarked that the point was that there was no resolution now appointing J. C. Mukerjea for 15 months, and inquired whether a requisition had gone in for the purpose.

Mr. Banerjee replied that in compliance with the provisions of the Act the Mayor had called a meeting for April 28, for the election of the Mayor and the Deputy Mayor.

Counsel said that under the Act the election of the Mayor and the Deputy Mayor should take place at the first meeting of the Corporation every year in April and until that was done no requisition meeting could be called.

His lordship said that there was nothing in the Act to prevent Councillors in the transition stage from submitting a requisition for the purpose. His lordship inquired if there was anything to prevent Councillors from giving notice of a resolution to be passed at that meeting.

The Advocate-General replied that personally, he did not see any objection so far as the Act was concerned. He thought that there was nothing to stop this matter being brought up immediately after the election of the Mayor and the Deputy Mayor.

Mr. Banerjee said that the Mayor had called a meeting for April 28, next and within a week or so a final decision would be reached. Further, the Government had ample powers under the Act to mullify this decision but up till now the Local Government had not done anything. Then it would appear that the Minister for Local Self-Government with the concurrence of the Chief Minister, was agreeable to have J. C. Mukerjea in office for 15 months. The question was one of form. The resolution was passed by 39 votes to 23 but not a single Councillor (except one of the plaintiffs) had come forward to make an affidavit in support of this application. It was not a question whether it was *ultra vires* for the Corporation to make the appointment but whether the powers were exercised in a proper way. On the question of balance of convenience, no *interim* injunction should be granted. If the injunction was granted, the situation would remain as it was.

On behalf of the Corporation,, Sir A. K. Roy said that he was not going to argue the question of law. The idea underlying a temporary injunction was to preserve the *status quo*, and that was what his lordship was asked to do.

The Advocate-General argued, that however strong a case might be made on its merits, the court could not be asked to grant a temporary injunction because such injunction could only be granted if it was satisfied that there would be some violation of the rights of the plaintiffs and that they would be put into difficulties. Here no question arose of any injury, irreparable or otherwise, to the plaintiffs. Mukerjea had been the Chief Executive Officer for 17 years and public interests demanded his continuance as such should not be interfered with on an application for temporary injunction. There was no suggestion that Mukerjea was doing anything rash or improper. Further, his lordship would have to consider whether this was *bona fide* suit. Having regard to the balance of convenience, in this case, his lordship would not grant a temporary injunction.

Mr. B. C. Ghose, on behalf of added defendant-rate-payers, said that allowing Mr. J. C. Mukerjea to continue until the position was rectified in the course of another 8 or 10 days was the balance of convenience and, therefore, his lordship should refuse the injunction requested. Secondly to suspend the matter might bring about a deadlock until a substitute for Mr. Mukerjea was appointed which could not be, before the next meeting. Thirdly, it was a moot point whether it was a representative suit or a personal suit. In these circumstances it was not expedient to grant an injunction.

Mr. Clough for the added rate-payers-defendants submitted that the application was not *bona fide*. The objection was purely an objection in "form," not an objection as regards "substance." The real objection on the part of the Government was with regard to the period of appointment. If the real objection had been known earlier the Corporation might have passed a proper resolution appointing Mukerjea for fifteen months.

In his reply, Mr. Sarat Bose submitted that none of the defendants had dealt with the law in this case. The Advocate-General did not say one word on the points of law raised by him, nor did Mr. Ghose or Mr. Clough. Referring to Mr. Banerjee's contentions, Mr. Bose said that he (Mr. Banerjee) had argued, for some inexplicable reason, that an *interim* injunction could not be granted in this case and that such an injunction should not be granted on the ground of balance of convenience. Mr. Bose submitted that after dealing with the points of law he would deal with the allegations of vendetta—"malice" etc.—that had been suggested to exist. Section 60 of the Calcutta Municipal Act dealt with what should be done before any matter could be considered at a meeting of the Corporation and in Mr. Banerjee's submission the directions contained therein were only "directory." He had relied on 21 Lah. 649 and had quoted the judgment of the Chief Justice in that case to show that the word "shall," in all cases, was not meant to be imperative. Mr. Bose remarked that it was unfortunate that Section 99 had not been quoted in that judgment and urged that in the above case "all" the members of the Committee were present at the meeting in question, which had cured the irregularity. But, in the present case, all the Councillors were not present. Mr. Banerjee had also relied on 67 I.A. 464, but Mr. Bose submitted that this case did not touch the real point that had been raised in the present suit.

Mr. Bose had not concluded when the Court rose for the day.

TUESDAY, THE 22ND APRIL

The hearing of the case being resumed, the Advocate-General informed the Court that since Monday afternoon a requisition had been sent for the consideration of this matter relating to the appointment of the Chief Executive Officer at the first meeting of the Corporation to be held on April 28 next. A copy of the requisition was later handed to the Court.

Arguing on behalf of the plaintiffs in support of the application for an *interim* injunction, Mr. Sarat Bose said that while not attempting to answer points of law, Mr. Banerjee had tried to draw a harrowing picture of what would happen if Mukerjea was restrained from acting as the Chief Executive Officer. It had been said that there were a lacuna in the Calcutta Municipal Act in that it did not provide for an emergency. Counsel said that there was no such lacuna in the Act. Section 2 (5) clearly laid down that the local Government might, by a notification in the *Gazette*, appoint a person to perform duties which were conferred or imposed on the Chief Executive Officer until that Officer was appointed under Section 51 (1) of the Act. That was a complete answer to any suggestion that a deadlock or public inconvenience would be caused if Mukerjea was restrained. That section contemplated a position where there had been a failure to appoint the Executive Officer under Section 51 (1) of the Act. Once it was held that the resolution of March 31, was illegal, the proper authorities would exercise the powers conferred on them by statute.

Counsel then referred to the requisition for the consideration of the appointment of the Chief Executive Officer and said that, apparently, that had been done in the light of the discussion that had taken place in Court on Monday. The requisition motion sought to reaffirm the resolutions passed on February 28 and March 22 whereby Mukerjea was reappointed. But these resolutions were "dead resolutions" as the local Government had refused to sanction the appointment of Mukerjea on the basis of these two resolutions. Then the requisition motion referred to the settlement arrived at with the Government on March 31 by virtue of which they waited to fix the period of office of Mukerjea for 15 months with effect from April 1 last. There was an implied admission here, because the requisition did not refer to the resolution of March 31 last. When the requisition motion was talked of "in view of settlement with the Government," an erroneous statement was made. Mukerjea, by his subsequent acceptance of the term of 15 months, could not revive the Conference which came to no decision as he would not then have anything less than 18 months.

His lordship remarked that he gathered there was no contract between Government and the Corporation or between Mukerjea and the Government that the appointment for 15 months would be sanctioned. His lordship, however, could not imagine that Government would not

implement what they said or that Mukerjea would not carry out his undertaking to accept a shorter term.

Mr. Bose replied that the difficulty was that there was no proposal emanating from the Government. Certain proposals were discussed and the Ministers made it clear that they were expressing their own views and would not bind the Government, there was a proposal for a period of 18 months which was turned down Then there was a proposal for a 15 months' period and it was said, Government would consider it if Mukerjea would unconditionally cancel the withdrawal of the delegation of powers to the various departmental heads.

Mr. Justice Panckridge That has been done.

Mr Bose But not in the manner demanded The Mayor had said so in his speech as will appear from the minutes of the proceedings of March 31 last Then there was a further difficulty about the requisition It was suggested that all that would have to be done was to pass a resolution on April 28 next, but it could not be done that day

Mr Justice Panckridge Why not?

Mr Bose replied that this was a fresh appointment and under the Rules of Business (Rule 19(a)), such statutory appointments were to come through the Services Committee which would have to be reconstituted Even if the proceedings of the old Services Committee were to be taken into consideration as the basis of the appointment, then, the only proposition that could be considered on April 28 was to fix a day for the appointment or to adjourn the matter In any case the resolution could not be passed on April 28 Submitting that the resolution passed on March 31 last, was clearly illegal, Mr Bose said that the question of convenience or inconvenience did not arise

Arguing on the question of law Mr. Bose referred to five cases on the question of notice where it had been held that the absence of proper notice had vitiated the whole proceedings. He then dealt with the various points made by Mr Banerjee

His lordship said that he had decided not to issue an *interim* injunction and that he would deliver his judgment stating reasons, later on

STUDENTS' UNITY

All-India Convention In Calcutta

A stirring call for unity in the ranks of students was made by different speakers at the All-India Students' Unity Convention which met for a two-day session at the Calcutta University Institute Hall on Thursday evening. Mr. Niharendu Dutt-Mazumdar, M.L.A., inaugurated the convention while a presidium consisting of student representatives from four provinces conducted the deliberations.

Delegates from different provinces and districts of Bengal, numbering about 500, attended the convention Among the delegates there was a fair number of girl students.

In a message to the convention, Sj. Sarat Chandra Bose asked the students to rise up in protest, not only against disunity, but also against those outworn creeds that sought to divide India on the false criterion of dogmas and creeds

"India is neither Hindu nor Moslem," he said, "she belongs to all Indians. There must never be a Moslem India standing face to face with a Hindu India. Do not allow yourselves to be lured into the fatal error of looking upon a part of India as the land of Muslims or another part as the land of the Hindus whatever be the temptation or provocation."

THE Improvement Trust

The following extracts are taken from the Proceedings of the Calcutta Improvement Trust, held on Saturday, the 22nd February, 1941 :—

Present :—Mr. C. W. Gurner, *Chairman*; Mr Abdur Rahman Siddiqi; Rai Sahib Chandan Mul Karnani, Mrs. Hasina Murshed; Mr. Sudhir Chandra Ray Chaudhuri; Mr J J N Birch; Mr Md Rafique; Mr. F Rooney; Sir Hari Sanker Paul, KT

They further *resolved* that specifications for Scheme No XLIX be altered to provide for 18 inches Filtered Water Main and that the Corporation be asked whether they will meet the extra cost of diameter in excess of the requirements of the scheme

Taken Over From The Corporation

The Board considered the resolution of the Works Standing Committee of the Calcutta Corporation of 6th December, 1940, regarding the taking over, under Section 65 of the Calcutta Improvement Act, of Scheme No XLVI (from Strand Road to Port Trust Railway), as forwarded by the Chief Executive Officer with his letter No. S.3916 dated the 16th/17th December, 1940, and *resolved* that the conditions laid down therein should be accepted with the exception of condition No. 9

As regards condition No. 9, the Board *resolved* that they could not consider esurfacing with 3 inches stone metal to be a reasonable requirement in addition to liability to paving with 7 inches thick cement concrete when called on to do so and requested the Corporation to waive this condition.

Gariahat Road Tramways

The Board considered the Chief Engineer's note of the 20th February, 1941, and approved of the plans forwarded by the Calcutta Tramways Company, Limited showing the proposed tram tracks, in Scheme No XLVIII (Old Ballygunge Road and Gariahat Road Widening).

ALIGNMENTS ABANDONED

The Board considered the following note from the Chief Valuer dated the 14th February, 1941, and resolved that the alignments referred to therein should be abandoned

Alignment No I

This alignment laid down a 100 foot roadway from Beadon Street to Shambazar and was sanctioned by Government on the 17th July, 1917

The southern portion of this alignment has been converted into Scheme No VIIH (Beadon Street to Grey Street), and the northern portion has been converted into Scheme No. VII-J (Grey Street to Shambazar).

The whole of this alignment should now be abandoned by the Trust.

Alignment No. XII

This alignment laid down a 100-foot and 120-foot roadway for Ballygunge Main Road and extended from Ekdalia Road to Jhautola Road. The alignment was sanctioned by Government on the 22nd March, 1918.

The southern portion extending from Ekdalia Road to Ballygunge Store Road has been converted into Scheme No. XLVIII, and the northern portion extending from Ballygunge Store Road to Jhautola Road has been converted into Scheme No. VIIIC.

The whole of this alignment should now be abandoned by the Trust.

Alignment No. XIII

This alignment laid down an 84-foot roadway extending in a westerly direction from Central Avenue to the Port

Commissioners' land west of Strand Road. The alignment was sanctioned by Government on the 18th August, 1917.

The eastern end extending from Central Avenue to Chitpore Road has been converted into Scheme No. VIIF. The next portion from Chitpore Road to Strand Road has been converted into Scheme No. VIIG, and the westerly end from Strand Road has been converted into Scheme No. XLVI.

The whole of this alignment should now be abandoned by the Trust.

ALIGNMENT No. XX

This alignment laid down an 84-foot roaway extending from Central Avenue to Cornwallis Street and was sanctioned by Government on the 11th July, 1917.

The whole of this alignment has been converted into Scheme No. XXXVII, and should now be abondoned by the Trust.

ALIGNMENT No. XXI.

This alignment laid down an 84-foot roadway extending from Central Avenue to Upper Chitpore Road and was sanctioned by Government on the 7th February, 1918.

The portion of the alignment extending from Grey Street to Central Avenue has been converted into Scheme No. VIIJ. The portion of the alignment between Grey Street and Upper Chitpore Road has been converted into Scheme No. XLIV.

The whole of this alignment should now be abandoned by the Trust.

ALIGNMENT No. XLII.

This alignment laid down a 40-foot roadway extending from Dharamtala Street to Prinsep Street and was sanctioned by Government on the 22nd March, 1922.

The whole of this alignment has been converted into Scheme No. XLI, and should now be abandoned by the Trust.

ALIGNMENT No. XLVII

This alignment laid down a 60-foot roadway extending from Southern Avenue to Rash Behari Avenue and was sanctioned by Government on the 19th March, 1931.

The whole of this alignment has been converted into Scheme No. XLVII, and should now be abandoned by the Trust.

ALIGNMENT No. XLI.

This alignment laid down a 150-foot roadway extending from Russa Road South to Gariahat Road and was sanctioned by Government on the 17th December, 1921.

The portion of the roadway from Russa Road South to Lansdowne Road Extension has been converted into Scheme No XXXIII, and the remaining portion extending to Gariahat Road has been converted into Scheme No. XLVII.

The whole of this alignment should now be abandoned by the Trust.

ALIGNMENT No. I—COSSIPORE

This alignment laid down a 60-foot roadway extending from Belgachia Road to Cossipore-Chitpore Open Space and was sanctioned by Government on the 6th February, 1924.

The whole of this alignment has been converted into Scheme No. XXIX, and should now be abandoned by the Trust.

HOUSE DRAINAGE—NEW CONNECTIONS.

The following house drainage plans showing new sewer connections have been sanctioned during the period up to 19th April, 1941.

CORPORATION NOTICES

To Contractors

Tenders are invited in duplicate for the following and will be received by the First Deputy Executive Officer on the date noted for each, up to 2 p.m. Each tender in duplicate must be enclosed in a sealed cover and superscribed—"Tender for....." For specifications and tender forms apply to the Keeper of Records between 11 a.m. and 3 p.m. on week days and 11 a.m. and 1 p.m. on Saturdays. Price Rs. 2 per set.

1. Supply and delivery of registers for house water meters.

2. Construction of a building for Primary School at Ibrahim Road.

3. Construction of a building for Primary School at Samsul Huda Road.

4 Construction of a building for Primary School at Dilkhusa Street.

5. Construction of a building for Primary School at Harish Mukherjee Street.

6. Constructing a new 50-ton water Barge

7. Laying of 60 in., 54 in. and 45 in. steel pipes, supplying and laying of 60 in., 54 in., 45 in. steel specials, supplying of 60 in. steel pipes etc., in Grey Street extension.

8. Cutting and restoring trenches in public roads for laying water mains during 1941-42.

9 Supply of kerb and channel stones during 1941-42.

10. Supply of stone-setts during 1941-42.

11. Supply and delivery of 4 miles, 18 lbs. rail, 2 ft. gauge, tipping wagons, cast steel wheels, etc., at Pulta Pumping Station.

12. Removal of the Refuse Platform from its present site at Chingrihatta to Dhappa Emergency Area.

Tenders for 1 will be opened on 29th April, for 2 to 5 on 30th April, for 6 and 7 on 2nd May, for 8 on 7th May, for 9 and 10 on 8th May and for 11 and 12 on 13th May, 1941. The rates quoted in tenders for the above are to hold good for three months.

N.B.—All cases of delay over a fortnight in the execution of agreements in respect of works and supply of materials will be reported to the Committee and the parties will not be allowed to execute the agreements after that period without obtaining orders of the Committee.

In case a party deposits earnest money by cheque, he must deposit the cheque at least three working days before the date of opening of the tender.

The contractors should maintain an uniformity of their names and styles of business, appearing on various documents, *e.g.*, Treasurer's receipts, tender forms, agreements, licenses and bills.

Any deviation from this on the part of any contractor whenever detected, will render his tender liable for cancellation.

Where tenders are submitted by a Corporation, it should be signed by a principal officer of the Corporation or by an agent duly authorised in that behalf and be attested by a witness. Where it is submitted by a firm, it should be signed by the proprietor or one of the partners or by an agent duly authorised in that behalf by the firm and be similarly attested.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 23rd April, 1941.

Time Extended.

The 22nd April, 1941.

Street Alignment.

Notice is hereby given, under Section 302 of the Calcutta Municipal Act III (B.C.) of 1923, that the Roads and Bustees Standing Committee of the Corporation, in exercise of the powers, delegated unto them in this behalf, have considered to be expedient :—

(1) To prescribe the alignment of the narrow lane connecting Indra Biswas Road with Belgachia Road, in Ward 30 to a width of 25 ft.

(2) To cancel the eastern portion of the alignment of Park Lane failing within the C. I. T. Alignment No. XXXIII, in Ward 15, which was originally sanctioned on 10th March, 1911 by the General Committee of the Corporation as constituted under the Act III B. C. of 1899.

(3) To cancel the portion of the alignment of Machuabazar Street, in Ward 8, (affecting the Chowlia Mosque) which was originally sanctioned on the 18th March, 1910 by the General Committee of the Corporation as constituted under Act III B.C. of 1899, and to revise the same by shifting a little, towards the north.

Any person, having any objection to the above, should submit the same in writing, so as to reach the undersigned, on or before Thursday, the 22nd May, 1941.

J. C. MUKERJEA,
Chief Executive Officer.

Central Municipal Office.
The 22nd April, 1941.

Notice is hereby given under Section 310 (2) of the Calcutta Municipal Act III (B.C.) of 1923 that the Corporation, in exercise of the powers delegated unto them in this behalf, have considered it expedient to acquire, in addition to the land and building within the street alignment, the land with the building standing thereupon outside the alignment for the purpose of laying and making a 12 ft. wide street in continuation of the 12 ft. wide common passage (now public passage) through the old premises No. 5, Sevak Baidya Street (now Nos. 5/17 to 5/19, Sevak Baidya Street) to meet Ritchie Road Extension in Ward No. 27, including the recoupment of a portion of the cost to be incurred for such purpose, as delineated in the plan prepared in this behalf.

Any person, having any objection to the same, should submit it in writing, so as to reach the undersigned on or before the 24th May, 1941.

J. C. MUKERJEA,
Chief Executive Officer.

Central Municipal Office,
The 24th April, 1941.

DRAINAGE DEPARTMENT

To All P. I. Contractors, District III And Dhappa

Re. Cross-Bunding the Bidyadhary at Rajakhal

Dear Sirs,

Please submit your tender in the prescribed tender form for the petty improvement works of the Corporation for the above work, the details of which can be obtained from the department. The tender in a sealed cover, endorsed as above, will be received by me on the 30th April, 1941, at 12 noon.

The work is to be completed within 15 days from the date of order to take up the work in hand.

Yours faithfully,
P. C. BOSE,
Executive Engineer, Drainage.

Central Municipal Office.
The 22nd April, 1941.

To P. I. Contractors, District III And Dhappa

Re. Clearing Water Hyacinth And Other Weeds From The Bidyadhary Near Town Outfall.

Dear Sirs,

Please submit your tender in the prescribed tender form for the petty improvement works of the Corporation for the above work, the details of which can be obtained from the department. The tender in a sealed cover, endorsed as above will be received by me on the 30th April, 1941, at 12 noon.

The work is to be completed within 4 weeks from the date of order to take up the work in hand

Yours faithfully.
P. C. BOSE,
Executive Engineer, Drainage.

Central Municipal Office,
The 22nd April, 1941.

To P. I. Contractors, District III And Dhappa

Re. Clearing Water Hyacinth and Other Weeds From The Outer Channel Of Town Outfall.

Dear Sirs,

Please submit your tender in the prescribed tender form for the petty improvement works of the Corporation for the above work, the details of which can be obtained from the department. The tender in a sealed cover, endorsed as above, will be received by me on the 30th April, 1941, at 12 noon.

The work is to be completed within 4 weeks from the date of order to take up the work in hand.

Yours faithfully,
P. C. BOSE,
Executive Engineer, Drainage.

Central Municipal Office,
The 22nd April, 1941.

Naming of Roads.

It is proposed that the widened Kunda Chowdhury Lane (Calcutta Improvement Trust Road) connecting Gopi Krishna Pal Lane and Mathur Sen's Garden Lane and crossing Butto Kristo Paul Avenue be named as "Kali Prosanna Banerjee Lane."

Any person having any objection to the naming proposed above may state the same in writing to the undersigned on or before Thursday, the 15th May, 1941.

D. N. GANGULI.
Assessor to the Corporation.

Central Municipal Office,
The 22nd April, 1941.

S. S. Hogg Market.

To all whom it may concern, that an application has been received from Mrs. Lachmi Tirathdas for the registration of the names of Murli and Lalchand, represented by their mother and lawful guardian Mrs. Lachmi Tirathdas as occupiers in respect of Stall No. 6 in Block "A" in the Sir Stuart Hogg Market in place of their deceased father Mr. Tirathdas.

Objections, if any, to this application should be submitted to the undersigned within 15 days from date hereof.

A. QASIM,
Acting Superintendent.

S. S. Hogg Market,
The 12th March, 1941.

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—
10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.
Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges.

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.

Vol. No. XXXIII—No. 22 Total No.—772.

THE CALCUTTA MUNICIPAL GAZETTE

OFFICIAL ORGAN OF THE CORPORATION OF CALCUTTA

Saturday, 3rd May, 1941 Published Every Saturday

THE MAYORAL ELECTIONS

THE unanimous election of Mr Phanindranath Brahma as Mayor of Calcutta is an event on which both the Corporation of Calcutta and the great body of Calcutta's citizens may alike congratulate themselves. The choice has indeed been a happy one, for Mr. Brahma eminently deserves the honour and recognition that have now been conferred upon him. He has come to occupy a prominent place in the civic life of Calcutta by his hard and persevering work in the Council and Committees of the Corporation. He is fully acquainted with the day-to-day administration of the Corporation. And all this knowledge and all this experience will be at the disposal of the Corporation and the City of Calcutta when Mr. Brahma comes to occupy the Mayoral chair. This is no small gain.

Mr. Brahma, as we said on a previous occasion, is a man who has the courage of his convictions He sticks to his views with a tenacity characteristic of his vivid personality. He is a strong man and determined man, and if strength and determination, knowledge and experience have any place in civic life, Mr. Brahma's mayoralty is sure to prove a success,—a credit to him and those responsible for his election. We offer him our sincerest felicitations and a respectful welcome.

To the new Deputy Mayor we also extend a similar welcome and convey our warmest congratulations By birth and upbringing, by education and culture, by training and temperament, Mr M A. H. Ispahani is well-equipped for the office to which he has been called. He has been connected with the Corporation for a number of years and is thoroughly familiar with the working of the Corporation. Gifted with a keen intelligence, quick wit, a becoming presence and the enthusiasm of buoyant youth, Mr Hassan Ispahani will be a fitting occupant of the Deputy Mayor's chair. We wish him a very successful year of office.

We speak in no conventional sense when we say, in conclusion, that we regret to bid adieu to Mr Abdur Rahman Siddiqi, the outgoing Mayor, though our regret is tempered by the feeling that his guidance and wise counsel are available to us in his capacity of a Councillor As Mayor, Mr. Siddiqi won the esteem of all sections in the Corporation by the impartial, non-partisan and dignified way in which he conducted the business of the House He handled difficult situations in a manner which went greatly to his credit and bore eloquent testimony to his tact and persuasiveness. We shall never forget the meeting of the 31st March last. He saved the situation,—in all conscience, a most difficult and baffling one. But for his firm handling the Corporation would have been landed in a morass from which it would have been almost impossible to extricate it. But this has not been his only achievement He has taken the lead in a measure of outstanding importance—we mean the creation of the Scientific and Technical Advisory Board, which is fraught with great possibilities. His move to clean up the *bustees* and his scheme of a home for beggars in Calcutta are of no less importance. The Corporation would be removing a crying shame if it would only accept his proposals.

Contents Inside

"CLEANER CALCUTTA"

New Deputy Mayor's Broadcast

The view that the city of Calcutta was now about the worst in the whole of India was expressed by Mr. M. A. H. Ispahani, the newly-elected Deputy Mayor of the Calcutta Corporation, broadcasting from the Calcutta station of All-India-Radio on "Cleaner Calcutta" on Tuesday last.

Despite perhaps being the filthiest city in India, Calcutta's rate-payers, he pointed out, were spending no less a sum than Rs. 2,50,00,000 every year.

Mr. Ispahani reminded his listeners that Calcutta would not be judged by the roads around the Fort, the Chowringhee, Alipore or the residential area south of Park Street, but by Maniktolla, Cossipore, Pagladanga and Tiljala. Diseases and epidemics start from the last named areas and until these were improved all their efforts in improving the health of Calcutta would fail.

The speaker mentioned a few of the most serious of the dangers facing the residents of the city. They were *bustees*, dustbins, and markets.

Referring to the tuberculosis menace, Mr. Ispahani referred to the problem of smoke nuisance in the city. If the Calcutta Corporation and the Smoke Nuisance Committee launched a drive and the other private organisations in the city lent a helping hand it would not be difficult for them to force every householder to build in accordance with the standard to be laid down by the health and building experts of the Corporation in the matter of cooking ranges and *chulas*. He observed that as there was no enactment under which domestic smoke could be controlled, propaganda was necessary.

Speaking about *bustees*, Mr. Ispahani referred to the *bustee*-owners' conference called by Mr. A. R. Siddiqi, the outgoing Mayor, and stated that the Revenue Minister of Bengal had agreed to take up the improvement of the Government *bustees* as soon as the Corporation had placed before him a workable scheme. He was of the opinion that the insurance companies should form a joint building society and build tenaments and houses for the working classes out of the reserve funds at their disposal.

CALCUTTA UNIVERSITY

Industry And Commerce Museum

A proposal is afoot to name the Calcutta University Commercial Museum as the Asutosh Museum of Industry and Commerce. This name will be in consonance with the Asutosh Museum of Indian Art.

The aim of the Industrial and Commercial Museum, when reorganised, will be to promote the industrial and commercial development in the country through the exhibition of models, charts, diagrams, pictures and specimens. Such a Museum will also help students of commerce prosecuting their studies in the University.

So far, materials regarding paper, glass, textile, iron and steel, rubber, leather and ceramic industries, which are being developed in the country, have found a place at the Museum.

SPECIAL "TAGORE" FEATURE

THE PEOPLE'S HOUSE AND MUSEUM IN ANKARA

Ankara: The City Of Kemalism

By

VANGUARD

"A cloud of dust near the railway line that was how Ankara was described before the National Revolution made it the centre of Kemalism in Turkey. In twenty years Ankara has become one of the key points in international diplomacy. The rise of this small country town in Anatolia to become the capital of New Turkey is like an enchanting romance as enchanting as the transformation of Turkey itself.

Nationalist Headquarters

In 1920, when as a result of popular pressure the Sultan called the Assembly at Constantinople, Kemal urged that its place of meeting should be in the interior, preferably at Ankara, away from the range of the Allied guns. When despite of this warning, the Assembly met at Constantinople, the Allies occupied the city and tried to coerce the chosen representatives of the nation. The result was that the Sultan's prestige went down and the Assembly moved on to Ankara in April, 1920, where they decided to organise resistance. This was the turning-point of the Turkish Revolution, for it marked the end of the Sultan's influence and the beginning of Kemal's leadership. The influence of Constantinople waned so far as the internal politics of Turkey was concerned, and Ankara, standing in the heart of peasant Anatolia, embodied the achievements and aspirations of Turkish Nationalism.

Meaning Of The Name

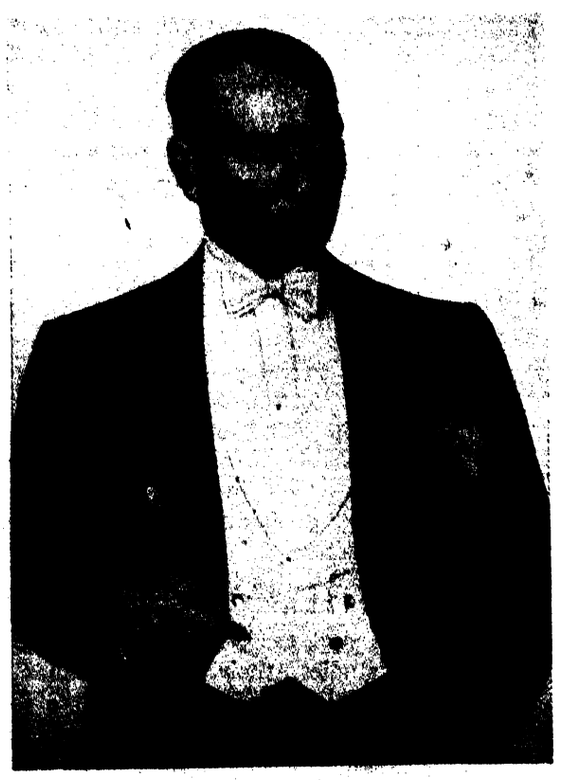
It may be of interest to explain the meaning of the name Ankara. It comes from the Greek Ankyra (Latin Ancora), which means anchor. It is a significant name, since this new capital may be regarded as the anchor for the Turkish ship of State of which the pilot was Kemal Ataturk.

The Old Town

Ankara's old town is not very different from a traditional oriental habitation. It has its cobbled streets and blind alleys, dirty shops and dingy buildings. Narrow arched gateways and crumbling walls could be seen everywhere. But here too there is the touch of the modern: here and there one finds a modern shop: a post-office and a pillar-box things which, perhaps, even to-day would surprise the men from the mountain and the desert. "Everywhere one sees what is dead and past lying side by side with what is modern and alive."

President Lived In The Railway Station

But Mustafa Kemal called the people from the old town to build up the new one on modern lines when the capital was shifted from Istanbul, many thought that the Kamalists had gone crazy in trying to build a new capital in the interior. All sorts of arguments were raised in favour of Constantinople, but the indomitable will of the Mustafa backed by a faithful band of followers overcame all opposition. "Officers, high officials, diplomats, philosophers, poets, journalists, all the *elite* of Turkey had left the tranquility of their houses and villas and gardens by the sea, their fine offices and studios, their wives, families and friends, the settled order of their lives, to follow him." A few old lime-washed buildings with wooden benches and tables became the seat of administration. Newspapers were printed in a



stable: The bureaucracy was settled in the kitchen: a class-room in the School of Agriculture was the General Headquarters: the President lived in two rooms in the Railway Station building. Thus began the functioning of the New Turkish Government.

New Town—Yeni Shehir

Soon the beginnings of the new town were made. It overstepped the limits of the plain and crawled up along the slopes of the background hills. A wide valley separated the old from the new—a valley chequered by grass-bordered streets which followed the ancient caravan routes, but now lined with a stream of fast automobiles. A number of public gardens intersect this valley, which is planned to be developed as the future industrial area of the city, with arranged sites for factories, warehouses and shops.

The residential quarter of the town is separated from the official. Groups of beautifully-planned villas decorate the slopes overlooking the plain, and the whole surrounding is lavishly adorned with gardens. The ministerial offices and government buildings are situated up on the heights, opposite the dominating citadel.

Foreign experts were called on to plan the city and its magnificent public works. The new programme of public works, which was taken up sometime back, was a very comprehensive scheme and included, among other things, sky-scrapers, a new Parliament building, a Central Railway Station, a theatre, a stadium, a race-course, new schools, the establishment of modern sewerage, the development of water supply, new traffic signals. Many of these projects have already been carried out, such as the ministerial palaces, the Government Secretariat, the stadium and the water-conduit, built by an Italian engineer. In 1937, new office buildings for the State President, the Cabinet, the Foreign Ministry and Parliament were built. The Cubuk Reservoir, which was opened in 1936, and is about 9 miles away from the city has a capacity of 17,50,000 cubic yards. Foreign engineers, mostly German, were employed in the project, but the building was a national project and was carried out as such.

THE MAKER OF ANKARA: MUSTAFA KEMAL PASHA

Education

Ankara represents all that is fine and noble in New Turkey. A backward country has been suddenly brought to the forefront of culture and enlightenment. This was possible because of the almost superhuman drive of the Kemalists. The story of Kemal's personal interest in educating the Turkish masses has passed into legend. It is here in Ankara that we see the full fruition of that policy. High up on the hill which the citadel crowns, stands a modern school, a modern, airy structure of concrete and glass. It is symbolical that a school should get the place of pre-eminence in the planning of new Ankara. Schools of all kinds are scattered all over the town—with modern, well-equipped libraries and laboratories, modern quarters and sports grounds.

The first building constructed in Ankara for teaching purposes was a training school—the *Ghazi Institute*, where the teaching *elite* is being formed. All the necessary theory of the various faculties and the latest principles of pedagogy are taught there. A modern school for girls has been started, for Ankara knows that a nation cannot be enlightened until the womanhood has been released from the shackles of age-old superstitions and ignorance. This school for girls is the famous Ismet Innenu Institute, named after the present President of the Republic. All the arts and science courses are designed with a view to making the wives and daughters of Turkey realise that the true foundations of healthy nation hood has to be built on homes which are run on sound scientific principles. Rationalism is the key note of modern Turkey whether it is in the political or social relationships.

A Higher School of Commerce is another institution which Ankara can boast about. It is not the usual type of college where theory alone is imparted, it equips its pupils with practical experiences of everyday economies. The students run among themselves various economic organisations like co-op. societies, savings banks investment concerns, and loan offices. In a word, it is a laboratory for practical economics.

A very interesting institution at Ankara is the School of Building Construction and Public Works. It is a curious building with all sorts of architectural specimens jumbled into one. "Here they build for building's sake." Here is education which supplies basic needs of an expanding state. Gone are the days of pure scholastic education, to-day in Turkey education is linked up with the needs and tasks that face the nation. One faith alone is taught in the schools, faith in the nation.

Progress In Research

But the intellectual activity of Ankara is not confined to the opening of new institutions alone. The intellectual output of these institutions show how fertile was the soil of the new nation in which the Kemalists started their work. In the School of Agriculture, problems connected with national patrimony, with the study of fauna and flora and minerals, are actively tackled. The Agriculture and Forestry Schools are at the service of the

lation, for the products of these institutions are the common property of the Anatolian peasantry.

A new Faculty of Law is of special significance since Kemal codified the law of the land. The old theocratic regime with its antiquated laws were swept aside by the wand of the magician, Ataturk, and an up-to-date code based on scientific principles has taken its place. The role of the Law Faculty has thus become extra-ordinarily important, since the laws are in the hands of these scientific experts who teach and research on law.

A School of Medicine has also gained special significance since the health of the people is a charge of the government in Turkey. Up-to-date research facilities are available there and death and disease which were of such common prevalence among the backward masses, are to-day being fought with all the weapons of science.

Ankara Calls The Women

Women in the Ottoman Empire were burdened with all the disadvantages of a backward country. They were kept behind the veils, they were ignorant and illiterate, and life for them, as it is still to-day for many of their sisters in the East, a series of humiliating burdens. The women were kept away from the world by force, "obscuring their eyes and their minds and robbing them of their movement and liberty."

THE MINISTRY OF HEALTH, ANKARA

But Ankara's call in the defence of the new Fatherland was echoed and re-echoed throughout the length and breadth of the country, and it was heard and responded to by the mothers and wives of Turkey as much as by the young feminists, waiting impatiently for the bonds to be burst asunder. They left their hearth and home and fought for their new nation, for in it, they saw a hope and a way to salvation. And then, when the war was over, Ankara called the women again to participate in the great task of national reconstruction. "The lattices were pulled down, the veils torn up, the way was open to them and they shared in the modern houses and schools, took their place in offices and banks, had equal rights with men under the modern laws, and had free access to the new learning, science and art." The centre of this liberation movement was Ankara, and from there it radiated all over the land.

People's House

In the heart of the new town, there is a group of buildings which might be regarded as a symbol for the New Turkey—the Museum and the People's House. The Museum contains collections of Turkish costumes, utensils, weapons, and specimens of folk-art. Treasures from Turkey's Hittite and Roman past are preserved here. The Museum is a recognition of the fact that Kemalist Turkey does not scrap the past just because it is the past; rather, it preserves the essence of what is great and noble in Turkey's past. The People's House is the meeting-place for the common people—large rooms for meetings and festivals, libraries and reading rooms, theatre, gymnasium, statues, paintings, collection of manuscripts, halls for concerts and exhibitions. The People's House tells us what is the future that Turkey is looking forward to—it is the future for the people in which each and every member of the nation can participate.

In front of these two buildings, one as the message of the past, and the other as the message for the future, stands a statue—an equestrain statue-dominating the whole of Ankara. It is a monument to a great leader, the Father of the Turkish nation—Kamal Ataturk.

Pyorrhoea and Dental Decay

where the food materials are lodged. By the gradual decomposition of the food materials the gum tissues are more irritated, and all kinds of microrganisms multiply enormously in those pockets. The poison secreted by these bacteria attack the tissues of the gums and after absorption in the system, produce all sorts of diseases. The incidence of Pyorrhoea and other ailments relating to the teeth and gums is more common among the middle class residing mostly in cities and towns. Two conditions are mainly responsible to effect changes in the reaction of the saliva, namely :—(1) Acidity of the stomach, and (2) Formation of Acid Phosphates in the system, which are secreted through the salivary glands of the mouth. Patients with Pyorrhoea are often given alkali, such as Milk of Magnesia, or other alkaline preparations. These, however, are only like patchwork and cannot remove the causative factor. Causes of acidity are to be removed. During investigation on the bowel complaints in this country it was found out that lack of physical exercise, excessive carbo-hydrate food and irregularity of the time of taking food are the three main causes of acidity. Curtailment of carbo-hydrate food and sweets are the primary conditions to check acidity. Sweets in empty stomach will always tend to produce acidity in people who lead sedentary lives. Unbalanced food and not always deficient nutrition is the cause of the disturbance of the digestive system.

Once Pyorrhea is established the already disturbed digestive system gets more disturbed, due to the swallowing and absorption of pus and the micro-organisms of the mouth. At that time there is no remedy which can save the teeth, but by change of diet the cause can be removed and the general health can be improved.

The necessity of the article is to impress upon the public that the appearance of bleeding gums or increase of sensitiveness of the teeth after slight acid food or fruit are signs of some abnormal change in the digestive system. If at this stage the particular digestive disturbance is cured Pyorrhoea can be averted.

HEALTH & HYGIENE

"A man too busy to take care of his health is like a mechanic too busy to take care of his tools."—*Cicero.*

Pyorrhoea And Dental Decay

A Sign Of Digestive Disturbance and Unbalanced Food

[By Dr. H. Ghosh, M.B., M.S.P.E., *Visiting Physician, Chittaranjan Hospital, Calcutta.*]

IT is generally believed that Pyorrhoea is caused by neglect of the mouth hygiene, and Pyorrhoea causes all ailments of the digestive system. There are innumerable cases, on the other hand, where inspite of taking good care of the mouth Pyorrhoea resulted. After the onset of Pyorrhoea various disturbances in the digestive system become evident, giving an impression that Pyorrhoea has caused the digestive disturbances. In lectures on hygiene of the mouth it has been so often said by responsible persons that Pyorrhoea leads to digestive disturbances. This has led the people to believe that Pyorrhoea is the cause of digestive disturbances. Scientific researches and investigations made to find out the cause of Pyorrhoea now has definitely established that it is the disturbance in the digestive system and unbalanced diet which cause Pyorrhoea and not the other way round. On this erroneous notion, people suffering from Pyorrhoea use all kinds of tooth-paste, tooth-powder and antiseptic mouth-wash, but unfortunately without any result and at last consult dentists, who have no other alternative but to pull out the teeth one after another.

While acknowledging the importance of cleanliness of the mouth and teeth, it must be borne in mind that cleanliness of the mouth alone cannot stop Pyorrhoea or other diseases of the teeth. Animals and reptiles have not to take care of the teeth or their mouths, yet their teeth last their life-time. The most important causative factor is to be sought elsewhere. In children, hygiene of the mouth is no doubt essential to avoid caries of the teeth, but wholesome food containing all the essential vitamins should be considered to be of prime importance. In children of the middle class family caries of the teeth is very common. Milk teeth show black or bluish spots inside or outside. Careful investigation of these will show that these children take sweets, candies or cakes prepared of flour at any hour of the day, and it is not possible to enforce washing or cleansing of the mouth everytime after taking some sweets or candies. The sugar or remnants of starchy food sticking in the mouth, get fermented, changing the alkaline reaction of the secretion of the mouth into acid. Acids dissolve the enamel or the outer shiny covering of the tooth thus exposing the structure just underneath to microbial infection and the resulting caries. Besides, constant acid reaction of the secretion of the mouth causes irritation and congestion of the gum tissues resulting in bleeding gums. Another factor is absence of Vitamin 'C' from the food that is given to these children. Those living in cities and towns are seldom given any fresh fruits or vegetables which contain sufficient Vitamin 'C'. It is not the cost but ignorance is the cause. There are many fruits with sufficient Vitamin 'C' contents, which can be had in plenty for one pice. Children often suffer from diarrhoea, which, in most cases, is due to faulty diet and sometimes due to infection. During each of these attacks, reaction of the secretion tends to change from normal alkaline to acid. Due to faulty or unbalanced diet, the teeth grow with such a defective chemical composition as to be easily affected by acid and bacterial toxin.

In adults and young persons the condition is somewhat different. The incidence of Pyorrhoea or dental decay is more noticeable among men living in towns and cities and leading a sedentary life. Among young men or women doing more intellectual and little physical work and taking large quantities of rice, sweets and starchy food, the incidence of dental diseases is very frequent.

There were many instances where dental diseases started after or during some acute gastro-intestinal disease.

So far as scientific observation can be made the trouble of the teeth and gums begins with the alteration of reaction and chemical constituents of the secretion of the mouth. Generally the secretion of the mouth is slightly alkaline. If, however, disturbances take place in the digestive system, there is at once change in the reaction of the saliva from alkaline to acid. Acid secretion easily dissolves the enamel or the outermost covering of the tooth, and also tends to diminish the defensive power of the mucous lining of the mouth against microbial infection. While alkaline or neutral reaction of the saliva keeps the tissues of the mouth and gums in a healthy condition, change to acid condition produces irritation of the gum tissues, resulting in congestion and bleeding. By the action of the acid the enamel is eaten away, loosening the attachment of the gum from the neck of the teeth. Due to the loosening of the attachment of the gums from the neck of the teeth slight pockets are formed

Future Buildings

AT first sight it may well appear untimely to discuss now the probable future of building. Some would say that this is a subject for post-war reconstruction and should be left alone till then. Certainly our present pre-occupation with more vital technical problems leaves little time for idle discussions; but does the title of this article fit into term "idle discussions"? No engineer or architect in any of the countries at war, with cities and towns ravaged by air attack or liable to be attacked, will agree for a moment that we can continue to ignore this very subject. Even if there was no immediate urgency, we still have to study now all aspects of future building in order to be prepared for the task ahead. In fact, elsewhere, in the countries at war the future of building is already receiving close attention. In this connection we must remember the devastation being caused to buildings of all kinds by the night bomber, the urgent need there will be for rapid reconstruction as soon as this becomes possible, the lessons to be learnt from the wholesale destruction of all types of structures, and the resulting shape of immediate building, where unavoidable, should assume. We may not feel the same urgency here at present, but what may be decided elsewhere cannot but affect our own procedure here, now and after.

It is difficult at times to reconcile the general progress in technique with the variegated structures one meets with in our towns. In spite of a multiplicity of regulations there is little of definite policy to guide those about to build. There is unhappily no settled policy as to materials, means and methods, apart from engineering principles and practice in the design of any particular structure. We have not made our minds as yet how best we can express utility, protection, and simplicity, combined with effectiveness. We are still largely experimenting with differing materials and with differing mediums. We mix wood, brick, cement and steel, unable to make up our minds whether to work with one or another and so give the right expression to each. It is a confused architecture with the result that our finest avenues present an agglomeration of buildings more often than not quite offensive to the eye and of doubtful taste and efficiency. We have not really decided in what medium we can best provide what is necessary, although from time to time we stumble by accident upon something worthwhile and more to the purpose.

War experience had now added to the confusion of ideas, for we have found that mere four walls with a roof on to give cover is not sufficient to meet modern means of destruction. It is questionable whether established use of any medium quite answers the purpose when the new factors are taken into consideration. But even without these new disturbing factors to give us a new perspective, we cannot be quite certain that some of the more or less usual means we employ are really the best after all. Take the steel-framed building, for ins-

tance. Great reliance has been placed on this type of structure so far. Yet, an examination of steel-framed buildings damaged by bombing has revealed the girders to have been subjected to corrosion and erosion, which might have reached serious proportions in the course of time. The masonry covered that up, and it would certainly have remained concealed but for the sudden displacement of the masonry by enemy action. What access is there ever provided in such buildings for inspection of the steel so covered by the masonry? It is easy, of course, to make alterations in design to meet it. We can use removable steel panels in such building to be easily removable for purposes of periodic inspection and for any remedial measures to be carried out when and where desirable. But is this the complete answer? Have we really given sufficient thought to the possibility of the use of one material only in any one building, instead of the composite structures we so much rely upon? After we have decided on the best building material for our purpose, ought we not to find means to confine ourselves to that one material right through? There may or may not be a complete answer, but ought we not to strive after one?

A building material must undergo many tests and satisfy many conditions before we can make it the standard basis on which to build, but when it does fully satisfy all our demands and conditions it should be acceptable to all. There need be no single material of the kind. If it is concrete, for instance, we find best, then let us use this material and let us learn to give shape to it for all our purposes; if, on the other hand, we find steel fully satisfying all conditions instead, then by all means let us use steel without qualification and addition of something else. We hold no brief for either or for any other that may come along. No sanctity attaches itself to any material; progressive research may at any time bring us something entirely new to replace with advantage everything we use now. But while we continue to use certain materials, let us at least become expert to operate with any one particular medium, without looking for a solution of our difficulties in the simultaneous use of several in combination. Nor are all the materials we use now with such frequency so fully tested to give us the assurance we ought to have when employed in building. This can be easily remedied, but we have to find first the right design to give expression and final shape to each of the materials we use. The conglomeration of structures we see on our streets, the various shapes and forms, the dwarf and the giant rubbing sides, the bulging and the lean, the artistic and the ugly, featured and the featureless, --all combine to cover up a lack of understanding and decision as to norm and form to be given to such structures in the design, material, utility, and expressiveness.

An advocate of metal buildings recently stated, that by means of vitreous or stove enamelling, spray painting, metal spraying or a number of other processes, any type of facing, such as brick, stone, granite, stucco, pseudo-Tudor, etc., could be reproduced on pre-formed metal sheets. While it may be true that this can be done, there is an evident playing up here to the predilections of those concerned with building in order to make the idea of all-metal buildings more palatable. From the point of view of propaganda such an approach is psychologically correct, but it is hardly a scientific approach, or the right idea, to suggest the grafting of forms belonging to different materials on to a new medium. Why not instead find the proper expression in the very medium suggested? In introducing something new, cannot we give it its own individual form corresponding to the characteristics of the material rather than attempt to disguise it? If we use a new medium we must think in the new medium. Why this chasing after characteristics belonging to quite different materials and forms relating to a past age. A good deal of spoliation and unsightliness is due to the questionable copying of a past epoch. We must not only build better, but give entirely new expression to the new materials we use, corresponding to the age we live in. The word "pseudo" is entirely wrong in this connection. Above all let us concentrate on building what is best, confining ourselves exclusively to the medium we employ. There are entirely new conditions to be fulfilled, new demands to satisfy, new features to be embodied. Town planning is the order of the day; and the aesthetic and other conditions of the true planner present problems of design and construction the engineer can solve without great difficulty. Let him be called in to deal with these problems of building now and in the future. But let us adjust our minds first to present needs and demands.—*Indian Engineering.*

MR. SUBHAS BOSE'S CASE

The case in which Mr. Subhas Chandra Bose was prosecuted under the Defence of India Rules for delivering a speech in Hindi at a public meeting at Mahammad Ali Park on the 11th April, 1940 and also in connection with the publication of an article entitled "Day of Reckoning" published in the "Forward Bloc" in its issue of the 18th May 1940, of which Mr. Bose was the Editor then, under circumstances already reported came up for hearing on the afternoon of April 26, before Khan Bahadur Wali-Ul-Islam, Additional Chief Presidency Magistrate, Northern Division Police Courts.

The Magistrate passed the following order :—

Proclamation published. Attachment orders executed. Case adjourned *sine die*. Put up after six months, if the accused does not appear before 31st October, 1941.

COUNCILLOR ARRESTED

Mr. Satish Chandra Bose, Councillor of the Calcutta Corporation and the eldest brother of Mr. Subhas Chandra Bose, his son Dhiren Bose and his nephew Ranjit Bose, were arrested by the Bhowanipore Police on April 25 on a charge of assault and wrongful confinement of a watcher of the Special Branch of the Calcutta Police on April 20. Mr. Satish Chandra Bose was later released on personal recognizance bond, while the other two were released on bail.

On the complaint of Inspector C. S. Barman, they were later prosecuted before Mr. H. C. Gupta, Additional District Magistrate of Alipore, in connection with an alleged assault on constable Abdul Bari Howladar, a watcher attached to the Special Branch of the Calcutta Police.

It was alleged that about 9-30 p.m. on April 20, Dhirendra and Ranjit assaulted the constable on Elgin Road while he was discharging his duties as a public servant. It was further alleged that the two accused wrongfully confined the constable by dragging him to a taxi and taking him to the residence of the Hon'ble Sir B. P. Singh Roy in Lansdowne Road. Mr. Satish Bose is alleged to have aided and abetted the two accused in the commission of the offences.

The accused were released on bail and the hearing was adjourned to May 8.

Mr. Hirendra Nath Bose appeared for the accused.

STUDENTS' WEEKLY SERVICE

The Diamond Jubilee of the *Chattra Samaj* (Students' Weekly Service) attached to the Sadharan Brahmo Samaj was celebrated on April 25 at the Hall of the Samaj. Dr. B. C. Roy presided.

Dr. Roy said that the students of Bengal had a lot of things to contribute to this world which was fast changing. It might be that the temporary setback had come in their onward progress of thoughts and actions. But this should not break their heart. Dr. Roy had confidence that their students would rise up again with new courage and enthusiasm and new message.

When the *Chattra Samaj* was formed, great revolutionary changes were taking place in their society. Students at that time showed immense courage and energy to go ahead. Each one of those who found the Students' Weekly Service was a bright luminary. To spread light and knowledge was their mission. Even to-day that courage, strength and enthusiasm were not lacking in the students. But their forward march seemed to have received a set-back. Their aim and outlook did not seem to be quite clear. Their efforts were ending in nothing at every step.

Enquiry into this state of affairs would reveal a great defect among the students who was responsible for their failure in their efforts. That defect was nothing but their want of judgment. The power of reasoning and judgment which was in evidence among the students about forty years back was now wanting. From clash of ideals, their devotion to a particular ideal of their own had been shaken. This was, said Dr. Roy, the only reason of the present regrettable situation.

As before, the *Chattra Samaj* would have to proceed forward with courage, determination and firm faith in their ideal. They should not yield to disappointment though they might have been suffering from temporary reverses. Let the students awake and take the front line with new courage and vision.

Mrs. Irene Roy said that in times of national emergency, it was always the students who had to bear the greatest burden. Wherever they might look, they would find the young men occupying the vanguard. She said that the youngmen here had to give something not only to India but also to the world. India's serenity, India's *Ahingsa* and India's culture, all these they had to give to the world. She firmly believed if the world was to be saved, it could de done by the fundamentals of India's culture.

She advised the students not to do anything because others had done it. They should not believe anything because it was said by their teachers and elders. They must observe and analyse everything before taking final action.

Mr. Jnananjan Neogy said that in these critical times through which they were passing, students had great responsibilities. They should remember their past history. The activities of a band of students who were inspired with lofty ideals should spur them on to translate that noble ideal into action.

Dr. Kalidas Nag also spoke :

SIR P. C. RAY AND SIR NILRATAN FELICITATED

The 80th birth-day of Sir P. C. Ray and Sir Nilratan Sircar and the 85th birth-day of Pandit Sitanath Tattvabhusan were celebrated by the *Chattra Samaj* attached to the Sadharan Brahmo Samaj on April 26.

Addresses of felicitations were presented to them at the function which was presided over by Mr. Ramananda Chatterjee. Acharya P. C. Ray and Pandit Sitanath Tattvabhusan were present at the meeting. Sir Nilratan could not be present owing to indisposition.

Mr. Ramananda Chatterjee welcoming the guests of the evening said that Pandit Sitanath was an eminent philsopher and a great devotee. The Brahmo Samaj had been immensely benefited by him. They could not forget his services.

Speaking about Sir Prafulla Chandra, Mr. Chatterjee said that he was not only a world-famous scientist, his knowledge in history, literature and philosophy also was enormous. He was undoubtedly a vastly learned man, but, above all, he was an honest and a sincere man. His services and sacrifices for the country, his untiring efforts for the welfare of the students would never be forgotten by his countrymen.

Sir Nilratan Sircar, Mr. Chatterjee said, had served the Brahmo Samaj all his life. He had also given proof of his immense love of country by helping the freedom movement since the Swadeshi days.

Mr. Chatterjee prayed to God, so that the lives of these three might be spared for many years more for the good of their country.

Dr. Sundari Mohan Das also referred to their manifold qualities of head and heart.

Pandit Sitanath Tattvabhusan gave a suitable reply.

HEALTH CAMPAIGN

The Committee of the Indian Chamber of Commerce, Calcutta have addressed a communication to the Government of Bengal regarding the necessity of disseminating knowledge in the province about nutrition value of foods and preservation of health on an organised basis. The committee point out that many of the diseases are the result of malnutrition or are due to the disregard of the principles of proper nutrition and hygiene.

The committee feel that it is necessary for this purpose to launch a well-planned health education campaign throughout the province and urge Government to place at least a lakh of rupees a year at the disposal of the Department of Public Health to enable it to carry out propaganda.

SIR SARVAPALLI RADHAKRISHNAN

The resignation of Sir S. Radhakrishnan of his office as George V Professor of Mental and Moral Philosophy with effect from 1st July, 1941, was placed before the meeting of the Senate of the Calcutta University on Saturday last. Sir Sarvapalli was appointed *Emeritus* Professor of Mental and Moral Philosophy of the University with effect from that date.

In resigning his office Sir Sarvapalli addressed the following letter to the Registrar :—

"May I request you to be so kind as to inform the Vice-Chancellor and the Sydicate, that I intend to resign my post as the George V Professor of Philosophy in the University of Calcutta with effect from the 1st of July, 1941. On this occasion I recall with gratitude the uniformly kind and generous treatment I have had for over twenty years, *i.e.*, since March, 1921, when I first took up this appointment. I feel happy that during this period it was given to me to serve this University not only as Professor but also in several other capacities, as a member of the Executive Council, the Syndicate, President of the Post-Graduate Council of Arts, Delegate to the Congresses of the Universities of the British Empire and the International Congress of Philosophy at the Harvard University. If in the course of my service here such coveted distinctions as the Hibbert Lectureship, an Oxford Chair, Fellowship of the British Academy and Fellowship of All Souls at Oxford came my way, the credit is due mainly to the facilities afforded and the encouragement given to me by the University authorities from the time of the great Sir Ashutosh Mookerjee who selected me for this post in 1920.

"The Benares Hindu University happens to be in a difficult position and I find that it is not possible for me to give to it from Calcutta the time and attention which it requires. At the earnest request of the Chancellor of the Benares Hindu University and Pandit Madan Mohan Malaviya which is supported by the Baroda Durbur, I wish to take up the newly founded Chair of Indian Culture and Civilisation, which, I hope, will enable me to serve that University more effectively.

"It is a compelling sense of duty that has reconciled me to this step, and I hope that the University authorities will appreciate my position. I have given the best part of my life to the University of Calcutta and the service of the people of Bengal and though my official connection with them may terminate in July, I may assure you that my love for them will endure."

Rai Khagendra Nath Mitter Bahadur in placing the letter of resignation moved that Sir S. Radhakrishnan be appointed *Emeritus* Professor of Mental and Moral Philosophy and recalled his connection with the University dating back 20 years and paid a warm tribute to the services rendered by him to the University.

Dr. W. A. Jenkins seconding the motion thought it his duty to give expression to his personal appreciation, as well of the Department of Public Instruction of the great service rendered by Sir Radhakrishnan to the education of the province. As a scholar Sir Radhakrishnan was well-known. This University owed a great deal to his inspiring leadership. He was a willing co-operator for the advancement of education in the province. Though he was leaving the province they hoped that the University would get the benefit of his advice from time to time.

Sir Azizul Huq, Vice-Chancellor, said that they in Bengal were proud of the fact that here in this University they could give place to a man of the type of Sir Radhakrishnan to help towards the intellectual development of the country. It was well known that this University was the first pioneer University and parent of other universities; not only that men from this province had gone across to other provinces and were pioneers in starting educational institutions in those provinces. They were proud of the fact that once more this University was sending another Sir Radhakrishnan to a sister university.

Sir S. Radhakrishnan expressed his thanks for the cordial appreciation of the little he had been able to do to the University. He assured that whatever he might be this University would be his first and greatest love.

UNIVERSITY APPOINTMENTS

At the Calcutta University Senate Meeting on Saturday last Dr. Hem Chandra Raychaudhuri was re-appointed Carmichael Professor of Ancient Indian History and Culture on a salary of Rs. 800 per month in the grade of Rs. 700—1,000 till he completes his sixtieth year.

Dr. Biresh Chandra Guha was re-appointed Ghose Professor of Applied Chemistry on a salary of Rs. 800 in the grade of Rs. 700—1,000 till he completes his sixtieth year.

The term of appointment of Mahamahopadhyay Professor Vidhusekhara Bhattacharyya as Ashutosh Professor of Sanskrit was extended for a further period of one year with effect from 1st June 1941.

THE GOVERNOR'S CONFERENCE

The following *communique* has been issued regarding the deliberations at the conference of party leaders in the Bengal Legislature held in Calcutta under the presidentship of His Excellency the Governor.

The conference resumed its session at Government House on Saturday last under the chairmanship of His Excellency the Governor, and in addition to its examination of some of the causes of communal discord in Bengal and the specific points of difference between the communities, considered the situation resulting from the recent developments of the war and the recent communal riots in Dacca city and district.

The conference desires to emphasize strongly the paramount need for maintaining unity between all classes and communities, particularly in view of the latest developments in the Near East. It urges upon all communities the desirability of putting aside all communal or sectarian prejudices which might be the cause of discord.

It was generally agreed that this Province should set an example by demonstrating in a practical manner her determination to sink communal differences in a desire to give whole-hearted support of her defence in face of the common danger.

CALCUTTA BLIND SCHOOL

The remarkable methods by which blind people are taught reading and writing, science, geography, and various other subjects were shown by masters and pupils of the Calcutta Blind School at an exhibition organized by them in Overtoun Hall, Calcutta, on Monday last.

Several stalls were erected and the students showed, how through scientific methods, they were able to read and write Braille, perform simple scientific experiments, make cane baskets and chairs and follow maps.

The exhibition was opened by Mr. Justice Biswas who congratulated the Calcutta Blind School on the great work being done by them and hoped that more such institutions would be opened in the near future.

The exhibition remained open on Tuesday last from 12 noon to 8 p.m.

POLICE COMMISSIONER'S WARNING

The assurance that any attempt to cause trouble in the city will be dealt with most drastically, is given by Mr. E. S. Fairweather, Commissioner of Police, Calcutta, in a statement issued to the Press.

Mr. Fairweather says: "A certain amount of anxiety has been expressed in various quarters in Calcutta owing to the prevalence of unfounded rumours. The Commissioner of Police, who is in close touch with every section of the populace, desires it to be clearly understood that there is not the slightest reason for any apprehension whatever. In all quarters there is a genuine desire for peace and if good sense prevails, as it has done so far, the people of Calcutta will reject all rumours with contempt. It would be of great assistance to

CIVIC NEWS FROM FAR AND NEAR

CAWNPORE MUNICIPAL BOARD

The Cawnpore Municipal Board has resolved to present a farewell address to Mr. S. C. Chatterji, M.L.A., who has resigned the Principalship of Christ Church College, Cawnpore, and is going to Gorakhpur as Principal of St. Andrew's College.

The resolution was signed by 18 Councillors, including members of the Moslem League and Congressmen.

"DEARNESS" ALLOWANCE

The Jamalpur Municipality have decided to grant a "dearness" allowance of one rupee a month to all scavengers in its employ. This will put the municipality to additional expenditure of about Rs. 4,000 in the year.

SUKKUR MUNICIPAL ELECTION

A piquant situation has arisen in the conduct of elections to the Sukkur Municipality under the joint electorate system and an ordinance is likely to be issued by the Sind Governor in a few days to hold elections on the scheduled date of May 5. The situation follows the filing of a civil suit by a voter to declare the electoral roll illegal on ground that it does not contain a number of voters possessing the necessary qualification acquired in the year 1941. The final roll which was prepared on the basis of the list of 1940 was published nine days after March 31, the last day for publication and a number of voters claimed inclusion in the list by virtue of their acquiring the necessary qualification in the new year. Such technical hitches have led to the filing of a suit in the court by a voter seeking to declare the list illegal.

It is held in Government legal circles that the promulgation of an ordinance is the only way to legalise the present voters' list.

It may be mentioned that Government had to negotiate a number of earlier obstacles including the filing by voters of over nine thousand applications and objections after the publication of the preliminary electoral roll which resulted in the failure of publication of the final list within the prescribed period.

The Moslem candidates who filed nominations for Sukkur Municipality elections, polling for which is fixed for May 5, have withdrawn their nominations from three wards in the city, it is understood, as a protest against the introduction of joint electorate.

Letters TO THE EDITOR

Notice to Correspondents

All contributions and correspondence should be addressed to the Editor, "Calcutta Municipal Gazette," Central Municipal Office, 5, Surendra Nath Banerji Road, Calcutta.

Letters and other contributions must always be written on one side of the paper only and signed by the writer. Their publication in the "Gazette" however, must not be taken to imply endorsement by the Corporation or by the Editor of any opinions that may be expressed in them.

Mss. and photographs sent for publication will not be returned unless they are accompanied by fully stamped and addressed covers.

All communications intended for publication in the "Gazette" must reach this office at least six days in advance of its next date of issue.

The Bustees

To The Editor, "Calcutta Municipal Gazette."

Sir,—I have suggested to the Chief Executive Officer that the following persons should be elected as co-opted members of the Executive Committee of the *Bustee*-owners' Association of Calcutta:

(1) The President of the Bustee Standing Committee of the Corporation of Calcutta;

(2) The Chairman of the Calcutta Improvement Trust;

(3) The Secretary of the Local Self-Government Department of the Government of Bengal.

As the Bustee Standing Committee of the Corporation of Calcutta is responsible for the improvement of *bustees*, it is desirable that the President of the said Committee should be a member of the *Bustee*-Owners' Committee.

It is one of the duties of the Calcutta Improvement Trust to acquire lands and erect sanitary buildings for the poorer classes, it is desirable that the Chairman of the said Trust should be a member of the *Bustee*-Owners' Committee.

As the financial condition of the Corporation of Calcutta is satisfactory and as a heavy amount of loan must be raised to acquire unhealthy *bustees* and make the necessary improvements therein at heavy costs, it is desirable that the Government of Bengal should make material contribution towards the cost of the said improvements and the Secretary of the Local Self-Government Department should, therefore, have voice in the deliberations of the *Bustee*-Owners' Committee.—Yours etc.

A. D. ADDY.

Calcutta Associations & Institutions

BOYS' OWN CLUB

Anniversary Meeting.

The fourth anniversary of the Boys' Own Club was held at the Club grounds at Bijoli Dutt Lane on April 19, Kumar Bimal Chandra Singh Bahadur *M.L.*, presiding.

The President on arrival was received by a guard of honour. After the hoisting of the National flag by the Kumar Bahadur, *Vande Mataram* was sung, all standing. The Secretary then read out his annual report in which he gave a brief account of his club, which claims to have met a demand of the locality. The members of the Club then showed various physical feats including comic sketch and a musical *soiree* by the girl members. Messrs. Netai Charan Paul and Fakir Chandra Ghose, Councillors, Ward No. 31 and President and Vice-President respectively of the Club took keen interest in the various performances. The function terminated after the gentlemen present had been treated to light refreshment.

KARADATRI SANGHA

Annual General Meeting.

The seventeenth Annual General Meeting of the Karadatri Sangha was held under the presidency of Mr. Krishna Lal Banerjee, Advocate at 11, Hari Bose Lane, the central office of the Sangha on the 27th April. The Secretary Mr. Haro Prosad Majumdar read the Annual report and the audited statement of Accounts which were adopted. After its adoption the Executive Committee was formed with the following members.

President:—Dr. Sashi Kumar Sen Gupta.—*Vice-Presidents*:—(1) Messrs. Hrydoy Bhusan Gupta, (2) Panchugopal Bhattacharjee, (3) Nirmal Chandra De, (4) Dulal Chandra Mitra, and (5) Suresh Chandra Laha.—*Secretary*:—Mr. Haro Prosad Majumdar.—*Assistant Secretary*:—Messrs. Jitendra Krishna Barat, (2) Manmatha Nath Bhattacharjee, (3) Himansu Ranjan Ghosh (4) Sukumar Roy.—*Treasurer*:—Mr. Manohar Sarkar.—*Members*:—(1) Messrs. Ananta Charan Brattacharjee, (2) Abhoyapada Mukherjee, (3) Dr. Bankim Chandra Mukherjee, (4) Messrs. Bhudeb Bhusan Lahiri, (5) Birendra Nath Mucherjee, (6) Chandra Sekhar Gupta (7) Dr. Debipada Banerjee, (8) Messrs. Dwijendra Lal Bhadury, (9) Girindra Nath Ghosh, (10) Gopal Chandra Bhattacharjee, (11) Jogendra Nath Mandal, (12) Krishna Lal Banerjee (13) Manranjan Das Gupta, (14) Narendra Nath Chowdhury, (15)

Nimai Chand Dutt, (16) Niroj Baran Mukherjee, (17) Panchkari Bhattacharjee, (18) Prokash Chandra Sett, (19) Promotho Nath Mukherjee, (20) Dr. Probodh Chandra Roy, (21) Messrs. Pravash Chandra Dutt, (22) Prasanta Kumar Gupta, (23) Prof. Satish Chandra Ghosh, (24) Pandit Srish Chandra Vedantabhusan, and (25) Mr. Sudhir Chandra Roy Chowdhury. *Auditor* :—Mr. C. R. Sen.

BENGAL WRESTLING CHAMPIONSHIP

Prize Distribution Ceremony

The Bengal Wrestling Tournament organised by the Simla Byayam Samity of Calcutta was opened and presided by Mr. J. C. Mukerjea, Chief Executive Officer, Calcutta Corporation, on Sunday, the 23rd March, 1941.

Mr. Dwijendra Nath Bagchi and Major P. K. Gupta acted as Judges and Mr. Biren Bose as a referee. Messrs. D. N. Guin, Paritosh Bose and Kaviraj Satyabrata Sen, acted as Time-Keepers. Doctors Sudhir K. Ghose, Rabin Bose, Sailen Majumder, Hemen Dutt, B. M. Chatterji, Haridas Das, and Netai Sarkar were the medical officers.

The prize distribution ceremony was held on Sunday, the 30th March, 1941. Mr. J. N. Basu, presided and Sir Hari Sanker Paul distributed the prizes :—

Heavy Group :—Winner—Manick Goho (Gobar's Gymnasium) : Runners-up—Murari Bose (Simla Byayam Samity).

12 *Stones Group* :—Winner—Bhawani Ghose (Gobar's Gymnasium) and Dasurati Paul (Gobar's Gymnasium) ; Runners-up Sham Bhar (Simla Byayam Samity).

10 *Stones Group* :—Winner—Susil Ghose (Ghose's College) ; Runners-up—Krishna Banerji (Simla Byayam Samity).

9 *Stones Group* :—Winner—Narayan Dutt (Jorabagan Byayam Samity) : Runners-up—Mukul Dutt (Jorabagan Byayam Samity).

8 *Stones Group* :—Winner—Chandi Das (Jorabagan Byayam Samity) ; Runners-up—Balai Mitter (Simla Byayam Samity).

7 *Stones Group* :—Winner—Balai Dey (Ahiritola Tarun Sangha) : Runners-up—Baidyanath Ghose (Maruti Byayam Vidyalaya).

Best Physique—Winner—Bimal Sarcar (Chetla Sangha).

Club Championship :—Winner—Gobar's Gymnasium.

Best fighters among the loosers :—

7 *Stones Group* :—Sukhlal Kundu (Simla Byayam Samity).

8 *Stones Group* :—Ram Dey (Simla Byayam Samity) ; Bimal Sarcar (Chetla Sangha) and Satish Das (Ashram Gymnasium).

9 *Stones Group* :—Rajani Chatterji (Dutt Gymnasium).

10 *Stones Group* :—Jahar Goho (Gobar's Gymnasium).

12 *Stones Group* :—Anadi Ghose (Gobar's Gymnasium).

PANCHANANTOLA SPORTING CLUB

Annual General Meeting

The eleventh annual general meeting of the Panchanantola Sporting Club (Bow Bazar) was held on the 11th April, at 5 p.m. under the presidentship of Sj. Nagendra Nath Sil in the house of late Mr. Upendra Nath Sil, 20, Panchnantola Lane, Calcutta. The annual report and the account for the year 1940-41, were read and adopted. The following gentlemen were elected as office bearers and members of the Executive Committee for the year 1941-42.

Patrons :—Dr. Kumar Narendra Nath Law, Messrs. Umesh Chandra Sil, Jagannath Kolay, (*Councillor*), Indu Bhusan Mullick, Kanailal Marick and Nagendra Nath Sil.—*President* :—Kumar Birendra Kishore Roy Chowdhury. *Vice-Presidents* :—Messrs. Brojoranjan Roy Pepin Behari Ganguly, (Councillor), Sidheswar Dutt Patit Paban Sil, Wodhub Chandra Mullick, and Bepin Behari Sil.—*Joint Hony. Secretaries* :—Messrs. Abhoy Pada Sil, Biswa Nath Chandra.—*Hony. Treasurer* :—Mr. Rup Chand Sil.—*Executive Committee* :—Messrs. Paresh Nath Sil (Sr.), Paresh Nath Sil (Jr.), Sadhan Kumar Banerjee Nabu Kumar Naundy, Raghu Nath Sil, Baidya Nath Dutt and Mr. Sanaton Sil.—*Secretary* (In-door games) :—Mr. Baidya Nath Dutt—*Football Committee* :—Messrs. Sowrendra Nath Ghosh, (Secretary) Loke Nath Sil, (Captain), and Biswa Nath Dhar, (Vice-Captain).—*Badminton Secretary* :—Kamala Kanta Sil.—*Secretary* (*Social and Recreation*) :—Mr. Paresh Nath Sil (Jr.).—*Hony. Auditor* :—Mr. Satya Charan Sil.

YOUNG MEN'S ASSOCIATION

Annual General Meeting

The following office-bearers for 1941 were elected by the members of the Young Men's Association at their general meeting held on 30th March, 1941 :—

President—Mr. S. K. Roy Choudhury. *Vice-Presidents*—Dr. H. Banerjee and Mr. J. K. Bose. *Treasurer*—Mr. N. R. Ghosh.—*Accountant*—Mr. G. P. Roy.—*Secretary*—Mr. B. K. Ghosal.—*Assistant Secretaries*—Messrs. S. S. Sinha and U. Mitra—*In Charge, Free Reading Room*—Mr. D. N. Dey.—*Executive Committee*—Messrs. S. K. Das Ghosh, N. N. Dey, K. P. Ghosh, A. K. Mittra, H. N. Dutta, B. B. Banerjee and S. K. Roy Choudhury.

SOUTH CALCUTTA PEOPLE'S ASSOCIATION.

Annual General Meeting

The third annual general meeting of the South Calcutta People's Association was held on the 12th April, 1941, at the Dilkhusa Institute Hall with Khan Sahib Md. Mohsin Khan in the chair. After recitations from the Holy Quoran and Bengali songs, Dr. Noor Ahmed, the Secretary of the Association read out the annual report. Captain P. K. Sen-Gupta, Messrs. M. A. Nesar and Abdul Hamid B.L., explained the necessity of the Association with eloquent speeches. A resolution, that any gentleman who will contribute a lump sum of Rs. 100 at a time will be declared as 'patron' of the Association subject to the approval of the Executive Committee, was adopted by the House. Then the following members were elected as office-bearers for 1941-42 :—

President :—Mr. J. C. Gupta. *Vice-Presidents* :—Khan Sahib Md. Mohsin Khan (Councillor), Capt. P. K. Sen-Gupta, Messrs. Rafiuddin Ahmed, Golam Surwar and Md. Ayub Baker.—*Secretary* :—Dr. Noor Ahmed.—*Assistant Secretaries* :—Messrs. M. A. Nesar, Jagath Kumar Biswas and Hajee Azizur Rahman.—*Treasurer* :—Mr. Kiamuddin Khan.—*Executive Committee* :—Messrs. M. M. Haque, Md. Khalil, Abdul Hamid, Md. Ali Bhuia, U. Modabbar, Abed Hossain, S. C. Sen, Golam Rahman, Shirajuddin Ahmed, Dr. S. M. Yakub Hasan, Munshi Reazuddin Ahmed and Dr. Abdul Aziz.

Legal Intelligence

Re-Appointment Of Mr. J. C. Mukerjea As Chief Executive Officer

High Court Judgment Rejecting "Ad Interim" Injunction Petition

(*Before Mr. Justice Panckridge*)

Manindra Nath Banerjee and another

vs.

Jyotish Chandra Mukerjea and another.

MR. Justice Panckridge delivered judgement on Monday last (April 28,) dismissing the application of the plaintiffs, Manindra Nath Banerjee, barrister and rate-payer, and Satish Chandra Bose, barrister and councillor, for a temporary injunction restraining defendants, the Corporation of Calcutta and Mr. J. C. Mukerjea from acting in pursuance of a resolution purported to have been passed on March 31 last and from taking any steps in furtherance thereof or given effect thereto, until the final disposal of the suit.

By this resolution in question Mr. J. C. Mukerjea was purported to have been appointed Chief Executive Officer of the Calcutta Corporation from April 1 last until a proper meeting could be called to submit a fresh proposal to the Government.

The *interim* injunction sought in this application was in the same terms as the perpetual injunction which formed the only substantive relief prayed for in the plaint.

Delivering judgment his lordship said that the plaintiffs purported to sue on behalf of themselves and other rate payers of the Corporation of Calcutta. The defendant Mr. J. C. Mukerjea was admittedly the Chief Executive Officer of the Corporation until March 31, 1941.

His lordship continued that the post of the Chief Executive Officer was the creation of the Calcutta Municipal Act, 1923, and the provisions for this appointment were contained in section 51 (1) of the Act, in terms of which the appointment was subject to the approval of the local Government. Defendant Mr. Mukerjea was first appointed

A CORRECTION

Please read "High Court" in place of "House" in the opening line of the report of this case on page 801 *of the last issue* (26*th April*) *of the "Municipal Gagette."*

Officiating Chief Executive Officer on December 15, 1924, and he obtained his first substantive appointment on May 17, 1927. Thereafter he was re-appointed from time to time and the term of his last appointment was due to expire on March 31, 1941. On February 28, 1941, the Corporation passed a resolution reappointing Mr. Mukerjea Chief Executive Officer for two years from April 1, 1941. On March 31, 1941, the Secretary to the Government of Bengal in the Public Health and Local Self-government Departments informed the Corporation by a letter that Government were unable to approve of the re-appointment. On March 22, 1941, the Corporation passed a resolution requesting Government to reconsider their decision, refusing to approve the appointment of Mr. Mukerjea in terms of the resolution of February 28, and on March 29, Government informed the Corporation that they had considered the request to revise the decision which they regretted they were unable to accede. Defendant Mr. Mukerjea stated that Government letter of March 29, 1941, was delivered, after the Corporation offices were closed, and he received it in his residence at about 7-30 p.m. on the evening of that day.

His lordship then referred to the statutory provisions as to the meetings of the Corporation and to the 48 hours' notice required under Section 60 of the Act. This section provided *inter alia* that no business should be brought before or transacted at any meeting other than the business of which notice had been given, provided that any Councillor might move a resolution beyond matters of which notice had been given by leaving a copy of such resolution at the municipal office 48 hours' before such meeting.

Requisition Meetings

His lordship observed that on March 31 last a number of requisition meetings had been convened and a list of business had been circulated in a conformity with the provisions of Section 60. Neither in the requisitions nor in the circulated list was there any reference to the reappointment of the Chief Executive Officer. It was also beyond dispute that no notice of resolution beyond matters mentioned in the notices given at the meetings had been given by any Councillor or Alderman under the proviso to Section 60. However at the conclusion of the business to be transacted at the last meeting the Mayor who had just returned from a conference with the Chief Minister and the Minister for Public Health and Local Self-government was asked as to the result of the conference. He made a statement to the effect that a deadlock had been created because whereas the ministers had intimated that the Government was willing to sanction reappointment for a further period of 15 months, defendant Mr. Mukerjea was not prepared to consider less than 18 months. While the matter was being discussed on the basis of the information furnished by the Mayor, defendant Mr. Mukerjea intervened and was recorded to have said *inter alia* that in deference to the wishes of the leaders of the different sections of the House he had decided to agree to the appointment for 15 months. After further debate one of the Councillors, Mr. W. A. Burns moved the following resolution :—"That in the present emergency and in face of the legal *impasse* Mr. J. C. Mukerjea do continue to act as Chief Executive Officer subject to the powers delegated to him and by him re-delegated to the officers, until a proper meeting can be called to submit a fresh proposal to the Government."

His lordship observed that this resolution was eventually carried by 39 votes to 23. Two members present abstained. This was the resolution on which defendant Mr. Mukerjea professed to discharge his duties, and the validity of which was challenged in this application. His lordship also referred to the fact that certain Councillors and rate-payers were added as defendants after this application was made.

His lordship said that as he was not granting a temporary injunction, it was desirable that his lordship should be as brief as possible. His lordship thought, however, that he should say that the case of the plaintiffs was a fairly strong one as to the legality of the resolution It could not be argued that the provisions of sction 60 had been observed, and though this defect might possibly not be fatal, had it chanced that all Councillors were present at the meeting of March 31 last, this condition was admittedly not

satisfied. His lordship might also state, as at present advised, his lordship was not impressed by the submissions of the defendants that the provisions of section 60 were not mandatory but directory, nor by the submissions that these proceedings could be validated under Section 79(2) of the Act, if at the next meeting of the Corporation, the Mayor acted under Section 76 and signed the Minutes of March 31 last. Moreover, his lordship did not attach much importance to the fact that the advertisement under O. I. r. 8 of C. P. C. had not been issued when the application was moved.

Specific Relief Act

There was possibly more substance in the argument that under Section 3 of the Specific Relief Act, the grant of a temporary injunction was to be regulated by the Civil Procedure Code and that the plaintiffs had neither alleged nor proved injury of any kind within the meaning of O. 39. r. 2 (1).

However, his lordship's reason for refusing the temporary injunction was a practical one and it was that there was every expectation that the situation would shortly be altered in such a way as would necessitate the discharge of any order his lordship might make. As his lordship had already stated both the Chief Minister and the minister directly concerned had intimated that Government of Bengal were willing to approve of Mr. Mukerjea's reappointment for 15 months and defendant Mr. Mukerjea had publicly informed the Corporation that he was willing to accept reappointment on these terms. Moreover, on April 21 last, 18 Councillors gave notice to the Secretary of the Corporation of a resolution to be moved at a meeting fixed for April 28, after the election of the Mayor and the Deputy Mayor. The resolution was in this form :—"That the resolutions of the Corporation dated February 28, 1941 and March 22, 1941, whereby Mr. J. C. Mukerjea was reappointed Chief Executive Officer of the Corporation be reaffirmed and that in view of the settlement which was arrived at with the Government on March 31, 1941, the term of his office be fixed at 15 months from April 1, 1941."

His lordship remarked that the form of the resolution might be open to criticism. Broadly speaking, it was reasonably clear that as between defendant Mr. Mukerjea. Government and the various representatives of the Corporation there was a species of gentlemen's agreement on Mr. Mukerjea's part to accept and on the part of the Government to sanction reappointment for a period of 15 months. This of course did not bind the general body of Councillors and Aldermen, but his lordship had no reason to suppose that the majority would not support the resolution that was to be moved.

Suggested Deadlock

As regards the suggested deadlock should an injunction be granted his lordship thought there was exaggeration on both sides. His lordship did not suppose that the work of the Corporation would be brought to complete standstill, but at the same time it seemed likely that there would be quite an appreciable amount of inconvenience and disorganisation. It had not been suggested that a single rate-payer would be any the worse if the present state of things was allowed to continue.

The position therefore with which his lordship had to deal when arguments were closed on April 22 last was whether his lordship would be justified, assuming the illegality of the resolution of March 31, and of the irregularity of defendant Mr. Mukerjea's position since that date, in issuing a temporary injunction to remedy a situation which his lordship had every reason to believe would be put right in about a week's time. His lordship came to the conclusion that the circumstances did not call for the remedy asked for. His lordship accordingly dismissed the application.

Mr. Sarat Bose, Mr. P. C. Basu and Mr. P. B. Mukerjee appeared for the plaintiffs; Mr. S. N. Banerjee (Senior) and Mr. S. B. Sinha for defendant Mukerjea; Sir A. K. Roy (Advocate-General) and Mr. S. B. Sinha for defendant Corporation; Mr. Surita and Mr. B. C. Ghose for added defendant councillors; Mr. Clough for added defendant-ratepayers

THE Improvement Trust

(I)

The following extracts are taken from the Proceedings of the Calcutta Improvement Trust, held on Saturday, the 8th March, 1941.

Present.—Mr. C. W. Gurner, C.S.I., I.C.S., *Chairman;* Mr. J. C. Mukerjea, *Chief Executive Officer, Corporation of Calcutta;* Mr. Abdur Rahman Siddiqi; Rai Sahib Chandan Mul Karnani; Mr. A. J. Thompson; Mrs. Hasina Murshed; Mr. Md. Rafique; Mr. F. Rooney; Sir Hari Sanker Paul, Kt.

Accident In The Lift

The Board considered Government letter No. 358M, dated the 26th February, 1941, about the accident in the lift in November, 1940, and *resolved* that a copy of the letter should be forwarded to the South British Insurance Company, with the observation that the Board would be glad if the lift could be thoroughly examined and any defects found, made good.

Referred To The Corporation

The Board considered the Chief Valuer's note of the 4th March, 1941, regarding the abandonment of Alignment No. XXXIV (area between Lansdowne Road and Ballygunge Circular Road), and *resolved* that the proposal should be referred to the Calcutta Corporation for their views.

Howrah Bridge Approach

The Board considered the Chief Engineer's note of the 1st March, 1941, regarding the small island laid out near Lyons Range, in Scheme No. XLV (Howrah Bridge Approach—from Dalhousie Square North to Canning Street), and *approved* of the proposal that the island should be included in the roadway and the footpath adjusted to a uniform width of 12 ft., subject to any small variation necessary to ease off the angle in the footpath at the southern corner of the island.

Sashibhusan Dey Street

Sanction was *accorded* to an estimate amounting to Rs. 11,068 forwarded by the District Engineer, District No II, Calcutta Corporation, for paving with 2-inch thick asphalt the roadway of Sashi Bhusan De Street, in Scheme No. XXII.

(II)

The following extracts are taken from the Proceedings of the Calcutta Improvement Trust, held on Saturday, the 22nd March, 1941 :—

Present :—Mr. C. W. Gurner, C.S.I., I.C.S., *Chairman*: Mr. Abdur Rahman Siddiqi, Rai Sahib Chandan Mul Karnani, Mrs. Hasina Murshed, Mr. J. J. N. Birch, Mr. Md. Rafique, Mr. F. Rooney, Sir Hari Sanker Paul, Kt.

Swimming Pool In Lake Club

The Board considered letter No. L.6/1, dated the 6th February, 1941, from Messrs. Ballardie Thompson and Matthews, regarding the proposed swimming pool for the Lake Club in the Dhakuria Lake and *resolved* that the plans and elevation of the building be approved provided it is erected entirely north of the line A-B in the site recently allotted to the Club and that there is no building south of this line. They further *resolved* that water may be drawn from the Lake on payment of a fee of Re. 1 per mensem, subject to the understanding that the Trust accept no responsibility for the purity of the water, and that the intake is so fixed, screened and controlled as to avoid any damage to the banks or interference with boating or destruction of fish and be approved by the Chief Engineer.

Concrete Shelters

Sanction was *accorded* to an estimate amounting to Rs 5,600 for the construction of two reinforced concrete shelters within the park in Cossipore-Chitpore Open Space.

Plans For Buiedings

How They Should Be Drawn

CITY ARCHITECT'S DEPARTMENT :
Calcutta, the 3rd April, 1941

Directions under Rule 58, *Schedule XVII, Calcutta Municipal Act,* 1923, *as to how all plans for submission at the City Architect's Department, Central Municipal Offices, Calcutta, should be drawn.*

General

Plans not clearly printed and distinctly coloured, not easy to read, shall be refused by the Department.

(1) All sheets of drawing in any one set of drawings should be of the same size and quality of paper.

(2) All drawings, except the elevation where such is necessary or called for by the Department should be on same kind of thick tough plain white or light coloured paper, and thin lines should be cleanly and boldly drawn, maintaining due distinction between the important and unimportant lines.

(3) Each item of drawing should be separated from any other on the same sheet by three inches of clear space, although a wider separation may not be deemed objectionable.

(4) The site plan should clearly indicate the boundaries of the site, should be submitted with each set of drawings, and it is desirable that the scale used should be "1 inch equals 50 feet" in all cases, in order to maintain the uniformity. Unless this site plan happens to be very extensive, it should be placed in the same sheet as the "existing" or "proposed" ground floor plan. All structures and streets etc., falling within 40 ft. from the boundaries of the proposed site, should be clearly indicated and open and covered spaces in the adjoining sites should be correctly shown, according to the prevailing practice.

(5) Any plan with any kind of corrections in ink or pencil shall not be accepted by the department for the issue of a formal sanction although it may be either for the departmental use or for the use of the Buildings Committee or Committees. The formal sanction can, under no circumstances, be issued on plan not conforming to all the directions given herein.

(6) All drawings will be accepted to have been drawn correct to scale but figures mentioned on the plan will be taken as final, in all cases of dispute, though the scale may give another figure.

Encroachment Plan

Any involving encroachments under and/or over Corporation land, include a separate set of four copies of "encroachment plan" indicating the outline of the proposed building and the extents of encroachments.

Floor Plans

(1) All floor plans should be drawn to the scale of "1 inch equals 1 foot", and should be submitted in one or more sheets if necessary, rendered in standard colours (Pencils should not be used for drawing or for rendering them in colour).

(2) The direction of the plans should be maintained the same throughout the scheme, when placed in one and the same sheet. The site plan, if placed on the same sheet, should be made to maintain the same direction, shown clearly by a compass-point indicator.

(3) The top of the sheet should indicate the north—otherwise, a compass-point indicator should be given by the side of the proposed ground floor plan, and in the latter case, the bottom of the paper should indicate the principal road frontage.

(4) All dimensions should be clearly indicated on each plan, including proposed or existing foundation of other type of encroachments, and proposed free-gifts of land or any land intended to be thrown into common passage, wherever they may occur.

(5) It is advisable that main entrance should be marked with a heavy arrowhead and all indoor means of communications should be followed up with a bold line in contrasting colour.

(6) Plans for proposals of sanitary blocks should be submitted in the scale of "½ inch equals 1 foot."

(7) Openings in each floor of the adjoining premises within 6 feet from the proposed scheme in every necessary direction should be clearly indicated in the corresponding floor plans of the proposed scheme.

(8) All ground floor plans should show all the adjoining covered and open spaces within ten feet (10 ft.) of the boundaries of the site of the proposal, and in cases where attachment is proposed, the measurement of the attached portion of the adjoining building against which attachment is proposed, should be given, with all openings on the attached side clearly indicated in their correct positions and with correct dimensions.

Sections

(1) At least two Sections,—longitudinal and cross Sections, should be given with each scheme, and these should be so selected as to pass unbroken through all courtyard and staircases.

(2) All sections should give a clear idea of the open spaces provided in each scheme, with reference to the adjoining heights of the various parts of the proposed Building.

(3) If the longitudinal or the cross Section do not happen to pass through the Sanitary block or blocks in the scheme, a separate section designated Section A A, on the plan should be furnished.

(4) Two flags at the two ends of each section line should indicate the direction in which to look, at the section line, as shown below :—

(5) All levels in the Sections should be clearly indicated by G. L. (ground level). P. L. (plinth level), etc., and all vertical dimensions, such as floor and roof thickness, should be clearly mentioned.

(6) All portions in actual Section—assuming all doors and windows to be wide open—should be drawn in a continuous heavy line, and all other important features should be drawn in as in elevation, in thin lines.

(7) All sections should indicate the walls beyond in elevation and all openings, etc., in such walls, therefore should be correctly shown.

(8) Essential points should be well indicated, wherever possible, by sections as well as plans.

ELEVATIONS

(1) The front elevation or the facade of the proposed building should preferably be submitted in a separate sheet with proper indication of the three dimensional structure by means of the thick and thin lines and shadows.

(2) All fenestrations should be indicatd true to scale, but the details of the architectural decorative features should not be entered into the scale of "$\frac{1}{8}$ inch equals 1 foot".

(3) In the case of elevations, involving supported or projected verandahs, hoods, cornices etc., the level of the existing verandahs, railings parapets, hoods, cornices, etc., of the adjoining buildings on either side of the proposed structure, should be clearly indicated by horizontal lines, and the heights of all such levels duly indicated by the necessary figures.

(4) Elevations should indicate the levels of the floor heights of the adjoining buildings on either side.

(5) Any colour scheme proposed for the building should be clearly indicated on the Elevation in their approximate relative shades.

NOTICE

To The Petty Improvement Contractors,
District No. III, Engineer's Department.

District Engineer III.

District III Engineering Office.
The 30th April, 1941.

VITAL STATISTICS

For the City of Calcutta for the week ending 26th April, 1941.

CITY OF CALCUTTA (TOWN & SUBURBS)

The total number of deaths registered during the week was 901 against 902 and 997 in the two preceding weeks and higher than the corresponding week of the last year by 176. The general death-rate of the week was 41·1 per mille against the 32·9 the mean of the last five years.

Town (Wards 1—25 and 27.)

The number of deaths registered during the week ending 26th April, 1941, was 788 against 762 and 847 in the two preceding weeks. There were 143 deaths from cholera against 117 and 91 in the two preceding weeks. There were 169 deaths from small-pox during the week against 156, in the previous week. There was 1 death from influenza against 3 in the previous week. The mortality from fevers and bowel-complaints amounted to 23 and 93 respectively against 29 and 91 in the preceding week. The general death-rate of the week was 41·0 per mille per annum.

There were 37 imported deaths. Excluding these, the death-rate of the Town was 39·1.

There were 90 deaths from respiratory diseases against 77 in the previous week.

There were 53 deaths from tuberculosis against 65 in the previous week.

There were 153 deaths of infants under one year.

Suburbs (Wards 28—32)

The number of deaths registered was 113 against 140 and 150 in the two preceding weeks. Of these 8 were from cholera, 31 from small-pox, 1 from influenza, 6 from fevers, 14 from bowel-complaints and 13 from respiratory diseases. The death-rate of the suburbs (or added areas) was 41·3 per mille.

There were 6 imported deaths. Excluding these, the death rate was 39·1.

There were 7 deaths from tuberculosis against 18 in the previous week.

There were 26 deaths of infants under one year.

DRAINAGE DEPARTMENT

TO ALL P. I. CONTRACTORS, DISTRICT III AND DHAPPA

Re. Repairing the North Bund of the Pucca Channel on the East of the Chawbaga Bridge

Dear Sirs,

Please submit your tender in the prescribed tender form for the petty improvement works of the Corporation for the above work, the details of which can be obtained from the department. The tender in a sealed cover, endorsed as above will be received by me on the 15th May, 1941, at 12 noon.

The work is to be completed within 15 days from the date of order to take up the work in hand.

Yours faithfully,
P. C. BOSE,
Executive Engineer,
Drainage.

The 10th February, 1940.

CORPORATION NOTICES

To Contractors

Tenders are invited in duplicate for the following and will be received by the First Deputy Executive Officer on the date noted for each, up to 2 p.m. Each tender in duplicate must be enclosed in a sealed cover and superscribed—"Tender for....." For specifications and tender forms apply to the Keeper of Records between 11 a.m. and 3 p.m. on week days and 11 a.m. and 1 p.m. on Saturdays. Price Rs. 2 per set.

1. Construction of a building for Primary School at Ibrahim Road.

2. Construction of a building for Primary School at Samsul Huda Road.

3. Construction of a building for Primary School at Dilkhusa Street.

4. Construction of a building for Primary School at Harish Mukherjee Street.

5. Cutting and restoring trenches in public roads for laying water mains during 1941-42.

6. Supply of kerb and channel stones during 1941-42.

7. Supply of stone-sets during 1941-42

8. Supply and delivery of 4 miles 16 lbs. rail, 2 ft. gauge, tipping wagons, cast steel wheels, etc., at Pulta Pumping Station.

9. Removal of the Refuse Platform from its present site at Chingrihatta to Dhappa Emergency Area.

Tenders for 1 to 4 will be opened on 6th May, for 5 on 7th May, for 6 and 7 on 8th May, and 8 and 9 on 13th May, 1941. The rates quoted in tenders for the above are to hold good for three months.

N.B.—All cases of delay over a fortnight in the execution of agreements in respect of works and supply of materials will be reported to the Committee and the parties will not be allowed to execute the agreements after that period without obtaining orders of the Committee.

In case a party deposits earnest money by cheque, he must deposit the cheque at least three working days before the date of opening of the tender.

The contractors should maintain an uniformity of their names and styles of business, appearing on various documents, *e.g.*, Treasurer's receipts, tender forms, agreements, licenses and bills.

Any deviation from this on the part of any contractor whenever detected, will render his tender liable for cancellation.

Where tenders are submitted by a Corporation, it should be signed by a principal officer of the Corporation or by an agent duly authorised in that behalf and be attested by a witness. Where it is submitted by a firm, it should be signed by the proprietor or one of the partners or by an agent duly authorised in that behalf by the firm and be similarly attested.

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 30th April, 1941.

Time Extended.

Re : Registration of names as contractors for Petty Plumbing and Petty Improvement Works for the year 1941-42.

The date for receiving applications for registration of names as contractors for the following has further been extended. The applications for them will be received by the Second Deputy Executive Officer upto 2 p.m. on the 31st May, 1941, instead of on 22nd April, 1941, as previously advertised.

(1) Petty Plumbing and House Drainage Works of the Corporation for the year 1941-42.

(2) Petty Improvement Works (other than petty plumbing and house drainage works) of the Corporation for the year 1941-42

BHASKAR MUKERJI,
Secretary to the Corporation.

Central Municipal Office,
The 16th April, 1941.

Central Municipal Office,
The 28th April, 1941

Notice to Rate-payers.

The attention of the rate payers is invited to the provisions of Section 145 of the Calcutta Municipal Act of 1923 regarding obligation to give notice of transfer of title in land or building

The Section runs as follows :

"145 Whenever the title in any land or building, or in any part or share of any land or building, is transferred, the transferee shall, within three months after the execution of the instrument of transfer, or, if no such instrument be executed, after the transfer is effected, give notice in writing of such transfer to the Executive Officer

Provided that in the event of the death of the person in whom such title vests, the person to whom, as heir or otherwise, the title of the deceased is transferred by descent or devise, shall within one year from the death of the deceased notice in writing of such transfer to the Executive Officer".

Their attention is further drawn to the penalties prescribed under Section 488 of the Act, for non-compliance with the provisions of Section 145. It may be noted that a fine of Rs. 25 may be imposed for failure to give timely notice of such transfer and a daily fine amounting to Rs. 5 may also at the discretion of the Court be imposed.

J. C. MUKERJEA
Chief Executive Officer

Central Municipal Office,
The 26th April, 1941.

Purchase of Fats and Guts.

Offers in sealed covers and superscribed "Offers for the purchase of guts are invited and will be received by the 2nd Deputy Executive Officer upto 2 p.m. of 14th May, 1941, for the privilege of purchasing guts from the butchers within Bhowanipore, Chitpore, Halshibagan and Tangra Slaughter Houses for the year 1941-42. A lump sum of Rs. 1,000 has been fixed for the said privilege for the whole period or any part thereof. The lump sum fee must be paid to the Corporation in advance within a week from the date of intimation of acceptance of offer by each successful tenderer. The approved tenderers shall carry on the business in one of the four rooms of Tangra Slaughter House to be alloted to each of them. For further particulars and conditions of license, apply to the Health Officer of the Corporation at the Central Municipal Office

BHASKAR MUKERJI
Secretary to the Corporation

MARKET NOTICES.

1. It is recommended that coolies should be paid at the following rates :—

10 Minutes—Two pice. ½ Hour—One anna. 1 Hour—Two annas.

Every succeeding hour or part of an hour—One anna.

2. Coolies for carrying bazar purchases are obtainable at all the principal entrances and care should be taken that only coolies bearing number badges are engaged. For the current half-year "A" class coolies have been allowed a Khaki coat with Red numbers on a Blue Black badge. "B" class coolies of Hogg Market have Rectangular brass number badges. Entally Market licensed coolies have Semi-circular brass arm badges

3. Any complaints about coolies should be made at the Superintendent's Office, giving the number of the cooly.

4. All complaints relating to the conduct of vendors should be made to the Superintendent. No action can be taken where the articles in dispute have been removed from the shop premises or in regard to transactions which are not brought to the notice of the Superintendent at the time of occurrence.

5. To avoid conflicts of statements both as regards the goods purchased and the nature of the sales, customers are requested to insist on getting a voucher, as far as practicable.

6. If goods are taken "on approval," customers are recommended to obtain a voucher to that effect stating the price paid.

7. Any articles lost or found in the market should be reported at the Superintendent's Office.

8. No dogs, bicycles, tricycles or perambulators are allowed inside the market.

9. For the convenience of the public a stand is provided at the south-west corner where the visitors can keep their bicycles in charge of the lessee thereof on payment of a fee of 0-1-0 for a Bicycle and 0-2-0 for Motor Cycle, the Corporation not having any liability in this connection.

10. Customers are requested that if they suspect any weight used by any vendor of the market to be short, they will bring the matter immediately to the notice of the Superintendent when the weight will be duly tested in the Office and the vendor punished if it is found short.

11. The public and the shop-keepers of the market are requested to assist in the mitigation of the beggar-nuisance by refraining from giving alms of any description within the market.

12. Customers are requested to examine the coins, obtained in the course of transaction, before they leave the shop. Ordinarily no action can be taken against the shop-keeper if any spurious coin is alleged to have been detected after they leave the shop.
